Environmental Management Department  
County of El Dorado  
330 Fair Lane  
Placerville, California 95667

Regarding: **Solid Waste Rate and Service Study – Final Report**

Dear Ms. Silva:

NewPoint Group, Inc. is pleased to provide the County of El Dorado (County) with our final report for the above referenced study. This report includes nine (9) report sections, and three (3) appendices. “County” references throughout the report are for the unincorporated areas franchised by the County and do not include Cameron Park and El Dorado Hills as they are under separate non-County franchises.

This August 5, 2008, final report follows from our June 10, 2008, draft report submittal. As we collected primary data at various times throughout this study, the data we collected and presented in this report was as of a point in time significantly before the August 5, 2008 final report date (e.g., as of January 2008 for surveyed rates of comparative jurisdictions).

In this letter we provide an executive summary for our report. Below we summarize our key study findings and recommendations by grouped areas that correspond to report sections.

This executive summary is organized as follows:

- A. Introduction and Background for Study*
- B. Solid Waste Rates and Service Levels Including Comparisons Between the County and Selected Jurisdictions*
- C. Solid Waste Franchise Fees, Including Comparisons Between the County and Selected Jurisdictions*
- D. Solid Waste Services Profitability Level and Waste Management Industry Standards, Including Comparisons Between the County and Selected Jurisdictions*
- E. Franchise Agreement Valuations for County Solid Waste Services*
- F. Franchise Agreement Options for County Solid Waste Services*
- G. Recommendations for County Solid Waste Management, Rates, and Service Levels.*

## **A. Introduction and Background for Study**

*(Report Section 1)*

We prepared this report in response to the County’s scope of work request for solid waste rate and service consulting assistance. NewPoint Group finalized a contract with the County on February 12, 2008, to perform these services. We relied upon comparative jurisdiction surveys, our own database of waste management industry data, onsite visits/interviews of the hauling companies, and other primary data collection efforts.

The County has solid waste collection franchises with six (6) companies, two (2) of which are Waste Connections of California companies, and three (3) of which are South Tahoe Refuse

companies. The County distinguishes between the more urban West Slope service areas, and the more rural East Slope service areas. The six companies are as follows:

- Waste Connections of California
  - Amador Disposal Service (ADS) – West Slope
  - El Dorado Disposal Services (EDDS) – West Slope
- South Tahoe Refuse Company
  - American River Disposal Service (ARDS) – East Slope
  - Sierra Disposal Service (SDS) – West Slope
  - South Tahoe Refuse Company (STR) – East Slope
- Tahoe Truckee Sierra Disposal Company (TTSD) – East Slope.

Exhibit 1-1, on pages 1-4 and 1-5, shows a detailed geographic map of the County’s waste management system.

As shown in **Table 1** below, Waste Connections companies serve approximately 57 percent of the County’s residential solid waste management accounts. South Lake Tahoe Refuse companies serve another approximately 40 percent of the County’s residential accounts, while Tahoe-Truckee Sierra Disposal serves only approximately three (3) percent to the County’s residential accounts.

**Table 1**  
Summary of Six County Solid Waste Collection Franchisees and Service Areas

Solid Waste Rate and Service Study  
El Dorado County

Region	Parent Company	Company	Estimated Number of Residential Unincorporated County Customers <sup>a</sup>			Unincorporated County Areas Served
			Can Customers	Car Customers	Total Customers	
West Slope	A. Waste Connections of California	Amador Disposal Service	1,747	258	2,005	South County (Somerset, Grizzly Flats, and Mt. Aukum)
		El Dorado Disposal Services	6,092	7,579	13,671	West County along Highway 50 Corridor (Pollock Pines west to El Dorado Hills)
	B. South Tahoe Refuse Company	Sierra Disposal Service	4,661	0	4,661	North County (Coloma, Pilot Hill, Cool, Lotus, Georgetown, Garden Valley, Greenwood, and Auburn Lake Trails)
East Slope	B. South Tahoe Refuse Company	American River Disposal Service	211	0	211	High Mountain County (Pacific House, Crystal Basin, Kyburz, Strawberry, and Echo Summit)
		South Tahoe Refuse Company	5,943	0	5,943	South Lake Tahoe Basin (Meyers, Christmas Valley, and Hope Valley)
	C. Tahoe-Truckee Sierra Disposal	Tahoe-Truckee Sierra Disposal	757	0	757	West Lake Tahoe Basin (Meeks Bay, Rubicon, and Tahoma)
<b>Total</b>			<b>19,411</b>	<b>7,837</b>	<b>27,248</b>	

<sup>a</sup> A county customer could equate to approximately 2.5 to 3.0 persons in the County population.

The County is currently faced with several challenging waste management system issues. The County is unique due to its (1) relatively large geographic size and variability, (2) urban and rural population mixes, and (3) diverse climate conditions. Waste management in the County is further complicated by several other important County-wide non-homogeneous factors, as summarized below:

- Different solid waste service levels
- Different solid waste diversion levels
- Different solid waste management options, including the non-mandatory collection (self-haul) option, and the yard waste burn option
- Different solid waste material processing approaches and capabilities
- Different solid waste rate setting methodologies
- Different solid waste rates and rate structures
- Different solid waste franchise agreement terms.

Historically, the County's waste management system has worked fairly well, particularly when the County was more rural in nature. Now, the County has grown, and in the future the County will become even more urban. However, the County will always retain a rural nature due to its foothill and mountain geography.

The County is presently at a crossroads. The County is bridged between a legacy waste management system that has well served a primarily rural County population, and the need for an updated, or more refined, waste management system to meet the demands of an ever evolving urban/rural population mix, and ever more stringent environmental requirements.

## **B. Solid Waste Rates and Service Levels, Including Comparisons Between the County and Selected Jurisdictions** *(Report Sections 2, 3, and 4; and Appendices A and B)*

For residential refuse service, the County generally has a can collection system, with cart service levels offered by ADS and EDDS, in their more urban areas. For over two-thirds of the County unincorporated areas, there is no refuse cart service available. For curbside recycling services, the County has some areas with a recyclable bag system, and some areas with biweekly cart service offered only by EDDS. The County does not have any yard waste service, except for areas served by EDDS (via cart service).

A can-based system represents one where the customer provides his/her own container or can (typically sized at 32-gallons). A cart-based system is one where the company provides the customer with a wheeled cart(s) (sometimes called a "toter"). Often in a cart-based system, the customer can select a refuse cart size that matches their waste generation level (typically either a 32-gallon, 64-gallon, or 96-gallon cart). Carts also can be provided for curbside recycling and/or curbside yardwaste collection. In a cart-based system, the company is responsible for purchasing, maintaining, repairing, and replacing the cart.

There is an extensive amount of comparative quantitative solid waste rate survey information presented in the relevant report sections and appendices. Almost all of this information required labor intensive, primary data collection. We have never compiled this much numerical California rate information before in one client document. This County and comparative rate information includes residential solid waste collection; commercial solid waste collection; industrial solid waste collection; and transfer stations and landfills.

We provide extensive rate comparisons between the County and fourteen (14) other similar neighboring unincorporated counties. Many of the surveyed counties had multiple different service areas within the county. In total, for the residential rate comparison alone, we provide comparative data for 54 different county areas within the 14 counties surveyed. Current County residential rates are shown in **Table 2** on the following page.

Current County solid waste management rates are (1) clearly comparable to other relevant jurisdictions for the residential sector; (2) are mostly comparable to other relevant jurisdictions for the commercial sector; and (3) are somewhat comparable to other relevant jurisdictions for the industrial sector. These findings suggest that on an overall basis, solid waste rate comparisons are not a policy issue for the County.

County mean rates, in comparison to the mean of 14 comparative jurisdictions, were as follows:

<b>Residential</b>	1, 32-gallon can	8.6 percent below the comparative mean
	2, 32-gallon cans	3.8 percent below the comparative mean
	1, 64-gallon cart	1.1 percent below the comparative mean
	1, 96-gallon cart	18.9 percent below the comparative mean
<b>Commercial</b>	2 yd./1 per week	44.9 percent below the comparative mean
	2 yd./2 per week	21.2 percent below the comparative mean
	3 yd./1 per week	33.2 percent below the comparative mean
	3 yd./2 per week	27.0 percent below the comparative mean
	4 yd./1 per week	28.0 percent below the comparative mean
	6 yd./1 per week	26.5 percent below the comparative mean
<b>Industrial</b>	20 yd/pick up	13.6 percent above the comparative mean
	30 yd/pick up	38.6 percent above the comparative mean.

County residential rates are consistently comparable across all service levels, contrasted to other jurisdictions which have similar solid waste collection systems, demographics, and/or geographic terrain characteristics to the County. Rate variations between different service levels tend to be larger for the more linear residential rate structures, in which rates vary more widely by service selection. The County has a more tightly grouped residential rate structure, so it may not be unusual that County rates are easily comparable to linear rate structure jurisdictions. County residential rates were generally comparative across all service levels, for both can service, and cart service, and across most companies.

**Table 2**  
**Residential Solid Waste Collection Rates for El Dorado County**  
Per Customer, per Month  
(As of January 2008)  
Solid Waste Rate and Service Study  
El Dorado County

No.	Company/Area	Service Level				
		1, 32-Gallon Can	1, 45-Gallon Can	2, 32-Gallon Cans	1, 64-Gallon Cart	1, 96-Gallon Cart

3.0	<b>American River Disposal Service</b>	13.46	15.62	18.09	N/A	N/A
4.0	<b>Sierra Disposal Service<sup>6</sup></b>	18.42	22.34	26.31	N/A	N/A
5.0	<b>South Tahoe Refuse Company<sup>4</sup></b>	N/A	N/A	23.79	N/A	N/A
C	<i>Tahoe-Truckee Sierra Disposal Company</i>					
6.0	<b>Tahoe Truckee Sierra Disposal<sup>5</sup></b>	16.21	N/A	21.76	N/A	N/A
	Mean of All County Areas	\$16.70	\$18.80	\$23.27	\$23.77	\$27.02
	Number of Rates	7	5	7	3	4
	Mean of Unincorporated County Franchise Areas	<b>\$16.08</b>	<b>\$18.91</b>	<b>\$23.07</b>	<b>\$26.26</b>	<b>\$26.81</b>
	Number of Rates	5	4	6	1	2
	Median	\$16.21	\$18.83	\$22.78	\$26.26	\$26.81
	Minimum	\$13.46	\$15.62	\$18.09	\$26.26	\$25.69
	Maximum	\$18.42	\$22.34	\$27.55	\$26.26	\$27.93
	Difference Between Minimum and Maximum	\$4.96	\$6.72	<b>\$9.46</b>	<b>\$0.00</b>	\$2.24
	Standard Deviation	\$2.27	\$3.14	\$3.53	–	\$1.58

<sup>1</sup> The rates do not include a \$3.32 additional charge for yard waste service.

<sup>2</sup> The \$20.99 rate is for a 35-gallon cart service. We included this rate in the 1, 32-gallon can equivalent rate category.

<sup>3</sup> These rates do not include a \$2.00 additional charge for yard waste service (for can customers only).

<sup>4</sup> The \$23.79 rate is for unlimited can service. We included this rate in the 2, 32-gallon can equivalent rate category.

<sup>5</sup> The rates include a \$0.26 additional charge for blue bag curbside recycling service. The blue bag recyclables are placed next to the can.

<sup>6</sup> These rates include a 10.74 percent Sierra Disposal Service rate increase effective June 1, 2007.

<sup>7</sup> These Amador Disposal Service rates include a fuel surcharge effective October 1, 2006.

<sup>8</sup> The City of Placerville has proposed a new cart-based system. The proposed rates for a 32-, 64-, and 96-gallon cart are \$17.37, \$27.02, and \$32.42, respectively (including fuel surcharge). These rates also include a 64- or 96-gallon recycling cart (bi-weekly), and a 96-gallon yardwaste cart (bi-weekly).

<sup>9</sup> These EDDS Unincorporated County rates include a fuel surcharge effective July 2007.

<sup>10</sup> These EDDS Cameron Park rates include a fuel surcharge effective July 2007.

<sup>11</sup> These City of Placerville rates include a fuel surcharge effective September 1, 2006.

<sup>12</sup> These El Dorado Hills rates include a fuel surcharge.

The County reported a diversion rate above the fifty (50) percent AB 939 diversion goal in 2006, of 53 percent. El Dorado County also has an additional five (5) percent biomass diversion credit for the unincorporated County. Generally, compared to twelve (12) jurisdictions meeting the fifty percent AB 939 diversion requirement, County overall residential rates are comparable.

County mean residential rates were between 3.2 and 27.1 percent below the mean residential rates of the twelve (12) comparative jurisdictions meeting AB 939 goals. If County mean residential rates are compared to just those eight (8) jurisdictions with similar “tightly grouped” rate structures to the County (i.e., with relatively little price incentive built into the rate structure) and meeting AB 939 goals, County mean residential rates were between 11.1 percent below, and 11.0 percent above, the mean of these eight (8) jurisdictions.

**C. Solid Waste Franchise Fees,  
Including Comparisons Between the County and Selected Jurisdictions**  
*(Report Section 5)*

Franchise fees are paid by each of the solid waste franchise companies to the County. Franchise fees generally are expressed as a percentage of gross revenues earned by the hauling company providing solid waste services. The County currently requires the franchise companies to remit franchise fees for five (5) percent of gross revenues (the same for all six franchisees). According to our franchise fee surveys, average franchise fees for the fourteen (14) comparable jurisdictions we surveyed range from approximately seven (7) percent to ten (10) percent. For a separate analysis of fifty (50) city and county franchise fees that we compiled, we found that franchise fees ranged from 4 to 16 percent of gross revenues with a mean of 9.6 percent.

The County’s relatively low franchise fees help maintain its relatively competitive refuse rates. On the other hand, the County has latitude to raise their franchise fees in the future to help fund needed County solid waste improvements.

**D. Solid Waste Services Profitability Level and Waste Management Industry Standards,  
Including Comparisons Between the County and Selected Jurisdictions**  
*(Report Section 6)*

There is an extensive amount of comparative quantitative solid waste management company profitability level information presented in this report section. The most common method that California jurisdictions use to determine franchise waste management company profitability is the operating ratio method. This ratio shows the efficiency of a company’s management by comparing operating expenses to revenues. For our surveyed jurisdictions, the median operating ratio was 90.0 percent (a profit rate of approximately eleven (11) percent of revenues).

Mean operating ratios of nine (9) publicly traded companies between 1997 and 2007 were 87 percent on a weighted average basis. Mean operating ratios for privately held companies from 2001 to 2007 were 94.7 percent.

In the past, when the County has specifically provided a regulated operating ratio return to a franchise hauler, the operating ratio has either been 90 percent or has varied dependent upon recycling recovery levels (e.g., 87 to 94.3 percent, or 80 to 100 percent).

There is also a considerable amount of comparative quantitative solid waste efficiency standards information presented in this report section. Productivity and efficiency measures discussed include collection measures, customer service measures, direct labor measures, cost measures, and other measures.

Based on our site visits to each of the parent franchise companies, interviews of company management, and analyses of data provided by the six companies, we provide an assessment of the relative productivity and efficiencies of each franchise company. Generally, each of the six franchise companies cannot materially increase their refuse collection operating efficiencies given the constraints of their rural, seasonal, and hard-to-serve service areas, though they may be able to increase curbside recycling opportunities and efficiencies.

Summary findings were that:

- ADS cannot materially increase its collection operating efficiencies given the constraints of its rural and hard-to-service areas.
- EDDS cannot materially increase its collection operating efficiencies in the hard-to-serve areas. EDDS has adapted by using manual-automated trucks to maximize efficiencies for collecting cans and carts in its rural areas. EDDS has sufficiently met current AB 939 diversion goals for the unincorporated County areas it serves
- ARDS cannot materially increase its collection operating efficiencies given the constraints of its rural, seasonal, and hard-to-service areas
- SDS cannot materially increase its collection operating efficiencies in its hard-to-service areas. With some degree of automation/cart-based service in the certain rural areas, SDS might be able to marginally increase its efficiencies
- STR cannot materially increase its collection operating efficiencies given the range of conditions present in its service areas
- TTDS cannot materially increase its collection operating efficiencies given the constraints of its rural and hard-to-service areas.

## **E. Franchise Agreement Valuations for County Solid Waste Services**

*(Report Section 7 and Appendix C)*

At the request of the County we valued County solid waste services franchise agreements for each of the six companies. Among the County agreements, for upcoming expiration, one franchise expires in late 2009 (TTSD), some franchises expire in 2012 (ADS and EDDS), and the other franchises expire in 2014 (ARDS, SDS, and STR).

For solid waste services franchise valuations, we estimated discounted future profitability cash flows. Net present values of projected financial profitability varied substantially by company.

Net present values for projected allowable profits, assuming a ten year franchise term, ranged from \$142,980 (ARDS) to \$5,352,510 (EDDS). These are relatively small estimated franchise values compared to franchise values in many other California cities and counties. These franchise agreement valuation projections should only to be used as high level estimates for County planning purposes.

## **F. Franchise Agreement Options for County Solid Waste Services**

*(Report Section 8)*

The County faces decisions with each of its franchises as to whether or not to extend their franchises. We discuss factors that the County should consider when evaluating franchise extensions. We also assess options available to the County related to franchise agreements with its franchised solid waste companies.

We recommend that the County take the following steps with its franchisees:

1. The County should develop at least a high level County solid waste management system plan before negotiating franchise extensions with any of its franchisees. This plan should align its future solid waste management system goals with the goals embodied in its franchise agreements. The system management plan should identify diversion plans; franchise boundaries; mandatory collection provisions; materials recovery facilities, transfer stations, and disposal facilities; rate setting process and methodologies; rate structure and rate objectives; service levels; and waste flows.
2. The County should entertain structured negotiations with each franchisee when time appropriate to assess the willingness of that franchisee to enhance its services to meet County solid waste management planning goals. Examples of enhanced services include piloting, or phasing in, new residential curbside collection programs such as full three-cart collection systems, cart-based recycling collection, or cart-based yardwaste collection, in portions of, or all of, a franchisee's service area.
3. The County should conduct well documented, transparent, negotiations with its franchise companies to address the potential for new programs and/or services. The County should identify whether each negotiated term or condition is a County benefit, ratepayer benefit, franchisee benefit, or a combination benefit. The County may want to consider not only new services, but new franchise terms and conditions (e.g., rate setting process and methodology, annual adjustments, annual rate caps, rate freezes)
4. The County should structure future franchises with a base term of nine (9) years, with three (3) additional, two-year extensions (each with required approval by the County only). In total, a new franchise would represent a maximum potential 15-year term (including the three (3), two-year extensions)
5. The County should only consider a new formal competitive bid process for its refuse providers unless it can not come to agreeable terms with its current franchisees
6. The County should not contemplate refuse collection operations of its own, and the County should continue to utilize private sector franchises for refuse collection.

## **G. Recommendations for County Solid Waste Management, Rates, and Service Levels** *(Report Section 9)*

The County is presently faced with a number of complex, and interrelated, substantive solid waste planning and rate setting issues. These issues will affect the County's future ability to manage its overall solid waste system. We summarize the following key recommendations for the County.

### **1. Solid Waste Management Disparities**

#### **a. County Franchises and Authorities**

- i. The County should carefully negotiate any future franchise extension requests to capture additional services, including waste diversion programs, and benefits from their haulers in return for an extension. A broad range of appropriate diversion discussion items should be part of every new franchise extension request negotiation
- ii. The County should work with its franchisees to enhance current curbside recycling programs in each franchise area. For some franchise areas, or portions of these franchise areas, this may involve piloting, or phasing in, cart-based curbside recycling. For other areas, this may involve placing materials in separate blue-bags outside the refuse container

#### **b. "Non-Mandatory" Residential Refuse Collection**

- i. The County should clarify and expand its mandatory residential collection situation with Tahoe-Truckee Sierra Disposal, and with other relevant regulatory entities, for the East Slope of the Sierra. The County should require, and strictly enforce, mandatory residential refuse collection for unincorporated County areas served by both Tahoe-Truckee Sierra Disposal and South Tahoe Refuse on the East Slope of the County
- ii. The County should undertake a formal study of the feasibility and impact of eliminating non-mandatory collection for the West Slope of the County. We believe that over the long-term the County likely will be best served with County-wide mandatory collection

#### **c. Regulated Yard Waste Burning and Yard Waste Collection**

- i. The County should develop long-term alternatives to yard waste burning for all unincorporated areas
- ii. The County should undertake a formal study of the feasibility and impact of eliminating the yard waste burning option for the West Slope of the County. This study would address issues of self-haul and illegal dumping; the impact of the policy of the need for new transfer stations in some rural parts of the County; and the potential interaction with the non-mandatory collection situation. We believe that over the long-term the County likely will be best served by elimination of the yard waste burning option

d. Disposal Facilities and Waste Management Facilities

- i. The County should conduct some long range special planning studies to help address County waste management facility issues, including studies of (1) long-term siting a new landfill in the County; (2) truck long haul of solid waste out-of-state; (3) rail haul of solid waste out-of-County or state; and (4) other non-traditional disposal options
- ii. The County should start to have some direct involvement in terms of ownership and/or control of its waste management facilities, however this should not extend to County run collection operations
- iii. The County should study the issue of West Slope solid waste flow control and the eventual need for a West Slope Joint Powers Authority
- iv. The County should integrate results of all of the above waste management recommendation initiatives into a comprehensive County solid waste management plan

**2. Solid Waste Rate, Rate Structure, and Service Level Disparities**

- a. The County should accept some variation in its residential refuse, curbside recycling, and yard waste collection service levels throughout the County, as much of this variation is entirely justified due to the unique challenging operating conditions of the service areas. This does not mean that the County should remain status quo with its operations and service levels, but rather the County should work with its franchisees to implement thoughtful and incremental service level changes
- b. The County should develop, implement, and enforce one common rate setting methodology that would be used for all six of its franchise refuse haulers
- c. The County should use a rate setting methodology based on accounting for hauler allowable costs, pass through costs, and non-allowable costs using the industry standard ninety (90) percent operating ratio
- d. The County should review, and if necessary refine, each franchise haulers' rate structure at implementation of the common rate setting methodology. Some refuse haulers, like STR, should move from the unlimited can service rate to a more tiered residential rate structure. Other haulers, like SDS, should move toward a more tiered residential rate structure for some of their less remote areas. Finally some haulers, like EDDS, should create better pricing incentives by revising their residential rate structures.

NewPoint Group wishes to thank County management and staff from the Environmental Management Department who enthusiastically assisted us on this rapid, four month study. These persons included Ms. Gerri Silva, Mr. Greg Stanton, Ms. Kerri Williams, and Mr. Kevin Gilliland. We also wish to thank management of all three parent franchise companies for their full cooperation on this project, each of whom spent considerable time and effort responding to our numerous information requests.

Ms. Gerri Silva  
August 5, 2008

**Section 1**  
**Introduction and**  
**Background for Study**

# 1. Introduction and Background for Study

The County of El Dorado (County) contracted with NewPoint Group, Inc. (NewPoint Group) to conduct this solid waste rate and service study to: (1) assess current County rates and service levels; (2) compare County operations and financial results with other jurisdictions; (3) assess profitability and system requirements of its franchise companies; and (4) recommend a new residential collection system and rate structure.

NewPoint Group was retained to assist the County with a broad range of waste management issues. This report presents our work results on thirteen (13) work tasks, presented in our Phase I Work Plan. These thirteen work tasks are cross-referenced to the different sections of this report, below.

## Contract Work Tasks

## Report Sections

- |   |                 |
|---|-----------------|
| 1. Compare and analyze current County rates and service levels  | (Section 2)     |
| 2. Survey, comparable to the County, rates and service levels   | (Section 3)     |
| 3. Identify diversion levels, rates, and service levels of the County; and compare them to similar jurisdictions meeting AB 939 goals | (Section 4)     |
| 4. Recommend adjustments to County rates and service levels   | (Section 9)     |
| 5. Identify County rate and service level problems, and recommend solutions   | (Section 9)     |
| 6. Recommend an effective and efficient County residential collection system and rate schedule  | (Section 9)     |
| 7. Survey profitability levels for companies serving County areas   | (Section 6)     |
| 8. Survey industry profitability, productivity, and efficiency standards  | (Section 6)     |
| 9. Value franchise agreements for the County franchise companies  | (Section 7)     |
| 10. Survey, comparable to the County, franchise fees paid by haulers  | (Section 5)     |
| 11. Participate in County meetings to convey study results  | (Section 1)     |
| 12. Prepare draft, and final, reports for the County  | (Entire Report) |
| 13. Assess County franchise agreement extension options.  | (Section 8).    |

The remainder of this section is organized as follows:

- A. *Study Objectives and Scope*
- B. *County Franchise Background.*

### A. Study Objectives and Scope

We prepared analyses in this report in response to the County's scope of work request for solid waste rate and service consulting assistance. NewPoint Group submitted a proposal to provide solid waste rate and service assistance to the County on November 2, 2007. NewPoint Group finalized a contract with the County on February 12, 2008, to perform these services.

To fully understand the range of waste management problems and issues affecting the entire County, this study included both West Slope, and East Slope, County service areas. This comprehensive County-wide scope was necessary to develop meaningful and practical waste management findings and recommendations.

In this study, we obtained supporting information for current rates and service levels from the County, and its franchise companies, for all the residential, commercial, and industrial sectors. We also obtained comparative information for residential, commercial, and industrial rates, and service levels, as well as transfer stations and landfills, by conducting comparative jurisdiction surveys.

In addition, we obtained franchise company profitability (where available), and diversion information, pertaining to the County. For waste management company financial return data, we drew upon historical data in our own database of returns for publicly held, and privately held, solid waste collection and disposal companies. Based on all the information collected, we developed a series of summary matrices that compared franchise company rates and service levels; tipping fees; franchise fees; and diversion levels.

As requested by the County, we valued the County franchise agreements. By analyzing recent financial statements; rate applications and rate review documents; and other cost information for

each company, we projected up to fifteen years of discounted profitability cash flow for each company.

### B. County Franchise Background

El Dorado County (County) is currently faced with several challenging waste management system issues. The County is unique due to its (1) relatively large size, and geographic variability; (2) urban and rural population mixes; and (3) diverse climate conditions.

The recent annual total County population growth of eight to ten percent is among the State's highest, with the 2025 total County population projected at 243,000 persons. This demographic projection means that 67,000 new persons would be added to the County's 2006 total population of approximately 176,000 persons, during the 19-year period, from 2006 to 2025.

The County has solid waste collection franchises with the following six (6) companies, two of which are Waste Connections companies, and three of which are South Tahoe Refuse companies:

#### A. *Waste Connections of California*

1. Amador Disposal Service  
– West Slope
2. El Dorado Disposal Services  
– West Slope

#### B. *South Tahoe Refuse Company*

3. American River Disposal Service  
– East Slope
4. Sierra Disposal Service  
– West Slope
5. South Tahoe Refuse Company  
– East Slope

#### C. *Tahoe-Truckee Sierra Disposal Company*

6. Tahoe-Truckee Sierra Disposal  
– East Slope.

The County has solid waste collection franchise agreements with each of these six companies. These six companies service six (6)

---

different unincorporated County areas, as shown in **Exhibit 1-1**, on the next page. In the 1970s, over nearly forty years ago, the County established these geographic areas based on legacy factors such as road/bridge infrastructure and proximity to landfill sites.

The County distinguishes between West Slope service areas, and East Slope services areas. The West Slope service areas include areas within the current boundaries of the solid waste collection franchises for (1) Amador Disposal Service, (2) El Dorado Disposal Services, and (3) Sierra Disposal Service.<sup>1</sup> East Slope service areas are those served by (1) American River Disposal Service, (2) South Tahoe Refuse Company, and (3) Tahoe-Truckee Sierra Disposal.<sup>1</sup>

As shown in **Table 1-1**, on page 1-6, Waste Connections companies serve approximately 57 percent of the County's residential accounts. South Lake Tahoe Refuse companies serve another approximately 40 percent of the County's residential accounts, while Tahoe-Truckee Sierra Disposal serves approximately three (3) percent of the County's residential accounts.

El Dorado Disposal Services (Waste Connections) also serves Cameron Park (Cameron Park Community Services District), El Dorado Hills (El Dorado Hills Community Services District), and the City of Placerville under separate non-County franchises. Finally, South Tahoe Refuse Company, also serves the City of South Lake Tahoe, under a separate non-County franchise.

Estimated 2006 populations for four, non-County franchise areas are as follows:

- Cameron Park – 18,000
- El Dorado Hills – 35,000
- City of Placerville – 10,000
- City of South Lake Tahoe – 24,000.

Western El Dorado Recovery Systems, a company with common ownership to El Dorado Disposal Services, provides transfer station and Materials Recovery Facility (MRF) operations, and an on-site certified recycling redemption and household hazardous waste (HHW) center for various customers on the West Slope of the County. South Tahoe Refuse Transfer Station, owned by South Tahoe Refuse Company, serves the surrounding Lake Tahoe area, and also operates a MRF and transfer station that includes a buy-back center and a free HHW program for various customers on the East Slope of the County. Tahoe Truckee Sierra Disposal Company operates a transfer station and MRF, buyback center, and HHW operation in unincorporated Placer County, near Truckee, California.

Given the current challenging waste management conditions for the County (a large and varied geography, a diverse and growing population, and a wide range of climates), waste management in the County is further complicated by several other important key factors, as summarized below:

- *Different rate structures and rates* – Residential solid waste rates vary widely by service area
- *Different rate setting methodologies* – The County uses different solid waste rate setting methodologies for different franchise areas
- *Different service levels* – The urban portions, and rural portions, of the County receive different solid waste service levels
- *Different residential solid waste management options* – There are two residential solid waste management options, in addition to the current solid waste collection services, as follows:
  - Yard waste burn option
  - Non-mandatory collection (self-haul) option

---

<sup>1</sup> Source: Franchise Agreements between the County and the haulers.

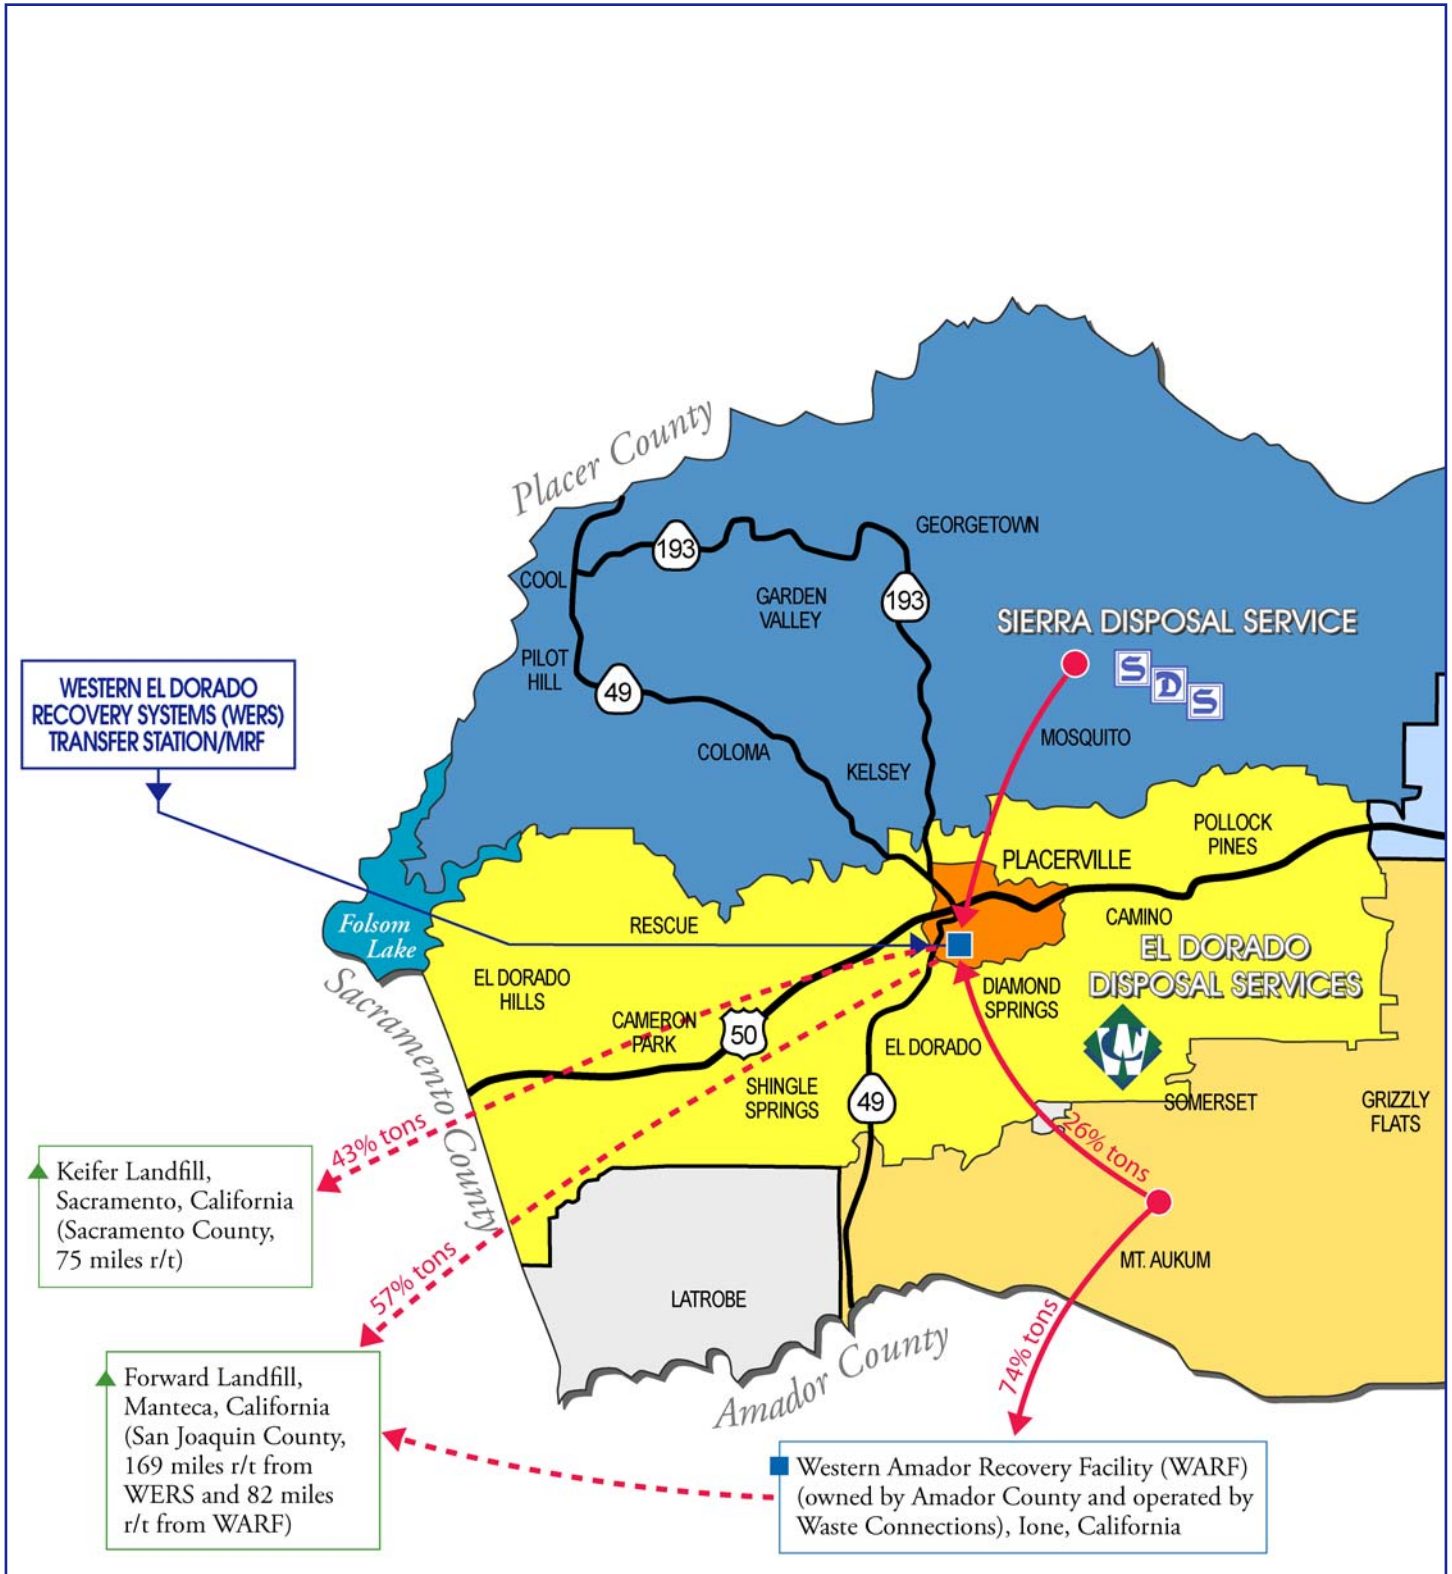

# 1. Introduction and Background for Study

## Exhibit 1-1

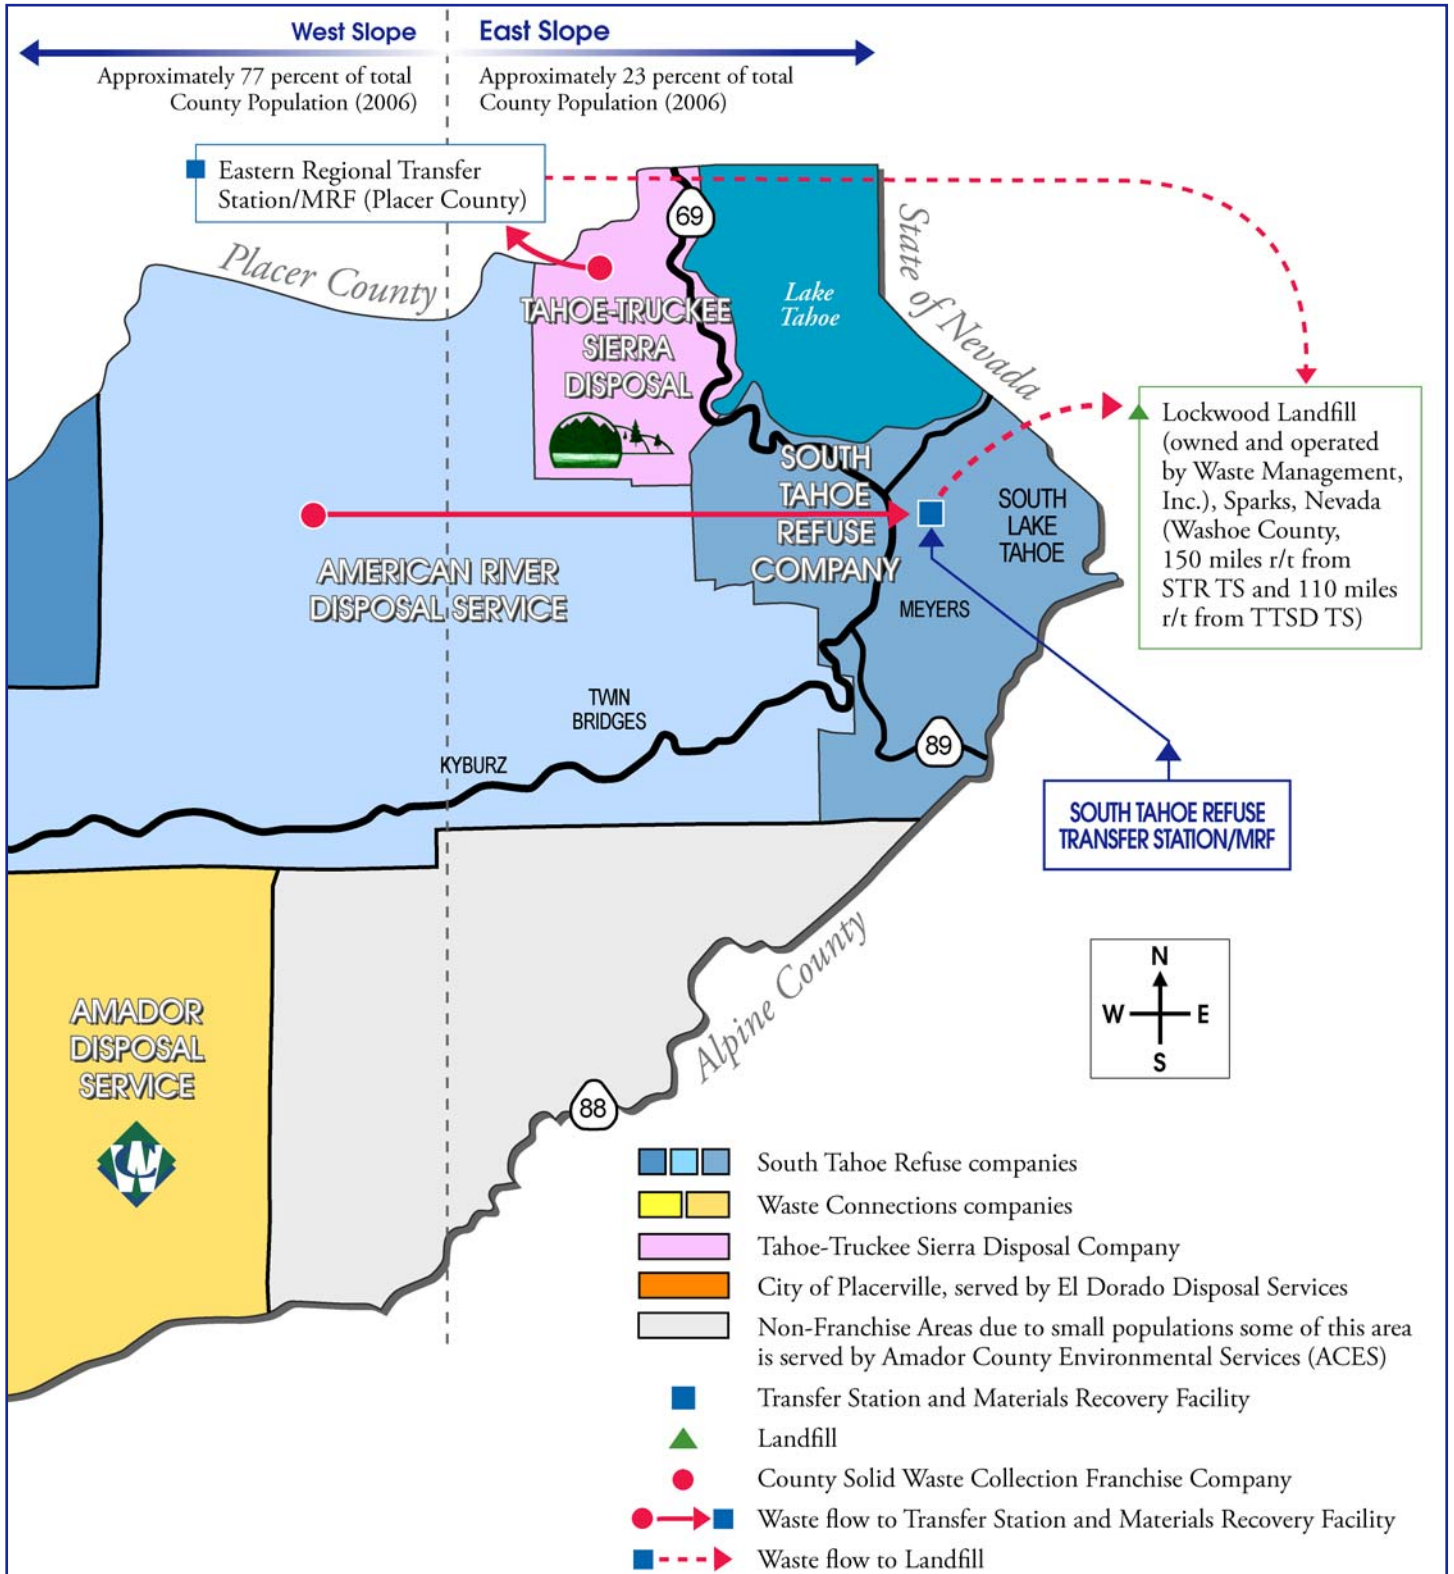

Areas Served by Six County Solid Waste Collection Franchise Companies

Solid Waste Rate and Service Study

El Dorado County

**Table 1-1**  
**Summary of Six County Solid Waste Collection Franchisees and Service Areas**  
**Solid Waste Rate and Service Study**  
**El Dorado County**

Region	Parent Company	Company	Estimated Number of Residential Unincorporated County Customers <sup>a</sup>	Unincorporated County Areas Served
West Slope	A. Waste Connections of California	A.1 Amador Disposal Service	2,005	South County (Somerset, Grizzly Flats, and Mt. Aukum)
		A.2 El Dorado Disposal Services	13,671	West County along Highway 50 Corridor (Pollock Pines west to El Dorado Hills)
	B. South Tahoe Refuse Company	B.4 Sierra Disposal Service	4,661	North County (Coloma, Pilot Hill, Cool, Lotus, Georgetown, Garden Valley, Greenwood, and Auburn Lake Trails)
East Slope	B. South Tahoe Refuse Company	B.3 American River Disposal Service	211	High Mountain County (Pacific House, Crystal Basin, Kyburz, Strawberry, and Echo Summit)
		B.5 South Tahoe Refuse Company	5,943	South Lake Tahoe Basin (Meyers, Christmas Valley, and Hope Valley)
	C. Tahoe-Truckee Sierra Disposal	C.6 Tahoe-Truckee Sierra Disposal	757	West Lake Tahoe Basin (Meeks Bay, Rubicon, and Tahoma)
<b>Total</b>			<b>27,248</b>	

<sup>a</sup> A county customer could equate to approximately 2.5 to 3.0 persons in the County population.

- *Different solid waste material processing approaches and capabilities* - Franchise companies use different transfer stations/MRFs and landfills
- *Different solid waste franchise agreement terms* – The County has six (6) different franchise agreements with the franchise companies, each with different expiration dates
- *Different solid waste diversion levels* – Each franchise has different diversion levels. The County deserves a County-wide system capable of moving beyond the current AB 939 goal.

All of these additional challenges are presented as background to the various rate and service analyses, presented herein this report.

**Section 2**  
**Solid Waste Rate**  
**and Service Levels**

## 2. Solid Waste Rate and Service Levels

This section describes the solid waste collection systems in use for the County. The collection systems handle County refuse, recycling, and yard waste services. The County currently has six (6) exclusive franchise companies. These exclusive franchise companies provide residential, commercial, and industrial solid waste collection; transportation; processing and recycling; and disposal services for the County franchise area customers.

In this section, County rates and service levels are described for residential, commercial, and industrial services, by franchise company and area. For residential solid waste collection services, we provide information for refuse, curbside recycling, and yard waste services. Under each rate and service category, for each of the three residential, commercial, and industrial service sectors, we calculated rate statistics, such as average, median, minimum and maximum; difference between minimum and maximum; and standard deviation.

This section includes current County residential, commercial, and industrial solid waste collection rate and service level data, as baseline data for this study. An understanding of the existing solid waste collection rates, and service levels, is necessary so recommendations can be made to improve County rates and service levels; to resolve rate or service level problems; and to identify and develop effective and efficient solid waste collection systems and rate schedules for the County.

The remainder of this section is organized as follows:

- A. *Residential Solid Waste Collection*
- B. *Commercial Solid Waste Collection*
- C. *Industrial Solid Waste Collection*
- D. *Transfer Stations and Landfills*
- E. *Summary of Solid Waste Rate and Service Levels.*

### A. Residential Solid Waste Collection

#### 1. Residential Solid Waste Collection Rates

In **Table 2-1**, on the next page, we show El Dorado County residential solid waste collection rates for five (5) service levels. For El Dorado Hills, served by El Dorado Disposal Services, the \$20.99 rate is for a 35-gallon cart service level. We included this rate in the 1, 32-gallon can category as an equivalent rate. For the County franchise area served by South Tahoe Refuse Company, the \$23.79 rate is for unlimited can service. We included this rate in the 2, 32-gallon can category as an equivalent rate.

## 2. Solid Waste Rate and Service Levels

	Mean of Unincorporated County Franchise Areas	<b>\$16.08</b>	<b>\$18.91</b>	<b>\$23.07</b>	<b>\$26.26</b>	<b>\$26.81</b>
	Number of Rates	5	4	6	1	2
	Median	\$16.21	\$18.83	\$22.78	\$26.26	\$26.81
	Minimum	\$13.46	\$15.62	\$18.09	\$26.26	\$25.69
	Maximum	\$18.42	\$22.34	\$27.55	\$26.26	\$27.93
	Difference Between Minimum and Maximum	\$4.96	\$6.72	<b>\$9.46</b>	<b>\$0.00</b>	\$2.24
	Standard Deviation	\$2.27	\$3.14	\$3.53	–	\$1.58

<sup>1</sup> The rates do not include a \$3.32 additional charge for yard waste service.

<sup>2</sup> The \$20.99 rate is for a 35-gallon cart service. We included this rate in the 1, 32-gallon can equivalent rate category.

<sup>3</sup> These rates do not include a \$2.00 additional charge for yard waste service (for can customers only).

<sup>4</sup> The \$23.79 rate is for unlimited can service. We included this rate in the 2, 32-gallon can equivalent rate category.

<sup>5</sup> The rates include a \$0.26 additional charge for blue bag curbside recycling service. The blue bag recyclables are placed next to the can.

<sup>6</sup> These rates include a 10.74 percent Sierra Disposal Service rate increase effective June 1, 2007.

<sup>7</sup> These Amador Disposal Service rates include a fuel surcharge effective October 1, 2006.

<sup>8</sup> The City of Placerville has proposed a new cart-based system. The proposed rates for a 32-, 64-, and 96-gallon cart are \$17.37, \$27.02, and \$32.42, respectively (including fuel surcharge). These rates also include a 64- or 96-gallon recycling cart (bi-weekly), and a 96-gallon yardwaste cart (bi-weekly).

<sup>9</sup> These EDDS Unincorporated County rates include a fuel surcharge effective July 2007.

<sup>10</sup> These EDDS Cameron Park rates include a fuel surcharge effective July 2007.

<sup>11</sup> These City of Placerville rates include a fuel surcharge effective September 1, 2006.

<sup>12</sup> These El Dorado Hills rates include a fuel surcharge.

**Table 2-2**  
**Residential Solid Waste Collection Rates**  
**for El Dorado Disposal Services**

Per Customer, per Month  
 (As of January 2008)

Solid Waste Rate and Service Study  
 El Dorado County

Area	1, 64-Gallon Cart	1, 96-Gallon Cart
Cameron Park	\$22.44	\$22.79
City of Placerville	N/A	N/A
El Dorado Hills	<b>\$22.61</b>	<b>\$31.68</b>
Unincorporated County Area	\$26.26	\$27.93

We didn't include the additional charges for yard waste service, if any, in the rates presented in Table 2-1. For example, the City of Placerville, served by El Dorado Disposal Services, has a \$3.32 additional charge for yard waste service. The Unincorporated County area served by El Dorado Disposal Services, has a \$2.00 additional charge for yard waste service for can customers. For the County franchise area, served by Tahoe-Truckee Sierra Disposal, the rates include a \$0.26 additional charge for curbside recycling bag service.

For the purposes of this study, we focused on the unincorporated County franchise areas, which include the following areas:

- 1.0 Amador Disposal Service
- 2.4 El Dorado Disposal Services, Unincorporated County Area
- 3.0 American River Disposal Service
- 4.0 Sierra Disposal Service
- 5.0 South Tahoe Refuse Company
- 6.0 Tahoe-Truckee Sierra Disposal.

Our statistics and analyses in the report were based on these unincorporated County franchise area rates. For example, "County mean" refers to the mean of unincorporated County franchise

areas; same for the other statistics, such as median, minimum, maximum, difference between minimum and maximum, and standard deviation.

County mean residential solid waste collection rates, per customer, per month, were as follows:

- 1, 32-gallon can: \$16.08
- 1, 45-gallon can: \$18.91
- 2, 32-gallon cans: \$23.07
- 1, 64-gallon cart: \$26.26
- 1, 96-gallon cart: \$26.81.

The mean 2, 32-gallon can rate was lower than the mean 1, 64-gallon cart rate, differing by \$3.19, or 12 percent.

County residential rates vary widely by service level. Among the service levels, the 2, 32-gallon cans service level has the largest range, and the 1, 64-gallon cart service level has the smallest range, compared to the other service levels within the County. Not all five service levels are provided by each company.

County residential rates also vary widely by service area. For example, El Dorado Disposal Services serves four County residential collection areas, and has different rates for each area. We assessed rate differences across those areas served by this company.

**Table 2-2**, left, shows El Dorado Disposal Services residential rates for 64-, and 96-gallon cart service levels, by its different service areas, including Cameron Park Community Services District (Cameron Park CSD), the City of Placerville, El Dorado Hills CSD, and the Unincorporated County area. For these four areas, El Dorado Hills has a much larger rate difference between the 64- and 96-gallon cart service levels than the other three collection areas do. In contrast, for Cameron Park CSD and the Unincorporated County area, there are small rate differences between the 64- and 96-gallon cart service levels, so customers may have little incentive to select the cart size most appropriate for their refuse generation level.

## 2. Solid Waste Rate and Service Levels

**Table 2-3**  
**Residential Solid Waste Collection Service Levels for El Dorado County**  
 Per Customer, per Month  
 (As of January 2008)  
 Solid Waste Rate and Service Study  
 El Dorado County

No.	Company/Area	Service Type		
		Refuse*	Curbside Recycling*	Yard Waste*
A	<i>Waste Connections of California</i>			
1.0	<b>Amador Disposal Service</b>	32 or 45-gallon can(s), or 96-gallon cart, weekly	Blue bag in the cans, weekly	None
2.0	El Dorado Disposal Services			
2.1	– Cameron Park	64 or 96-gallon cart, weekly	64-gallon or 96-gallon cart, biweekly	96-gallon carts, biweekly
2.2	– City of Placerville	32 or 45-gallon can(s), weekly	Blue bin or customer provided containers, weekly	Customer provided bags or containers, taken to the Recycle Center for free by customer
2.3	– El Dorado Hills	35, 64, or 96-gallon cart, weekly	64-gallon or 96-gallon cart, biweekly	96-gallon carts, biweekly
2.4	<b>– Unincorporated County Area</b>	32 or 45-gallon can(s), or 64 or 96-gallon cart, weekly	64 or 96-gallon carts, or blue bags, biweekly	96-gallon carts, bags, or bundles, biweekly
B	<i>South Tahoe Refuse Company</i>			
3.0	<b>American River Disposal Service</b>	32 or 45-gallon can(s), weekly	None, material is sorted at MRF	None, material is sorted at MRF
4.0	<b>Sierra Disposal Service</b>	32 or 45-gallon can(s), weekly	Blue bags, weekly	None
5.0	<b>South Tahoe Refuse Company</b>	Unlimited can(s), weekly	None, material is sorted at MRF	None, material is sorted at MRF
C	<i>Tahoe-Truckee Sierra Disposal Company</i>			
6.0	<b>Tahoe-Truckee Sierra Disposal</b>	32-gallon can(s), weekly	Blue bags (outside refuse container), weekly	None

\* Carts are provided by the companies. Cans are provided by customers.

### 2. Residential Solid Waste Collection Service Levels

We summarized current County residential solid waste collection service levels for refuse, curbside recycling, and yard waste services, in **Table 2-3**, above. This table includes detailed information on container sizes, container types, and collection frequencies, for each of the franchise areas.

#### a. Residential Refuse Services

Pursuant to *Section 6* of the Franchise Agreements, between the County and its franchise companies, refuse services are once-a-week services. For County residential refuse collection services, refuse is picked up once a week in all service areas. However, County customers are offered different service level options in terms of container size and container type, depending on the service area. For example, in the more urban portions of the County (e.g., Cameron Park CSD and El Dorado Hills

---

CSD), served by El Dorado Disposal Services, customers select a refuse cart (provided by the company serving the area), from the following sizes:

- El Dorado Disposal Services, Cameron Park CSD – 64 or 96-gallon cart
- El Dorado Disposal Services, El Dorado Hills CSD – 35, 64 or 96-gallon cart.

For the more rural County areas, and the City of Placerville, customers generally provide their own can(s), and decide the number of cans for refuse service, as follows:

- El Dorado Disposal Services, City of Placerville – 32 or 45-gallon can(s)
- American River Disposal Service, County Franchise Area – 32 or 45-gallon can(s)
- Sierra Disposal Service, County Franchise Area – 32 or 45-gallon can(s)
- South Tahoe Refuse Company, County Franchise Area – Unlimited can(s)
- Tahoe-Truckee Sierra Disposal, County Franchise Area – 32-gallon can(s).

There are two collection areas with both can and cart service options available to the customers. Customers can choose between can service and cart service, as follows:

- Amador Disposal Service, County Franchise Area – 32 or 45-gallon can(s) or 96-gallon cart
- El Dorado Disposal Services, County Franchise Area – 32- or 45-gallon can(s), or 64 or 96-gallon cart.

#### **b. Residential Curbside Recycling Services**

Depending on the service area, there are three types of residential curbside recycling container options offered to County customers, including blue bag, blue bin, or cart. Blue bags are collected weekly, or bi-weekly, the larger 64- and 96-gallon carts are collected biweekly, and the blue bin is collected weekly.

In areas served by El Dorado Disposal Services, most customers are offered a biweekly cart option for curbside commingled recycling services (up to two, 64-, or 96-gallon carts provided by the company). However, in the City of Placerville, customers are offered blue bin, or customer provided, containers for recycling services. Recycling servers are as follows:

- 96-gallon cart, biweekly – Cameron Park CSD, El Dorado Hills CSD
- 64-gallon or 96-gallon carts, or blue bags, biweekly – El Dorado Disposal Services Unincorporated County area
- Blue bin, or customer provided, containers, weekly – the City of Placerville.

In addition to El Dorado Disposal Services, there are three other County franchise areas with blue bag curbside recycling service, as follows:

- Blue bags – Amador Disposal Service, Sierra Disposal Service, and Tahoe-Truckee Sierra Disposal County franchise areas.

In the County franchise areas served by American River Disposal Service and South Tahoe Refuse Company, curbside recycling service is not available. In these two areas, materials are sorted at the South Tahoe Refuse Transfer Station “dirty” MRF.

Residential curbside recycling service rates are included in the standard refuse collection services for most customers, except that in the County franchise area served by Tahoe-Truckee Sierra Disposal, there is a \$0.26 additional charge for curbside recycling service (this additional charge is included in the rates presented in Table 2-1, above).

#### **c. Residential Yard Waste Services**

In the County, El Dorado Disposal Services is the only franchise company that provides residential yard waste services to its customers. El Dorado Disposal Services provides 96-gallon cart services, biweekly, for curbside yard waste services to most of its area customers, such as customers in the

Cameron Park CSD, El Dorado Hills CSD, and the Unincorporated County area.

Any County customer can take bags or containers of yard waste to the Waste Connections recycling center at 580 Truck Street between Tuesday and Saturday from 8:30 a.m. to 4:00 p.m., for free of charge. In the Unincorporated County area, El Dorado Disposal Services also provides yard waste service options, such as bags, or bundles. There is a \$3.32 additional charge for the City of Placerville customers, and a \$2.00 additional charge for the Unincorporated County area customers.

In the rest of the County franchise areas, the companies don't provide residential yard waste service to their customers. In these service areas, instead of customers separating materials, materials are sorted at the South Tahoe Refuse Transfer Station dirty MRF. These County franchise areas, without yard waste service available, are as follows:

- Amador Disposal Service, County Franchise Area
- American River Disposal Service, County Franchise Area
- Sierra Disposal Service, County Franchise Area
- South Tahoe Refuse Company, County Franchise Area
- Tahoe-Truckee Sierra Disposal, County Franchise Area.

In addition to the curbside yard waste services provided by El Dorado Disposal Services, the County also presently employs a yard waste burn option. County customers may burn tree trimmings, leaves, dry pine needles, and plants on their property during scheduled burn days and times. As a result, these customers may not require curbside yard waste services.

### B. Commercial Solid Waste Collection

Similar to residential services, the six franchise companies provide County commercial solid waste collection services. Each company serves its own exclusive franchise area, as described for residential services above.

In **Table 2-4**, on the next page, we show El Dorado County commercial solid waste collection rates for the most common 1-, 2-, 3-, 4-, and 6-cubic yard, 1 time per week service levels, and 1-, 2-, 3-, 4-, and 6-cubic yard, 2 times per week service levels.

We included some equivalent rates in Table 2-4. For example, for Amador Disposal Service, we assumed 2 times per week service level rates were twice the 1 time per week service level rates, for the same cubic yard service level. For American River Disposal Service, Sierra Disposal Service, and South Tahoe Refuse Company, which are under the same parent company (i.e., South Tahoe Refuse Company), we used the 1-cubic yard, 1 time per week rates, as the base rates for calculating the other service level rates. For instance, the 2-cubic yard, 1 time per week rate, was twice the 1-cubic yard, 1 time per week rate, and the 2-cubic yard, 2 times per week rate, was four times the 1-cubic yard, 1 time per week rate, etc.

County mean commercial 1 time per week bin rates, per customer, per month, were as follows:

- 1-cubic yard : \$38.79
- 2-cubic yard : \$73.46
- 3-cubic yard : \$116.35
- 4-cubic yard : \$152.49
- 6-cubic yard : \$215.50.

And County mean commercial 2 times per week bin rates, per customer, per month, were as follows:

- 1-cubic yard : \$77.57
- 2-cubic yard : \$185.72

**Table 2-4**  
**Commercial Solid Waste Collection Rates for El Dorado County**  
Per Customer, per Month  
(As of January 2008)  
Solid Waste Rate and Service Study  
El Dorado County

No.	Company/Area	Service Level				
		1 time per week service				
		1-yr	2-yr	3-yr	4-yr	6-yr
A	<i>Waste Connections of California</i>					
1.0	<b>Amador Disposal Service</b>	\$54.21	\$108.47	N/A	N/A	\$162.71
2.0	El Dorado Disposal Services <sup>1</sup>					
2.1	– Cameron Park	73.93	128.02	\$191.19	\$251.56	377.35

Note: \*Equivalent rates.

<sup>1</sup> The rates include a fuel surcharge.

- 3-cubic yard : \$228.36
- 4-cubic yard : \$296.61
- 6-cubic yard : \$428.48.

Similar to County residential rates, commercial rates vary widely, by service level. For example, for 1 time per week service, 1-cubic yard rates ranged from \$14.16 to \$76.82, or by \$62.66, per customer, per month; 2-cubic yard rates ranged from \$28.32 to \$133.01, or by \$104.69, per customer, per month; 3-cubic yard rates ranged from \$42.48 to \$198.65, or by \$156.17, per customer, per month; 4-cubic yard rates ranged from \$56.64 to \$261.37, or by \$204.73, per customer, per month; and 6-cubic yard rates ranged from \$84.96 to \$392.07, or by \$307.11, per customer, per month.

The commercial rates vary more as service levels increase. For example, the 6-cubic yard service level, 2 times per week, has the largest rate range compared to the other commercial service levels within the County. In contrast, the 1-cubic yard service level, 1 time per week, has the smallest rate range.

### C. Industrial Solid Waste Collection

In **Table 2-5**, on the next page, we present El Dorado County industrial solid waste collection rates for two common 20-, and 30-cubic yard drop box service levels. In order to have a consistent rate structure for all County franchise companies, we didn't include the additional per ton tipping fee charges in excess of certain tons (e.g., 2, 3.5, 5, or 7 tons) in the rates presented in Table 2-5, instead we noted selected details as footnotes.

County mean industrial drop box rates, per pick up, were as follows:

- 20-cubic yard drop box: \$356.64
- 30-cubic yard drop box: \$519.78.

Industrial rates vary by service level. For example, 20-cubic yard drop box rates ranged from \$331.50 to \$427.98 per pick up, or by \$96.48. The 30-cubic yard drop box rates ranged from \$430.16 to \$638.15 per pick up, or by \$207.99. The 30-cubic yard drop box rates have a relatively large range compared to the 20-cubic yard drop box rates.

El Dorado Disposal Services provides industrial service to its four collection area customers at relatively tightly grouped rates for both 20- and 30-cubic yard drop box services. For example, 20-cubic yard drop box rates ranged from \$318.43 to \$341.50, or by \$23.07, and 30-cubic yard drop box rates ranged from \$401.22 to \$430.17, or by \$28.95.

### D. Transfer Stations and Landfills

Transfer station and Materials Recovery Facilities, and landfills are key elements in the County solid waste collection system. County customers are served by four (4) Materials Recovery Facilities (MRFs) and transfer stations (two in-County), as follows:

- Western El Dorado Recovery Systems (WERS) MRF, located at Diamond Springs, California (El Dorado County)
- Western Amador Recovery Facility (WARF), located at Ione, California (Amador County)
- South Tahoe Refuse Transfer Station, located at South Lake Tahoe, California (El Dorado County)
- Eastern Regional Transfer Station, located in Placer County.

In addition, there are three landfills, all out-of-County, used by the six El Dorado County haulers, as follows:

- Forward Landfill – located at Manteca, California (San Joaquin County)
- Kiefer Landfill – located at Sacramento, California (Sacramento County)
- Lockwood Landfill – located at Sparks, Nevada (Washoe County).

**Table 2-5**

Maximum	<b>\$78.40</b>	

\* Equivalent rate. The rate is for 8 yards.

These transfer facilities and landfills used by County franchise companies receive solid waste from the unincorporated areas and incorporated cities via the County's franchised haulers. Solid waste is generated from a mix of residential, commercial, and industrial sources in the County.

Refuse collection services are non-mandatory for the unincorporated County areas, except for the South Tahoe Refuse County franchise area. County customers are not obligated to pay for refuse collection services. Many customers prefer to self-haul their refuse to a transfer station. Up to twenty (20) percent of total County refuse volume is self-hauled. However, refuse collection services are mandatory for Cameron Park CSD, El Dorado Hills CSD, and the City of South Lake Tahoe.

The County has recently been asked to consider some small scale waste management facilities in rural portions of the County. Sierra Disposal Service proposed to build a small volume transfer station and recycling facility within the Georgetown/Divide area to combat illegal dumping and provide opportunities for

disposal and recycling. The facilities would accept materials for disposal, as well as recycling.

The Materials Recovery Facilities (MRFs) are one of the County's key elements in meeting the State's fifty (50) percent, Assembly Bill (AB) 939 waste reduction goal. All waste is sorted at these facilities to recover recyclable materials. Recovered materials are cleaned and sold to market.

In **Table 2-6**, above, we provide a summary of the transfer stations/MRFs used by the County's franchisees, as well as tipping fee information. Refuse is transferred to the Western El Dorado Recovery Systems MRF, which is owned and operated by El Dorado Disposal Services; the South Tahoe Refuse Transfer Station, which is owned and operated by South Tahoe Refuse Company; the Eastern Regional Transfer Station/MRF which is operated by Tahoe Truckee Sierra Disposal on Placer County owned land, as well as the Western Amador Recovery Facility, which is operated by Amador Disposal Service; for the purposes of recovering and recycling materials. The per ton tipping fee rates

3.0	<b>American River Disposal Service</b>	South Tahoe Refuse Transfer Station, South Lake Tahoe, CA	Lockwood Landfill, Sparks, Nevada
4.0	<b>Sierra Disposal Service</b>	Western El Dorado Recovery Systems, Diamond Springs, CA	Kiefer Landfill, Sacramento, California Forward Landfill, Manteca, California
5.0	<b>South Tahoe Refuse Company</b>	South Tahoe Refuse Transfer Station, South Lake Tahoe, CA	Lockwood Landfill, Sparks, Nevada
C	<i>Tahoe-Truckee Sierra Disposal Company</i>		
6.0	<b>Tahoe-Truckee Sierra Disposal</b>	Eastern Regional Transfer Station/MRF, Placer County, California	Lockwood Landfill, Sparks, Nevada

charged to County customers range from \$68.00 per ton to \$78.40 per ton for compacted mixed solid waste. The current mean County tipping fee is \$73.20 per ton.

In the County, franchise companies use different approaches to manage materials once collected. All companies transfer materials collected to a MRF/transfer station first. The County ultimately exports all solid waste out of the County for landfill disposal. In **Table 2-7**, above, we provide a summary of the waste management approaches, and processes, employed by each County franchise company.

All franchised companies use MRF/transfer stations to sort materials, and then transfer refuse to landfills for disposal. Western El Dorado

Recovery Systems consolidates and transfers refuse to Kiefer Landfill located at Sacramento, California; and Forward Landfill, located at Manteca, California. The Western Amador Recovery Facility consolidates and transfers refuse to Forward Landfill, located at Manteca, California. The South Tahoe Refuse Transfer Station/MRF and the Eastern Regional Transfer Station/MRF consolidate and transfer refuse to Lockwood Landfill, located at Sparks, Nevada.

American River Disposal Service and South Tahoe Refuse Company do not require customers to sort recyclables and yard waste, and instead sorts all of the materials at its Materials Recovery Facility (MRF), or “dirty MRF” in the City of South Lake Tahoe. The South Tahoe

Refuse Company has approached the County to discuss a franchise extension associated with undertaking new capital investments at the South Lake Tahoe MRF.

Waste Connections collects and processes recyclable and yard waste materials at its Western El Dorado Recovery Systems (WERS), a “dirty” Materials Recovery Facility (MRF), located at Diamond Springs. The WERS facility was not originally designed to handle its current material throughput requirements and without additional investment in the WERS facility, Waste Connections faces some potential future operational limitations with handling projected West County growth (e.g., tight self-haul drop off/turnaround areas, larger weekend traffic volumes on City streets, limited material storage areas, and small overall site footprint). Waste Connections also has recently requested from the County a fifteen-year franchise extension to recover the investment required to relocate its facilities.

### E. Summary of Solid Waste Rate and Service Levels

#### 1. Residential Solid Waste Rates

County residential solid waste collection rate structures vary depending on whether services are for a can system or a cart system. For the can system, in most service areas, the County has more linear rate structures, with relatively equal rate differences between the 1, 32-gallon can service level, and the 1, 45-gallon can service level, and between the 1, 45-gallon can service level and the 2, 32-gallon cans service level.

Within the companies offering can service, the relatively linear relationships (as measured by the increase in the rate, and gallons of service, with each can service level increase in the rate structure) are as follows:

- In the area served by Amador Disposal Service, for a 20 percent rate increase,

customers receive 13 gallons more for their refuse service; and for a 23 percent rate increase, customers receive 19 gallons more for their refuse service

- In the City of Placerville, served by El Dorado Disposal Services, for an 18 percent rate increase, customers receive 13 gallons more for their refuse service; and for a 33 percent rate increase, customers receive 19 gallons more for their refuse service
- In the County Unincorporated area, served by El Dorado Disposal Services, for a 14 percent rate increase, customers receive 13 gallons more for their refuse service; and for a 33 percent rate increase, customers receive 19 gallons more for their refuse service
- In the service area served by American River Disposal Service, for a 16 percent rate increase, customers receive 13 gallons more for their refuse service; and for a 16 percent rate increase, customers receive 19 gallons more for their refuse service
- In the service area served by Sierra Disposal Service, for a 21 percent rate increase, customers receive 13 gallons more for their refuse service; and for an 18 percent rate increase, customers receive 19 gallons more for their refuse service
- In the service area served by Tahoe-Truckee Sierra Disposal Company, for a 34 percent rate increase, customers receive 32 gallons more for their refuse service.

Although, not all these relationships are perfect linear ratios based on the increase in gallons, the County has relatively linear rate structures for its can service system, except that South Tahoe Refuse Company has a fixed rate for unlimited can service.

For the cart service system, the County has mixed rate structures for the 64-, and 96-gallon cart service levels offered by its franchise companies. (Only El Dorado Hills has the 35-gallon cart service level available.)

---

Some County companies charge a similar rate for all cart sizes in the cart service system. For example, in Cameron Park CSD, and County Unincorporated area, both served by El Dorado Disposal Services, the 64-gallon cart rates are very similar to the 96-gallon cart rates, with only a 2 percent, and 6 percent, respectively, larger cart size rate increase for both areas, so customers may have little incentive to select the cart size most appropriate for their refuse generation level.

For the areas served by Amador Disposal Service, and El Dorado Hills (served by El Dorado Disposal Services), the rate structures are more linear, with much larger rate differences between the cart service levels, as follows:

- In the area served by Amador Disposal Service, there is a 23 percent rate increase, between the 2, 32-gallon cans and 1, 96-gallon cart service levels
- In El Dorado Hills, served by El Dorado Disposal Services, there is an 8 percent rate increase, between the 35- and 64-gallon cart service levels; and a 40 percent rate increase, between the 64- and 96-gallon service levels.

In these two areas, customers may have more price incentive to select the cart size most appropriate for their refuse generation level. More price incentives are built in the cart service system in these two areas.

For mean County residential solid waste collection overall, the relationships between rate increases and service levels are as follows:

- There is a 18 percent rate increase between 1, 32-gallon can service and 1, 45-gallon can service, with a 13 gallon increase in service level
- There is a 22 percent rate increase between 1, 45-gallon can service and 2, 32-gallon cans service, with a 19 gallon increase in service level
- There is a 14 percent rate increase between 2, 32-gallon cans service and 1,

64-gallon cart service, changing from can service to cart service

- There is a 2 percent rate increase between 1, 64-gallon cart service and 1, 96-gallon cart service, with a 32 gallon increase in service level.

When examining mean rates, there are relatively linear increases between County residential can service levels, so much more price incentives are effectively built into the County's can system.

For the cart system, when examining mean rates, the County has an effectively non-linear, more closely grouped rate structure, with much smaller rate differences between the 64- and 96-gallon cart service levels, so customers may have little price incentive to choose the 64-gallon cart service.

For mean County residential solid waste collection overall, the County has the following equivalent per gallon rates:

- 1, 32-gallon can: 50¢
- 1, 45-gallon can: 42¢
- 2, 32-gallon can: 36¢
- 1, 64-gallon cart: 41¢
- 1, 96-gallon cart: 28¢.

The 32-gallon can service is nearly two times more expensive, per gallon, than the 96-gallon cart service. In general, the rate per gallon decreases, as the can or cart size increases.

## 2. Residential Solid Waste Services

For refuse service, the County basically has a can system, with some cart service levels offered only by the two Waste Connections of California subsidiaries, in their more urban areas. For over two-thirds of the County franchised unincorporated areas, there is no refuse cart service available. The County currently has a legacy-system for its residential refuse collection, and is just starting to move toward a more

modern cart-based refuse collection system where it makes sense in the more urban areas.

For curbside recycling services, the County has some areas with a bag system, and some biweekly cart service offered only by El Dorado Disposal Services. Again, the County is just starting to move toward a more modern curbside cart-based recycling collection system where it makes sense in the more urban areas.

The County doesn't have yard waste service, except for the areas served by El Dorado Disposal Services. In addition, the County employs a yard waste burn option. With the burn option available, many County customers may not need curbside yard waste service, however, for a more effective and efficient solid waste collection system, the County may need to move toward a curbside cart-based yard waste collection system for some of its outlying West Slope areas.

### 3. West Slope versus East Slope Residential Solid Waste Services and Rates

For County residential solid waste collection, the rate structures and service levels are different between the West Slope and East Slope service areas. In the West Slope service areas, there are can systems, and some cart systems, for residential refuse collection services; bag and some cart systems for residential curbside recycling collection services; and some cart service for residential curbside yard waste collection services. The rate structures are not uniform in the West Slope service areas, with both linear and more tightly grouped rate structures depending on if the services are for a can or cart system.

In the East Slope service areas, there is only a can system for residential refuse collection

services, with some bag recycling, and without any residential curbside yard waste collection service. The rate structures are relatively uniform in the East Slope service areas, with linear rate structures for the can service systems.

### 4. Commercial and Industrial Solid Waste Services

County commercial solid waste service rates have linear rate structures within each franchise company, across the service levels. However, across its franchise companies, there is no pattern for County commercial solid waste rates.

The County has very large commercial rate differences across the franchise companies for the same service level. For example, for the 1 cubic yard, 1 time per week service level, the rates vary from the lowest of \$14.16, to the highest of \$76.82. County commercial rate data are very heterogeneous, without normal distributions. Differences between the highest and lowest rates are even larger than the mean rates for each service level category. The County currently doesn't have any uniform system for its commercial rates.

County industrial solid waste rates are much more uniform than commercial rates. Also, they are fairly linear in nature.

There is not a single landfill within the County to receive County solid waste generated from residential, commercial, and industrial services. The County currently exports all of its solid waste out of the County for landfill disposal, to three (3) counties (one in Nevada, and two in California), including Washoe (Nevada), Sacramento, and San Joaquin.

**Section 3**  
**Solid Waste Rate and Service Levels**  
**and Comparisons between the**  
**County and Selected Jurisdictions**

### 3. Solid Waste Rate and Service Levels and Comparisons between the County and Selected Jurisdictions

This section includes analyses of El Dorado County solid waste collection systems in comparison to other surveyed jurisdictions. We worked with County staff to agree on the format and content of these comparative surveys. We identified a set of fourteen (14) jurisdictions to compare with El Dorado County.

**Appendix A** provides the fourteen comparative jurisdiction supporting data for the comparisons made in this section. Appendix A also identifies the characteristics of these comparative jurisdictions.

Based on our survey results, we provide summary statistics for the fourteen surveyed jurisdictions, for residential, commercial, and industrial sectors. For each sector, we calculate statistics, such as the average, median, minimum and maximum, and number of rates, for each service level category.

For our comparative analyses, we developed a set of matrices that show rate differences between the County and the comparative jurisdictions. We compared rates and service levels for each sector. For each sector, we compared various statistics, under each service level category, by absolute difference, and by percent difference. Our analyses included comparisons between the County and the comparative jurisdictions, comparisons between each County area and the comparative jurisdictions, and comparisons between each County area and the County average.

The remainder of this section is organized as follows:

- A. *Residential Solid Waste Collection Comparisons*
  - 1. *Comparative Jurisdictions*
  - 2. *Comparisons between County and Surveyed Jurisdictions*
  - 3. *Similar Rate Structure Jurisdiction Comparisons*
  - 4. *Comparisons between Each County Area and Surveyed Jurisdictions*
  - 5. *Comparisons within County*
- B. *Commercial Solid Waste Collection Comparisons*
  - 1. *Comparative Jurisdictions*
  - 2. *Comparisons between County and Surveyed Jurisdictions*
  - 3. *Comparisons between Each County Area and Surveyed Jurisdictions*
  - 4. *Comparisons within County*

C. Industrial Solid Waste Collection Comparisons

1. Comparative Jurisdictions
2. Comparisons between County and Surveyed Jurisdictions
3. Comparisons between Each County Area and Surveyed Jurisdictions
4. Comparisons within County

D. Tipping Fee Comparisons

E. Summary of Solid Waste Collection Comparisons

1. Residential Solid Waste Rate Comparisons
2. Residential Solid Waste Service Level Comparisons
3. Commercial Solid Waste Comparisons
4. Industrial Solid Waste Comparisons
5. Residential Solid Waste Rates of Neighboring Sacramento County.

## A. Residential Solid Waste Collection Comparisons

### 1. Comparative Jurisdictions

For residential services, we surveyed fourteen (14) comparative jurisdictions, for their 20-, 32-, 64-, 96-gallon can and cart service levels, as shown in Exhibit A-2, Appendix A. Since many jurisdictions had various service areas, based on our survey results, we calculated a mean residential rate for each of the fourteen jurisdictions surveyed, for each rate category, including 1, 32-gallon can, 1, 32-gallon cart, 2, 32-gallon cans, 1, 64-gallon cart, 3, 32-gallon cans, and 1, 96-gallon cart service levels, and summarized these means, in **Table 3-1**, on the next page. We didn't include the 20-gallon can/cart service level, because only a few jurisdictions provided this service level, and El Dorado County did not provide this service level.

Based on the fourteen jurisdiction means, for each of the six service levels, we calculated various statistics, such as the mean of all jurisdictions surveyed, median of jurisdiction means, minimum and maximum of jurisdiction means, as well as

mean without the highest and lowest rates, which eliminates those outliers that drive the overall mean.

Comparative jurisdiction mean residential solid waste collection rates, per customer, per month, were as follows:

- 1, 32-gallon can: \$17.59
- 1, 32-gallon cart: \$19.67
- 2, 32-gallon cans: \$23.99
- 1, 64-gallon cart: \$26.55
- 3, 32-gallon cans: \$31.39
- 1, 96-gallon cart: \$33.06.

Comparative jurisdiction mean residential solid waste collection rates, without the highest and lowest rates, per customer, per month, were as follows:

- 1, 32-gallon can: \$17.38
- 1, 32-gallon cart: \$19.83
- 2, 32-gallon cans: \$23.67
- 1, 64-gallon cart: \$26.69
- 3, 32-gallon cans: \$30.61
- 1, 96-gallon cart: \$32.60.

These two sets of comparative mean residential rates were almost identical to each other for each service level. Therefore the highest and lowest rates shouldn't be concerns for our analyses.

Our data show that the median residential rates were close to the mean residential rates. This implies that our survey data have fairly normal distributions.

Jurisdictions employ different rate setting methodologies, and have different rate structures. Also, different franchised haulers have different operating and capital costs. Some counties have more linear rate structures, in which rates vary relatively widely. For example, in our residential rate survey, Monterey County, Sutter County, and Yuba County had more linear rate structures, with large incremental differences between service levels. Some

	Mean of Unincorporated El Dorado County Franchise Areas	\$16.08	–	\$23.07	\$26.26	–	\$26.81

<sup>a</sup> This mean was calculated based on the 11 jurisdictions in Table 3-1 excluding Monterey County, Sutter County, and Yuba County.

counties have more tightened rate structures, in which rates vary relatively little. For example, in our residential rate survey, Amador County has this kind of rate structure, with tightened residential rates, such as \$19.08 for 1, 32-gallon cart; \$24.08 for 1, 64-gallon cart; and \$26.88 for 1, 96-gallon

cart. El Dorado County also is a county with tightened rate structures.

Comparisons made among similar rate structure jurisdictions might produce more meaningful findings. Therefore, we excluded three (3) counties

with linear rate structures, including Monterey County, Sutter County, and Yuba County, from the fourteen surveyed jurisdictions, and developed another set of comparative jurisdictions mean residential solid waste collection rates of eleven (11) jurisdictions with similar rate structure to El Dorado County, which had a tightened rate structure. Mean residential solid waste collection rates of these eleven jurisdictions, with rate structures similar to El Dorado County, per customer, per month, were as follows:

- 1, 32-gallon can: \$16.61
- 1, 32-gallon cart: \$17.64
- 2, 32-gallon cans: \$22.12
- 1, 64-gallon cart: \$23.90
- 3, 32-gallon cans: \$28.77
- 1, 96-gallon cart: \$28.66.

## 2. Comparisons between County and Surveyed Jurisdictions

We compared residential solid waste collection rates between El Dorado County and the fourteen surveyed jurisdictions, for four (4) service levels, including:

- 1, 32-gallon can
- 2, 32-gallon cans
- 1, 64-gallon cart
- 1, 96-gallon cart.

We did not compare the County's 45-gallon can rates against the other jurisdictions, because there was not sufficient data available. For the subset comparisons, we compared County mean versus comparative jurisdiction means; County mean versus comparative jurisdiction means without outliers; and County median versus comparative jurisdiction medians, respectively. These comparisons are included in **Table 3-2, Table 3-3, and Table 3-4**, on the next page.

In Table 3-2, we compared the County mean with the comparative jurisdiction means, for each of the four service levels, for residential services. County residential average rates were slightly below comparative jurisdiction average rates for the 2, 32-gallon cans, and 1, 64-gallon cart service levels, and well below comparative jurisdiction average rates for the 1, 32-gallon can, and 1, 96-gallon cart service levels, as follows:

- For the 1, 32-gallon can service level, the County average rate was below the average of comparative jurisdiction rates, by 8.58 percent, or \$1.51
- For the 2, 32-gallon cans service level, the County average rate was slightly below the average of comparative jurisdiction rates, by 3.83 percent, or \$0.92
- For the 1, 64-gallon cart service level, the County average rate was slightly below the average of comparative jurisdiction rates, by 1.09 percent, or \$0.29
- For the 1, 96-gallon cart service level, the County average rate was dramatically below the average of comparative jurisdiction rates, by 18.91 percent, or \$6.25.

Outliers, such as the highest and lowest rates, might drive different results. Therefore, we excluded the highest and lowest comparative jurisdiction rates, and compared the County mean rates against the mean of the rest of the comparative jurisdictions, for each of the four residential service levels. Table 3-3 shows similar results as before, which further confirms our previous comparisons. County residential average rates were still slightly below comparative jurisdiction average rates for the 2, 32-gallon cans, and 1, 64-gallon cart service levels, and well below jurisdiction average rates for the 1, 32-gallon can and 1, 96-gallon cart service levels.

In Table 3-4, we compared the County median with the comparative jurisdiction medians, for each of the four service levels, for residential services. County residential median rates were slightly above

the jurisdiction median rate for the 1, 64-gallon cart service level, and well below jurisdiction median rates for the 1, 32-gallon can, 2, 32-gallon cans and 1, 96-gallon cart service levels.

Generally, County residential rates were below average compared to comparative jurisdictions, particularly for higher service level, such as 1, 96-gallon cart. This is likely because many of these other jurisdictions have specifically designed significantly higher rates for the larger cart sizes to discourage customers from using these service levels.

**3. Similar Rate Structure Jurisdiction Comparisons**

Perhaps a better rate comparison is provided in **Table 3-5**, above, where we compared County residential rates with the eleven jurisdictions that have rate structures more like the rate structures the County has.

For this subset comparison, we compared the County mean with the similar rate structure jurisdiction means, for each of the four service levels. We found County residential rates were above averages of comparative jurisdictions with

similar rate structures, for the 2, 32-gallon cans, and 1, 64-gallon cart service levels; however, for the 1, 32-gallon can, and 1, 96-gallon cart service levels, County rates were still below these jurisdictions, as follows:

- For the 1, 32-gallon can service level, the County average rate was slightly below the average of similar rate structure comparative jurisdiction rates, by 3.19 percent, or \$0.53
- For the 2, 32-gallon cans service level, the County average rate was slightly above the average of similar rate structure comparative jurisdiction rates, by 4.29 percent, or \$0.95
- For the 1, 64-gallon cart service level, the County average rate was well above the average of similar rate structure comparative jurisdiction rates, by 9.87 percent, or \$2.36
- For the 1, 96-gallon cart service level, the County average rate was well below the average of similar rate structure comparative jurisdiction rates, by 6.45 percent, or \$1.85.

Even after we compared rate differences between the County and those comparative jurisdictions with more tightly grouped rate structures, we still found County residential rates, for the 96-gallon cart service level, were below average of comparative jurisdictions, and County rates for the other service levels were very comparable.

#### 4. Comparisons between Each County Area and Surveyed Jurisdictions

In addition to our county versus county level comparisons, we compared each County area residential solid waste collection rate with the comparative jurisdiction rates. For the subset comparisons, we compared each County area rate with the comparative jurisdiction means, for all four service levels, as in the previous comparisons. These comparisons are shown in **Table 3-6**, on the next page.

In Table 3-6, we compared County residential rates with the comparative jurisdiction means, for each County area. Among the nine franchise areas, there were five companies/areas with residential rates below the comparative jurisdiction average rates across the four service levels, including:

- Amador Disposal Service
- El Dorado Disposal Services, Cameron Park Area
- American River Disposal Service
- South Tahoe Refuse Company
- Tahoe-Truckee Sierra Disposal.

In the four areas served by El Dorado Disposal Services, residential rates generally were above the comparative jurisdiction average rates, for the can service levels, and below the comparative jurisdiction average rates, for the cart service levels, in general.

For the 64-gallon cart, and 96-gallon cart service level, all County company/area residential rates were below the comparative jurisdiction

average rates. This corresponds to what we found in the previous county level comparisons that the County average cart residential rates were below the comparative jurisdiction rates.

#### 5. Comparisons within County

Previous comparisons show relationships between County rates and the other jurisdictions rates. In this subset of comparisons, we compared each County area rate with the County average rate, for four service levels, in **Table 3-7**, on page 3-9.

Table 3-7 shows whether the franchise area rate was below or above the County average. Among the nine franchise areas, there were three areas with residential rates below the County average rates, across the offered service levels, including:

- Amador Disposal Service
- El Dorado Disposal Services, Cameron Park Area
- American River Disposal Service.

There were three areas with residential rates above the County average rates, across the offered service levels, including:

- El Dorado Disposal Services, Unincorporated County Areas
- Sierra Disposal Service
- South Tahoe Refuse Company.

### B. Commercial Solid Waste Collection Comparisons

#### 1. Comparative Jurisdictions

For commercial services, we surveyed fourteen (14) comparative jurisdictions, for 2-yd (1 time per week), 2-yd (2 times per week), 3-yd (1 time per week), 3-yd (2 times per week), 4-yd (1 time per week), and 6-yd (1 time per week) service levels, as shown in Exhibit A-4, Appendix A. Since many jurisdictions had various service areas, based on our

	Median	\$150.26	\$266.96	\$198.39	\$333.58	\$247.02	\$292.04
	Minimum	\$64.16	\$109.81	\$69.15	\$123.91	\$86.32	\$116.09
	Maximum	\$226.32	\$387.28	\$290.87	\$503.64	\$371.92	\$462.33
	Mean without Highest and Lowest Rates	\$131.17	\$233.25	\$173.32	\$312.58	\$208.37	\$294.16
	Number of Rates	11	11	12	12	10	10
	Mean of Unincorporated El Dorado County Franchise Areas	\$73.46	\$185.72	\$116.35	\$228.36	\$152.49	\$215.50

survey results, we calculated a mean commercial rate for each jurisdiction surveyed, under each of the rate categories. We summarized these means in **Table 3-8**, above.

Based on the fourteen jurisdiction means, for each of the six service levels, we calculated various statistics, such as the mean of all jurisdictions surveyed, median of jurisdiction means, minimum

and maximum of jurisdiction means, as well as means without the highest and lowest rates, which eliminates those outliers that drive the overall mean.

Comparative jurisdiction mean commercial solid waste collection rates, per customer, per month, were as follows:

- 2-cubic yard, 1 time per week: \$133.34
- 2-cubic yard, 2 times per week: \$235.61

- 3-cubic yard, 1 time per week: \$174.28
- 3-cubic yard, 2 times per week: \$312.75
- 4-cubic yard, 1 time per week: \$211.83
- 6-cubic yard, 1 time per week: \$293.34.

Comparative jurisdiction mean commercial solid waste collection rates, without the highest and lowest rates, per customer, per month, were as follows:

- 2-cubic yard, 1 time per week: \$131.17
- 2-cubic yard, 2 times per week: \$233.25
- 3-cubic yard, 1 time per week: \$173.32
- 3-cubic yard, 2 times per week: \$312.58
- 4-cubic yard, 1 time per week: \$208.37
- 6-cubic yard, 1 time per week: \$294.16.

These two sets of mean commercial rates were almost identical to each other for each service level. Therefore the highest and lowest rates should not be concerns for our analyses.

## 2. Comparisons between County and Surveyed Jurisdictions

We compared commercial solid waste collection rates between the County, and the fourteen (14) surveyed jurisdictions for six (6) service levels, including:

- 2-cubic yard, 1 time per week
- 2-cubic yard, 2 times per week
- 3-cubic yard, 1 time per week
- 3-cubic yard, 2 times per week
- 4-cubic yard, 1 time per week
- 6-cubic yard, 1 time per week.

We did not compare the County's 1-cubic yard (1 time per week), 1-cubic yard (2 times per week), 4-cubic yard (2 times per week), and 6-cubic yard (2 times per week) rates against the other jurisdictions, because the six service levels included

in our comparison were the most common service levels offered by the other jurisdictions. For the subset comparisons, we compared County mean versus comparative jurisdiction means, and County mean versus comparative jurisdiction means without outliers, respectively, as shown in **Table 3-9** and **Table 3-10**, on the next page.

In Table 3-9, we compared the County mean with the comparative jurisdiction means, for commercial services. County commercial average rates were well below jurisdiction average rates, across all six service levels in the comparison, as follows:

- For the 2-cubic yard, 1 per week, service level, the County average rate was dramatically below the average of other comparative jurisdiction rates, by 44.91 percent, or \$59.88
- For the 2-cubic yard, 2 times per week, service level, the County average rate was substantially below the average of other comparative jurisdiction rates, by 21.17 percent, or \$49.89
- For the 3-cubic yard, 1 time per week, service level, the County average rate was substantially below the average of other comparative jurisdiction rates, by 33.24 percent, or \$57.93
- For the 3-cubic yard, 2 times per week, service level, the County average rate was well below the average of other comparative jurisdiction rates, by 26.98 percent, or \$84.39
- For the 4-cubic yard, 1 time per week, service level, the County average rate was well below the average of other comparative jurisdiction rates, by 28.01 percent, or \$59.34
- For the 6-cubic yard, 1 time per week, service level, the County average rate was well below the average of other comparative jurisdiction rates, by 26.54 percent, or \$77.84.

### 3. Solid Waste Rate and Service Levels and Comparisons between the County and Selected Jurisdictions

Outliers, such as the highest and lowest rates, might drive different results. Therefore, we excluded the highest and lowest comparative jurisdiction rates, and compared the County mean against the mean of the rest of the comparative jurisdictions, for commercial

services, in Table 3-10 above. Results were similar to those in Table 3-9, which further confirmed our previous findings, that County commercial average rates were still well below jurisdiction average rates, across all six service levels in the comparison.

---

Generally, County commercial rates were lower compared to the other comparative jurisdictions, for all six service levels in our comparisons, and particularly for the 2-cubic yard (1 time per week), and 3-cubic yard (1 time per week) service levels.

### 3. Comparisons between Each County Area and Surveyed Jurisdictions

We compared commercial solid waste collection rates of each County franchise area with the comparative jurisdiction rates. For this subset comparison, we compared each County area rate with the comparative jurisdiction mean rate, for all six service levels, as shown in **Table 3-11**, on the next page.

As shown in Table 3-11, there were four franchise areas with commercial rates below the comparative jurisdiction average rates across all the offered service levels, including:

- Amador Disposal Service
- American River Disposal Service
- Sierra Disposal Service
- South Tahoe Refuse Company.

One of these four franchise areas is served by Waste Connections of California, and the other three areas are served by South Tahoe Refuse Company. For the three areas served by South Tahoe Refuse Company, the commercial solid waste collection rates were dramatically below the other comparative jurisdictions, ranging from 42 percent to 79 percent less, depending on the company and service level.

In the four areas served by El Dorado Disposal Services, commercial rates were above the comparative jurisdiction average rates (2 percent to 29 percent), for most service levels, and below the average rates (0.3 percent to 13 percent), for the lower service levels, such as 2-cubic yard (1 time per week).

In the area served by Tahoe-Truckee Sierra Disposal, commercial rates were above the comparative jurisdiction average rates, ranging from 12 percent to 23 percent, more.

### 4. Comparisons within County

Previous comparisons show relationships between County rates and the other jurisdiction rates. In order to determine whether a particular franchise area's rates were below or above the overall County average rates, we compared each franchise area rate with the County average rate, for six service levels, in **Table 3-12**, on page 3-15.

Areas served by Waste Connections and Tahoe-Truckee Sierra Disposal had commercial solid waste collection rates above the County average, with one exception, for the 6-cubic yard (1 time per week) rate of Amador Disposal Service. These six areas included:

- Amador Disposal Service
- El Dorado Disposal Services, Cameron Park Area
- El Dorado Disposal Services, City of Placerville Area
- El Dorado Disposal Services, El Dorado Hills Area
- El Dorado Disposal Services, Unincorporated County Area
- Tahoe-Truckee Sierra Disposal.

Areas served by three South Tahoe Refuse Company subsidiaries had commercial rates well below the County average, ranging from 21 percent to 70 percent below, as follows:

- American River Disposal Service
- Sierra Disposal Service
- South Tahoe Refuse Company.

## C. Industrial Solid Waste Collection Comparisons

### 1. Comparative Jurisdictions

For industrial services, we surveyed fourteen (14) comparative jurisdictions, for 20-, and 30-cubic yard drop box service levels. Using the same method as applied to our analyses for residential and commercial services, based on our survey results, we calculated a mean industrial rate for

each jurisdiction surveyed, for both 20-, and 30-cubic yard drop box service levels. We summarized these averages in **Table 3-13**, above.

Based on the fourteen jurisdiction means, for each service level, we calculated various statistics, such as the mean of all jurisdictions surveyed, median of jurisdiction means, minimum and maximum of jurisdiction means, as well as the mean without the highest and lowest rates. Comparative jurisdiction

---

mean industrial solid waste collection rates, per pick up, were as follows:

- 20-cubic yard drop box: \$313.83
- 30-cubic yard drop box: \$375.05.

Comparative jurisdiction mean industrial solid waste collection rates, without the highest and lowest rates, per customer, per month, were as follows:

- 20-cubic yard drop box: \$314.73
- 30-cubic yard drop box: \$369.85.

These two sets of mean industrial rates were almost identical to each other for each service level. Therefore the highest and lowest rates should not be concerns for our analyses.

## 2. Comparisons between County and Surveyed Jurisdictions

We compared industrial solid waste collection rates between the County and the fourteen (14) surveyed jurisdictions for two (2) service levels, including:

- 20-cubic yard drop box
- 30-cubic yard drop box.

For this subset comparison, we compared the County mean with the comparative jurisdictions mean, and County mean versus comparative jurisdiction mean. These comparisons are shown in **Table 3-14** and **Table 3-15**, on the next page.

In Table 3-14, we compared the County mean with the comparative jurisdiction means, for industrial services. County industrial average rates were above jurisdiction average rates for the 20-cubic yard drop box, and 30-cubic yard drop box service levels, as follows:

- For the 20-cubic yard drop box service level, the County average rate was above the average of other comparative jurisdiction rates, by 13.64 percent, or \$42.81
- For the 30-cubic yard drop box service level, the County average rate was above the

average of other comparative jurisdiction rates, by 38.59 percent, or \$144.73.

Outliers, such as the highest and lowest rates, might drive different results. Therefore, we excluded the highest and lowest comparative jurisdiction rates, and compared the County mean against the mean of the rest of the comparative jurisdictions, for industrial services. Similar to our results above, County industrial average rates were still above jurisdiction average rates for the 20-cubic yard drop box, and 30-cubic yard drop box service levels.

Generally, County industrial rates were higher compared to the other comparative jurisdictions, for the 20-cubic yard drop box, and 30-cubic yard drop box service levels.

## 3. Comparisons between Each County Area and Surveyed Jurisdictions

In addition to our county level comparisons, we compared each County area industrial solid waste collection rates with the comparative jurisdiction rates. For this subset comparison, we compared each franchise area rate with the comparative jurisdiction means, for the two service levels, as shown in **Table 3-16**, on page 3-19. Among the franchise areas, there was no data available for Tahoe-Truckee Sierra Disposal.

As shown in Table 3-16, all areas had industrial rates above the comparative jurisdiction average rates, for both service levels.

## 4. Comparisons within County

Previous comparisons reveal relationships between County rates and the other jurisdiction rates. To determine whether a particular franchise area's rates were below or above the overall County average rates, in this subset of comparison, we compared each franchise area rate with the County average rate, for two service levels, in **Table 3-17**, on page 3-20.

**Table 3-14**

Number of Rates	5	11	5	11

Table 3-17 shows whether the franchise area rate was below, or above, the County average. All areas, except for Sierra Disposal Service and STR’s 30-cubic yard service, had industrial rates below the County average rates, for both service levels. In the area served by Sierra Disposal Service, industrial rates were above the County average rates, for both service levels.

### D. Tipping Fee Comparisons

For transfer station and landfill tipping fees, we surveyed fourteen (14) comparative jurisdictions, the same as for the comparative jurisdiction rate and service level surveys, as shown in Exhibit A-6, Appendix A. A summary of comparative jurisdiction tipping fees is provided in **Table 3-18**, on page 3-21. Comparative jurisdiction mean transfer station tipping fees, per ton, were \$65.90, and median

transfer station tipping fees, per ton, were \$58.00. Comparative jurisdiction transfer station tipping fees per ton ranged from \$28.00 to \$146.95.

We compared transfer station tipping fees between the County and the comparative jurisdictions, in **Table 3-19**, above. The average tipping fees of the transfer stations used by the County franchise companies was above the comparative jurisdiction average tipping fee by 11.08 percent, or \$7.30 per ton.

## E. Summary of Solid Waste Collection Comparisons

### 1. Residential Solid Waste Rate Comparisons

County residential rates were consistently fairly competitive, across all service levels, compared to comparative jurisdictions, which have similar solid waste collection systems, demographics, and/or geographic terrain characteristics to the County. County mean residential rates were slightly below the comparative jurisdiction mean rates, for the 2, 32-gallon cans, and 1, 64-gallon cart service levels; and well below the comparative jurisdiction mean rates, for the 1, 32-gallon can, and 1, 96-gallon service levels. Particularly for the largest cart service level, the 1, 96-gallon cart, the County residential rates were less than the comparative jurisdiction rates, by approximately 19 percent.

Rate variations between different service levels tend to be larger for the more linear rate structures, in which rates vary more widely. El Dorado County has a more tightly grouped residential rate structure, so it may not be unusual that County rates are lower than linear rate structure comparative jurisdictions. We compared the County residential rates with a set of eleven jurisdictions that had a similar rate structure to the County. All these jurisdictions had more tightly grouped rate structures, without large rate increments between service levels. We found that even compared to similar rate structure comparative jurisdictions, County mean residential rates were still low for the 1, 32-gallon can service level, by approximately 3 percent, and for the 1, 96-gallon cart service level, by approximately 6 percent. For the other County service levels, County rates were only slightly above averages.

We also assessed some reasons for differences between County rates and our comparative jurisdictions by examining whether residential

rate differences were specific to a given company. We found that residential rates were consistently low, for four of the six unincorporated County franchise areas, with the exception of El Dorado Disposal Services unincorporated County area, and Sierra Disposal Service, compared to the comparative jurisdictions, for both can and cart service levels. In the four areas served by El Dorado Disposal Services, rates were still below averages for the 64-, and 96-gallon cart service levels; but El Dorado Disposal Services rates were above averages for the 1, 32-gallon can, and 2, 32-gallon cans service levels, with the exception of the 1, 32-gallon can rate in the City of Placerville.

Based on our comparisons, we conclude that County residential rates were generally consistently competitive, across all service levels, both can and cart, and across all companies. The exception to this was for the can service rates offered by El Dorado Disposal Services, in El Dorado Hills CSD, and the Unincorporated County area, and Sierra Disposal Service.

## 2. Residential Solid Waste Service Level Comparisons

Among the comparative jurisdictions, for residential refuse service, many jurisdictions have already implemented a cart-based system (with three cart size options), and some jurisdictions continue also to provide can service. In contrast, the County basically still has a can-based system, with cart services offered by the two Waste Connections companies, in urban areas.

For residential curbside recycling service, most comparative jurisdictions have provided curbside cart-based recycling services. The County has some bag-systems for curbside recycling and some biweekly cart service offered only by El Dorado Disposal Services. In some areas, there is no curbside recycling service provided, instead material is sorted at a MRF.

For residential curbside yard waste service, many comparative jurisdictions have provided curbside cart-based yard waste service; and some provide bag, can, or bundle services. In the County, the curbside yard waste service is limited to the Western urban portion areas, served by El Dorado Disposal Services. The County doesn't have curbside yard waste service for most of the County areas, instead employing a yard waste burn option. Where feasible and practical, a systematic, single stream, cart-based refuse service; cart-based curbside recycling, and cart-based yardwaste program should be considered in future planning for a County-wide waste management system.

## 3. Commercial Solid Waste Comparisons

We compared commercial rates between the County and the comparative jurisdictions, for the most common six service levels. We found that County mean commercial rates were consistently low, across all six service levels. For the three lowest volume service levels, including 2 cubic yard (1 time per week), 2 cubic yard (2 times per week), and 3 cubic yard (1 time per week); the County rates were substantially below averages by approximately 33 percent to 45 percent depending on the service level. For the three highest volume service levels, including 3 cubic yard (2 times per week), 4 cubic yard (1 time week), and 6 cubic yard (1 time per week); the County rates were still below averages by approximately 27 percent.

We assessed some reasons for differences between County rates and the comparative jurisdictions by examining whether commercial rate differences were specific to a given company. We found that South Tahoe Refuse Company's three subsidiaries have below average commercial rates, or approximately less than half of jurisdiction averages, across all six service levels. For example, for the 2 cubic yard (1 time per week) service level, the rate differences range

from 57 percent to 79 percent below averages; for the 6 cubic yard (1 time per week) service level, the rate differences range from 42 percent to 71 percent below averages. These rate differences become larger as the service levels decrease.

In the County area served by Amador Disposal Service, rates were also below averages, ranging from 8 percent to 45 percent below averages. In addition, we found that in the four areas served by El Dorado Disposal Services, and the County area served by Tahoe-Truckee Sierra Disposal, rates were above averages for most of the service levels. The rate differences generally become larger as the service levels increase.

We conclude that overall County commercial rates were consistently low across all service levels. However, this is not true for every franchise company. The commercial rates were not consistently low for all companies. Among the six franchise companies, four (Amador Disposal Service, South Tahoe Refuse companies (3)) have below average commercial rates, and the other two franchise companies (El Dorado Disposal Services and Tahoe-Truckee Sierra Disposal) have above average commercial rates.

#### 4. Industrial Solid Waste Comparisons

Overall County industrial rates were above jurisdiction average rates for the 20 cubic yard drop box, and 30 cubic yard drop box, by approximately 14 percent, and 39 percent, respectively. For industrial service comparisons, we obtained the best data we could, because industrial service is not covered in the exclusive solid waste service franchise agreements in many jurisdictions, so many haulers don't have an exclusive industrial service franchise agreement with jurisdiction authority. For example, Merced County issues drop box permits to allow haulers to provide drop box service anywhere in Merced County. As a result, industrial services might be

performed by many non-franchised haulers, and rates might be more comparable in nature.

#### 5. Residential Solid Waste Rates of Neighboring Sacramento County

In this subsection, we provide residential solid waste rates and service levels, for the neighboring Sacramento County, which was not a formal "comparable" jurisdiction included in our rate and service level surveys. Sacramento County still has comparable disposal costs and landfill tipping fees, and pickup frequency, but it is a publicly owned and operated system.

Sacramento County currently has a weekly, three-can-based (e.g., 30-, 60-, and 90-gallon can) residential refuse service, in conjunction with alternating biweekly mixed recycling and yard waste services. The current Sacramento County residential solid waste rates are as follows:

- 1, 30-gallon can – \$16.55 per month
- 1, 60-gallon can – \$19.55 per month
- 1, 90-gallon can – \$25.55 per month.

The County of Sacramento recently proposed to increase the residential rates in its unincorporated county areas to offset increased operating expenses, for fuel, equipment maintenance, and labor. The proposed \$4.00 rate increases will be phased in gradually over a three-year period (2008 to 2010). At the end of the three-year period, by 2010, residential rates could be as follows, under Scenario One:

- 1, 30-gallon can – \$20.55 per month
- 1, 60-gallon can – \$23.55 per month
- 1, 90-gallon can – \$29.55 per month.

And under Scenario Two, residential rates could be as follows:

- 1, 30-gallon can – \$19.95 per month
- 1, 60-gallon can – \$23.55 per month
- 1, 90-gallon can – \$30.76 per month.

If the proposed rates are approved, one of these two proposed rate increase scenarios could be implemented. According to the Sacramento County Waste Management and Recycling Department, the rates after proposed increases would still be comparable, and less than other cities in the Sacramento area.

Average residential rates were \$16.08, \$23.07, and \$26.81, respectively, for the three equivalent service levels, including 1, 32-gallon can, 2, 32-gallon cans, and 1, 96-gallon cart, in El Dorado County. Compared to its neighboring Sacramento County, which has alleged comparable residential rates, the El Dorado County rates were about the same as current Sacramento County rates, for

the 1, 32-gallon can and 1, 96-gallon cart service levels, and only the 2, 32-gallon cans County average rate is close to the Sacramento County rate after the proposed Sacramento increases. The findings here further confirm our previous residential comparison results.

\* \* \* \* \*

Generally, El Dorado County has low rates for both residential and commercial solid waste services, compared to comparable jurisdictions. However, El Dorado County industrial service rates are above average compared to comparable jurisdictions.

**Section 4**  
**Solid Waste Rate and Service Level**  
**Comparisons between the**  
**County and Jurisdictions Meeting**  
**AB 939 Diversion Levels**

## 4. Solid Waste Rate and Service Level Comparisons between the County and Jurisdictions Meeting AB 939 Diversion Levels

In this section, we provide historical Assembly Bill 939 (AB 939) diversion levels for El Dorado County, as well as for a set of twelve (12) comparative jurisdictions. These twelve comparative jurisdictions have met the fifty (50) percent AB 939 diversion requirement. We also provide information for the residential solid waste rates and service levels, of these twelve comparable jurisdictions that exceeded the 50 percent AB 939 diversion requirement.

Among these twelve comparative jurisdictions, nine (9) of them overlap with the fourteen (14) jurisdictions used in our rate and service level comparisons (in Section 3). In addition to these nine jurisdictions, we identified three (3) additional jurisdictions that have also met the 50 percent AB 939 diversion requirement.

We calculated rate differences between County rates and rates of these comparable jurisdictions meeting the AB 939 goal. We examined to what degree these comparative jurisdictions use rate structure pricing incentives for customers to reduce refuse generation. We also identified rate and service level approaches these jurisdictions use to exceed the AB 939 goal.

The remainder of this section is organized as follows:

- A. *Historical Assembly Bill 939 Diversion Levels*
  - 1. *El Dorado County AB 939 Diversion Levels*
  - 2. *Comparative Jurisdiction AB 939 Diversion Levels*
- B. *Residential Solid Waste Collection Comparisons*
  - 1. *Comparative Jurisdictions*
  - 2. *Comparisons between County and Surveyed Jurisdictions*
  - 3. *Similar Rate Structure Jurisdiction Comparisons*
  - 4. *Comparisons between Each County Area and Surveyed Jurisdictions*
- C. *Summary of Residential Rate and Service Level Comparisons.*

### A. Historical Assembly Bill 939 Diversion Levels

#### 1. El Dorado County AB 939 Diversion Levels

Historical County AB 939 diversion levels, from 2000 to 2006, are shown in **Table 4-1**, on the next page. Among the three reporting jurisdictions in the County, in 2006, two of

**Table 4-1**  
**Historical Diversion Rates for El Dorado County**  
**(2000 to 2006)**  
**Solid Waste Rate and Service Study**  
**El Dorado County**

County	Jurisdiction	Diversion Rate (%)						
		2000	2001	2002	2003	2004	2005	2006*
El Dorado	El Dorado-Unincorporated	41	38	32	56	54	50	<b>53<sup>a</sup></b>
	City of Placerville	50	58	64	44	63	70	<b>80</b>
	City of South Lake Tahoe	42	48	32	41	54	46	42

\*Numbers shown in bold exceed the 50 percent AB 939 diversion goal in 2006.

Source: California Integrated Waste Management Board, Countrywide, Regionwide, and Statewide Jurisdiction Diversion Progress Report.

<sup>a</sup> The County has an additional five (5) percent biomass diversion credit for unincorporated El Dorado County.

them achieved the diversion requirement in 2006, with reported CIWMB diversion rates above the 50 percent AB 939 diversion goal, as follows:

- El Dorado-Unincorporated – 53 percent
- City of Placerville – 80 percent.

The City of South Lake Tahoe diversion rate was 42 percent in 2006, which was 8 percent below the AB 939 diversion goal set by the State.

**Figure 4-1**, on the next page, graphically shows historic County, seven-year diversion level trends for the three jurisdictions within the County. During this seven-year period, the County has worked to improve its diversion levels. In 2006, two County areas increased their diversion rates, compared to their 2005 rates, by three percent, and ten percent, respectively, for El Dorado-Unincorporated area, and the City of Placerville. However, in 2006, the diversion rate for the City of South Lake Tahoe declined to 42 percent, or eight percent below the 50 percent AB 939 goal.

Faced with several challenging solid waste management issues, such as geographic variability; urban and rural population mixes; and diverse climate conditions, the County has continuously tried to improve AB 939 diversion

levels. The County would like a County-wide system capable of moving beyond the current AB 939 goal in light of recent State proposals to increase the diversion requirements.

## 2. Comparative Jurisdiction AB 939 Diversion Levels

We identified a set of twelve (12) comparative jurisdictions that have met the 50 percent AB 939 diversion requirement in 2006. Among these twelve jurisdictions, nine (9) of them overlap with the fourteen (14) jurisdictions used in our rate and service level comparisons (in Section 3). In addition to these nine jurisdictions, we identified three other jurisdictions, including Solano County, Napa County, and Sonoma County, which have also met the 50 percent AB 939 diversion requirement.

A list of these twelve comparative jurisdictions is provided in Appendix B. Some of these California jurisdictions have some similar solid waste collection system characteristics as the County, such as similar populations, similar urban and rural mixes, split regional haulers, similar climates, or same service providers. Others are adjacent or neighboring counties.

**Figure 4-1**  
**Historical Diversion Rates for El Dorado County**  
**(2000 to 2006)**  
**Solid Waste Rate and Service Study**  
**El Dorado County**

In **Table 4-2**, on the next page, we show the historical AB 939 diversion rates, of the comparative jurisdictions exceeding the 50 percent AB 939 goal, as well as El Dorado County. These diversion rates are for the unincorporated areas within the comparative jurisdictions. All these jurisdictions, including El Dorado County, met the AB 939 diversion requirement in 2006. During the seven-year period, we found up-slope trends for the diversion levels of these jurisdictions. The mean diversion rates of these twelve jurisdictions, from 2000 to 2006, were as follows:

- 2000 Diversion Rate – 47 percent
- 2001 Diversion Rate – 52 percent
- 2002 Diversion Rate – 53 percent

- 2003 Diversion Rate – 52 percent
- 2004 Diversion Rate – 64 percent
- 2005 Diversion Rate – 60 percent
- 2006 Diversion Rate – 62 percent.

We compared historical AB 939 diversion rates, from 2000 to 2006, between the County and the comparative jurisdictions. **Figure 4-2**, on page 4-5, presents the comparison in the form of a histogram chart. Over the seven-year period, although the County diversion rates were above the 50 percent AB 939 diversion goal in the second half period, County diversion rates were below the average of the twelve comparative jurisdictions, except for year 2003, when the County diversion rate exceeded the jurisdiction mean by 4 percent.

<sup>a</sup> The County has an additional five (5) percent biomass diversion credit for unincorporated El Dorado County.

## B. Residential Solid Waste Collection Comparisons

### 1. Comparative Jurisdictions

We surveyed twelve comparative jurisdictions exceeding the 50 percent AB 939 goal, for their 20-, 32-, 64-, 96-gallon can and cart service levels. Nine of the jurisdictions overlap with the fourteen jurisdictions used in our rate and service level comparisons (in Section 3). In addition to these nine jurisdictions, we identified three other jurisdictions that also met the 50 percent AB 939 diversion requirement. We developed a set of matrices that show comparative residential solid waste rates and service levels for these jurisdictions exceeding the AB 939 goal.

Since many jurisdictions had various service areas, based on our survey results, we calculated a mean residential rate for each of the twelve jurisdictions surveyed, for 1, 32-gallon can, 1, 32-gallon cart, 2, 32-gallon cans, 1, 64-gallon cart, 3, 32-gallon cans, and 1, 96-gallon cart service levels. We summarized these means, in **Table 4-3**, on page 4-6. We did not include the 20-gallon can/cart service level, because only a few jurisdictions provide this service level, and El Dorado County did not provide this service level.

We applied the same methodology used in our solid waste rate and service level comparisons in Section 3. Based on the twelve jurisdiction means, for each of the six service levels, we calculated various statistics, such as the mean of all jurisdictions surveyed, median of

**Figure 4-2**  
**Historical Diversion Rates for Twelve Comparative Jurisdictions and El Dorado County**  
**(2000 to 2006)**  
**Solid Waste Rate and Service Study**  
**El Dorado County**

jurisdiction means, minimum and maximum of jurisdiction means, as well as mean without the highest and lowest rates, which eliminates those outliers that might drive the overall mean. Comparative jurisdiction mean residential solid waste collection rates, per customer, per month, were as follows:

- 1, 32-gallon can: \$19.24
- 1, 32-gallon cart: \$20.45
- 2, 32-gallon cans: \$23.82
- 1, 64-gallon cart: \$29.27
- 3, 32-gallon cans: \$29.87
- 1, 96-gallon cart: \$36.78.

Comparative jurisdiction mean residential solid waste collection rates, without the highest and lowest rates, per customer, per month, were as follows:

- 1, 32-gallon can: \$19.23
- 1, 32-gallon cart: \$20.57
- 2, 32-gallon cans: \$23.18
- 1, 64-gallon cart: \$29.20
- 3, 32-gallon cans: \$27.04
- 1, 96-gallon cart: \$36.34.

These two sets of mean residential rates were almost identical to each other for each service level. Therefore the highest and lowest rates should not be concerns for our analyses. Comparisons based on these two sets of means would produce similar results.

**Table 4-3**  
**Residential Solid Waste Collection Rates for Comparative Jurisdictions**

	Mean without Highest and Lowest Rates	\$19.23	\$20.57	\$23.18	\$29.20	\$27.04	\$36.34	
	Number of Rates	5	6	4	8	3	9	
	Mean of Unincorporated El Dorado County Franchise Area	\$16.08	–	\$23.07	\$26.26	–	\$26.81	53 <sup>b</sup>

<sup>a</sup> This mean is calculated based on the jurisdictions listed in this table, excluding the four counties of Monterey, Sutter, Yuba, and Sonoma.

<sup>b</sup> The County has an additional five (5) percent biomass diversion credit for unincorporated El Dorado County.

Comparative jurisdiction median residential solid waste collection rates, per customer, per month, were as follows:

- 1, 32-gallon can: \$18.53
- 1, 32-gallon cart: \$21.33
- 2, 32-gallon cans: \$25.08
- 1, 64-gallon cart: \$28.74
- 3, 32-gallon cans: \$31.15
- 1, 96-gallon cart: \$31.38.

---

Our data show that the median residential rates were very close to the mean residential rates, which implies our survey data have a normal distribution.

Jurisdictions employ different rate setting methodologies, and have different rate structures. Some counties have more linear rate structures, in which rates vary relatively widely. For example, in our residential rate survey, Monterey County, Sutter County, Yuba County, and Sonoma County have such rate structures, with large incremental differences between service levels.

Some counties have more tightly grouped rate structures, in which rates vary relatively little. For example, in our residential rate survey, Amador County has such a rate structure, with tightly grouped residential rates, such as \$19.08 for 1, 32-gallon cart; \$24.08 for 1, 64-gallon cart; and \$26.88 for 1, 96-gallon cart. El Dorado County also is a county with relatively tightly grouped rates.

Comparisons made among similar rate structure jurisdictions might produce more meaningful findings. Therefore, we excluded four (4) counties with linear rate structures, including Monterey County, Sutter County, Yuba County, and Sonoma County, from the twelve comparative jurisdictions, and developed another set of comparative jurisdictions mean residential solid waste collection rates of eight (8) jurisdictions, with similar rate structure to El Dorado County. Mean residential solid waste collection rates of eight jurisdictions with rate structure similar to El Dorado County, per customer, per month, were as follows:

- 1, 32-gallon can: \$16.39
- 1, 32-gallon cart: \$18.11
- 2, 32-gallon cans: \$20.79
- 1, 64-gallon cart: \$24.97
- 3, 32-gallon cans: \$24.25
- 1, 96-gallon cart: \$30.16.

## 2. Comparisons between County and Surveyed Jurisdictions

We compared residential solid waste collection rates between the County and the twelve comparative jurisdictions, for four (4) service levels, including:

- 1, 32-gallon can
- 2, 32-gallon cans
- 1, 64-gallon cart
- 1, 96-gallon cart.

We did not compare the County's 45-gallon can rates against the other jurisdictions, because there was not sufficient data available. For the subset comparisons, we compared County mean versus comparative jurisdiction means, and County mean versus comparative jurisdiction means without outliers, as shown in **Table 4-4** and **Table 4-5**, on the next page.

In Table 4-4, we compared the County mean with the comparative jurisdiction means, for each of the four service levels, for residential services. County residential average rates were below jurisdiction average rates for all four service levels, as follows:

- For the 1, 32-gallon can service level, the County average rate was substantially below the average of comparative jurisdiction rates, by 16.42 percent, or \$3.16
- For the 2, 32-gallon cans service level, the County average rate was slightly below the average of comparative jurisdiction rates, by 3.15 percent, or \$0.75
- For the 1, 64-gallon cart service level, the County average rate was substantially below the average of comparative jurisdiction rates, by 10.28 percent, or \$3.01
- For the 1, 96-gallon cart service level, the County average rate was dramatically below the average of other comparative jurisdiction rates, by 27.11 percent, or \$9.97.

	1, 32-Gallon Can		2, 32-Gallon Cans		1, 64-Gallon Cart		1, 96-Gallon Cart	
	County	Jurisdictions	County	Jurisdictions	County	Jurisdictions	County	Jurisdictions
Mean	\$16.08	\$16.39	\$23.07	\$20.79	\$26.26	\$24.97	\$26.81	\$30.16
Absolute Difference	-\$0.31		\$2.28		\$1.29		-\$3.35	
Percent Difference	-1.89%		10.97%		5.17%		-11.11%	
Number of Rates	5	5	6	5	1	6	2	7

Outliers, such as the highest and lowest rates, might drive results different. Therefore, we excluded the highest and lowest comparative jurisdiction rates, and compared the County mean against mean of the rest of the comparative jurisdictions, for each of the four service levels, for residential services, in Table 4-5, above. Except for the 2, 32-gallon cans service level, results were similar to those in Table 4-4, which further confirmed our previous comparisons. County residential average rates were still below jurisdiction average rates for all four service levels.

Generally, County residential rates were below average compared to comparative jurisdictions that have met the 50 percent AB 939 diversion requirement, particularly for higher service level, such as 96-gallon cart. This is likely because many of these jurisdictions have significantly higher rates, especially for the larger cart sizes, to discourage customers from using these service levels. These jurisdictions are the examples using rate structure pricing incentives for customers to reduce refuse generation.

### **3. Similar Rate Structure Jurisdiction Comparisons**

Perhaps a better rate comparison is provided in **Table 4-6**, above, where we compared County residential rates with the eight jurisdictions that have more tightly grouped rate structures, more like the rate structure the County has.

For this subset comparison, we compared the County mean with the similar rate structure jurisdiction means, for each of the four service levels. We found County residential average rates were above comparative jurisdiction average rates for the two service levels, and below jurisdiction average rates for the other two service levels, as follows:

- For the 1, 32-gallon can service level, the County average rate was slightly below the average of similar rate structure comparative jurisdiction rates, by 1.89 percent, or \$0.31
- For the 2, 32-gallon cans service level, the County average rate was above the average of similar rate structure comparative jurisdiction rates, by 10.97 percent, or \$2.28

- For the 1, 64-gallon cart service level, the County average rate was above the average of similar rate structure comparative jurisdiction rates, by 5.17 percent, or \$1.29
- For the 1, 96-gallon cart service level, the County average rate was well below the average of similar rate structure comparative jurisdiction rates, by 11.11 percent, or \$3.35.

Even after we compared rate differences between the County and the comparative jurisdictions with more similar, tightly grouped rate structures, we still found County residential rates, for the 1, 32-gallon can, and 1, 96-gallon cart service level, were below average of comparative jurisdictions.

#### 4. Comparisons between Each County Area and Surveyed Jurisdictions

In addition to our El Dorado County versus comparative jurisdiction level comparisons, we compared each County area residential solid waste collection rates with the comparative jurisdiction rates. In **Table 4-7**, on the next page, we compared County residential rates with the comparative jurisdiction means, for each County area. Among the nine areas, there were five areas with residential rates below the comparative jurisdiction average rates, across the offered can and cart service levels, including:

- Amador Disposal Service
- El Dorado Disposal Services, Cameron Park
- American River Disposal Service
- South Tahoe Refuse Company
- Tahoe-Truckee Sierra Disposal.

For the collection areas served by El Dorado Disposal Services, the residential rates were below the comparative jurisdiction average rates for the cart service levels. For the can service levels, the results were mixed.

One consistency should be mentioned is that, for both 64- and 96-gallon cart service levels, all County company/area residential rates were well below the comparative jurisdiction average rates, ranging from 10 percent to 38 percent, which corresponds to what we found in the previous county level comparisons that the County average 64- and 96-gallon cart residential rates were substantially below the comparative jurisdiction rates.

### C. Summary of Residential Rate and Service Level Comparisons

Generally, compared to the jurisdictions meeting the 50 percent AB 939 diversion requirement, County overall residential rates are below the comparative jurisdiction average rates. Even compared to the similar rate structure jurisdictions meeting the 50 percent AB 939 diversion requirement, overall County residential rates are still below the average rates for the 1, 32-gallon can, and 1, 96-gallon cart service levels.

More specifically, County residential rates are well below the comparative jurisdiction average rate, for both can and cart service levels, in most of County areas, served by five franchise companies, including follows:

- Amador Disposal Service
- El Dorado Disposal Services, Cameron Park
- American River Disposal Service
- South Tahoe Refuse Company
- Tahoe-Truckee Disposal.

In the four collection areas served by El Dorado Disposal Services, residential rates are below the comparative jurisdiction average rates for the two cart service levels.

	Comparative Jurisdiction Mean	\$19.24	\$23.82	\$29.27	\$36.78

The County basically has a more tightly grouped rate structure, with relatively little price incentives built in the rate structures. Especially for cart service levels offered in the El Dorado Disposal Services service areas, rates do not increase linearly as service levels increase, so customers may select an inappropriate cart size for their refuse generation level.

In the area served by South Tahoe Refuse Company, for residential solid waste service, there is a fixed, flat rate structure (\$23.79 for unlimited residential can service). This “all-you-care-to-dispose” service doesn’t provide a price incentive to reduce waste generation levels. In 2006, the City of South Lake Tahoe’s diversion level was 42, or 8 percent below the AB 939 minimum diversion requirement. The historical diversion levels of the City of South Lake Tahoe were also consistently low compared to the other areas in the County, and only exceeded the 50 percent AB 939 goal in 2004.

Solid waste disposal involves environmental costs associated with siting and operation of landfills. Recycling is one means of reducing these environmental costs. To encourage reducing refuse generation and increase recycling, and thus reduce materials deposited at landfills, shifting from fixed, or more tightly grouped prices to more linear, unit/volume-based prices for residential solid waste collection services, is one way to help increase diversion levels. Also it is important to consider a range of solid waste management options in addition to price incentives.

Employing some linear, systematic pricing rate structures, when coupled with other solid waste management tools, such as aggressive recycling programs, can help increase diversion levels. Some price incentive rate structures could be implemented in conjunction with new recycling programs (e.g., a cart-based curbside recycling system), waste reduction education campaigns, composting programs, and other diversion strategies to help divert waste from the disposal stream.

**Section 5**  
**Solid Waste Franchise Fees**  
**and Comparisons**

## 5. Solid Waste Franchise Fees and Comparisons

This section describes County solid waste collection franchise fees, as identified in the County solid waste services franchise agreements. We obtained, from the County, these solid waste services franchise agreements, for each of the six franchise companies.

We surveyed franchise fees paid by comparative jurisdictions in California, as requested by County staff. We provided franchise fee information for two sets of comparative jurisdictions, including a set of fourteen (14) comparative jurisdictions, which were the same as those used in our solid waste rate and service level surveys; and a set of fifty (50) comparative jurisdictions, which were in our own database of franchise fees for California jurisdictions.

Based on our comparative franchise fee survey results, included in **Exhibit 5-1** and **Exhibit 5-2**, we developed summary statistics for the surveyed comparative jurisdictions. We also provided franchise fee comparisons between the County and the comparative jurisdictions.

The remainder of this section is organized as follows:

- A. *El Dorado County Current Franchise Fees*
- B. *Comparative Jurisdiction Franchise Fees*
- C. *Franchise Fee Comparisons.*

### A. El Dorado County Franchise Fees

Franchise fees are paid by solid waste franchise companies to the county or city governing the areas they serve. The franchise fee requirement is typically identified in a franchise agreement that a jurisdiction entered into with its solid waste collection company.

Franchise fees are usually expressed as a percentage of the gross revenues earned by the hauling company providing solid waste services, including collecting, transporting, handling, and disposing of solid waste generated in the franchise area, though franchise fees also may be a fixed dollar amount in some cases. A few jurisdictions assess a franchise fee tied to the diversion levels of its haulers, in order to encourage franchise holders to increase their diversion levels.

The County has awarded exclusive franchise agreements to six (6) franchise companies, which are assigned specific geographic territories within the County. The County franchise agreements, with its six franchise companies, specify that the County can establish an amount equal to “a percentage of the gross revenues derived by Grantee from operations pursuant to this Franchise Agreement.”<sup>1</sup> The County currently requires

its franchise companies to remit franchise fees for five (5) percent of gross revenues (same for all six franchisees), as identified in the County solid waste services franchise agreements – “The Franchise Fee is initially set at five percent (5%) of Contractor’s Gross Revenues, and from time to time may be adjusted by Resolution of the Board of Supervisors.”<sup>1</sup>

County franchise fee requirements are summarized in **Table 5-1**, above. These franchise fees are paid quarterly to the County within forty-five (45) days following the end of each quarter. The County uses these funds to help develop solid waste management programs and comply with State waste reduction requirements.

The County mean franchise fee is five (5) percent of its franchisees’ gross revenues. The County median franchise fee is also five (5) percent of its franchisees’ gross revenues. Since franchise fees are exactly the same for all County’s franchisees, County minimum and maximum franchise fees are both five (5) percent, with no difference between them.

## **B. Comparative Jurisdiction Franchise Fees**

We surveyed a set of fourteen (14) comparative jurisdictions for their solid waste collection franchise fee levels, between December 2007 and January

---

2008. These fourteen jurisdictions are the same ones we surveyed for our comparable rates and service levels in Section 3. We also provided franchise fee information for an additional set of fifty (50) comparative jurisdictions. Most of the 50 jurisdictions are cities or towns, and a few are counties. The 50 jurisdiction information was contained in our own database of franchise fee information for California jurisdictions. **Exhibit 5-1** and **Exhibit 5-2**, starting on the next page, provide our comparative jurisdiction franchise fee survey results.

In some comparative counties, there are more than one solid waste franchise agreement with different franchise fee requirements. For example, in Nevada County, the franchise fee for Waste Management is five (5) percent, and the franchise fee for other haulers is four (4) percent. In Placer County, the franchise fee for Tahoe Truckee is eight (8) percent, and the franchise fee in the Western area is five (5) percent. Monterey County also has two franchise agreements for the County's unincorporated areas, both requiring ten (10) percent.

In our comparative jurisdiction franchise fee surveys, most of the comparative jurisdictions have a franchise fee based on a certain percentage of hauler's gross revenues. However, Calaveras County has a \$200.00 per vehicle permit fee, and a \$50.00 per backup vehicle permit fee.

In some jurisdictions, franchise fees are only applied to specific services. For example, the City of Elk Grove requires a floating franchise fee (8 percent to 35 percent), based on haulers' diversion levels, for commercial services. The City of Folsom requires an eight (8) percent franchise fee for construction and demolition waste services.

For the fourteen comparative jurisdictions, comparative jurisdiction franchise fees ranged from 1.50 percent to 23.00 percent. The comparative (14) jurisdiction mean franchise fee was 6.94 percent, and the comparative (14) jurisdiction median franchise fee was 5.00 percent.

Among the surveyed comparative jurisdictions, Tuolumne County had the lowest franchise fee of 1.50 percent, and Shasta County had the highest franchise fee of 23.00 percent. After eliminating the lowest and highest franchise fees, the comparative (14) jurisdiction mean franchise fee was 6.18 percent.

For the fifty comparative jurisdictions, comparative jurisdiction franchise fees ranged from 4.00 percent to 16.00 percent. The comparative (50) jurisdiction mean franchise fee was 9.61 percent, and the comparative (50) jurisdiction median franchise fee was 10.00 percent.

Among the surveyed comparative jurisdictions, the City of San Mateo had the lowest franchise fee of 4.00 percent, and both the City of Pasadena and the City of Pleasant Hill had the highest franchise fee of 16.00 percent. After eliminating the lowest and highest franchise fees, the comparative (50) jurisdiction mean franchise fee was 9.45 percent.

Summary statistics, for El Dorado County, the fourteen comparative jurisdictions, and the fifty comparative jurisdictions, are summarized in **Table 5-2**, on page 5-7. Generally, El Dorado County assessed lower franchise fees than the other comparative jurisdictions. The El Dorado County median franchise fee is the same as the fourteen comparative jurisdiction median, but it is only one-half of the fifty comparative jurisdiction median.

Number of Rates	8	14	47

### C. Franchise Fee Comparisons

Most jurisdictions in California assess franchise fees, which are generally defined as a certain percentage of franchised hauler's gross revenues. According to our franchise fee surveys, average franchise fees ranged from 6.94 percent to 9.61 percent, and median franchise fees ranged from 5.00 percent to 10.00 percent. Provided in the County solid waste services franchise agreements, the County currently assesses a five (5) percent of contractor's gross revenues derived by the contractor from its solid waste service operations, including collecting, transporting, handling, and disposing of solid waste generated in the County franchise area.

Among the fourteen comparative jurisdictions, there were four (4) jurisdictions with a franchise fee lower than El Dorado County, as follows:

- Amador County – 2.00%
- Butte County – 2.00%
- Nevada County (other haulers) – 4.00%
- Tuolumne County – 1.5%.

There were five (5) jurisdictions with the same five (5) percent franchise fee as El Dorado County, including Nevada County (Waste Management), Placer County (Western Area), Sutter County, Yuba County, and Town of Truckee. The rest of the fourteen comparative jurisdictions assessed a higher franchise fee than El Dorado County, ranging from 7.50 percent to 10.00 percent. In addition, Calaveras County required a fixed dollar franchise fee/permit fee assessed per vehicle.

Among the fifty comparative jurisdictions, there were only two (2) jurisdictions with a franchise fee lower than El Dorado County, including the City of San Mateo (4.00 percent), and the City of Lodi (4.80 percent). There were four (4) jurisdictions having the same five (5) percent franchise fee as El Dorado County, including Unincorporated Contra Costa County (Allied, RSS), the unincorporated areas served by CCCSWA (Allied), the City of Clayton, and the City of Pittsburg. The rest of the fifty comparative jurisdictions assessed a higher franchise fee than El Dorado County, ranging from 5.30 percent to 16.0 percent.

## 5. Solid Waste Franchise Fees and Comparisons

Number of Rates	8	16	8	50

**Table 5-4**

Comparison between County and Surveyed Jurisdictions, for County Mean versus Comparative Jurisdiction Means, (Without Highest and Lowest Rates) for Franchise Fees

(As of January 2008)

Solid Waste Rate and Service Study  
El Dorado County

Description	Comparison 1		Comparison 2	
	County	Fourteen (14) Jurisdictions	County	Fifty (50) Jurisdictions
Mean	5.00%	6.18%	5.00%	9.45%
Absolute Difference	-1.18%		-4.45%	
Percent Difference	<b>-19.09%</b>		<b>-47.09%</b>	
Number of Rates	8	14	8	47

In **Table 5-3** and **Table 5-4**, above, we compare franchise fees between the County and the comparative jurisdictions, for County mean versus comparative jurisdiction means. Each comparison included two sub-comparisons: one was the comparison between the County and the fourteen comparative jurisdictions, which were used in our solid waste rate and service level comparisons; the other who the comparison between the County and the fifty comparative jurisdictions.

In Table 5-3, we compared the County mean with the comparative jurisdiction means, for franchise fees. County franchise fees were well

below comparative jurisdiction average fees for both sub-comparisons, as follows:

- In comparison to the fourteen comparative jurisdictions, the County average franchise fee was substantially below the average of comparative jurisdiction fees, by 27.95 percent, or by 1.94 percentage points
- In comparison to the fifty comparative jurisdictions, the County average franchise fee was dramatically below the average of comparative jurisdiction fees, by 47.97 percent (nearly only half of the comparative jurisdiction average), or by 4.61 percentage points.

---

In Table 5-4, we compared the County mean with the comparative jurisdiction means, without the highest and lowest franchise fees. County franchise fees were still well below comparative jurisdiction average fees for both sub-comparisons. Compared to the comparative jurisdictions, the County average franchise fee was substantially below the average of comparative jurisdiction fees, by 19.09 percent, and 47.09 percent, respectively, for the fourteen comparative jurisdictions, and the fifty comparative jurisdictions. After eliminating these low and high fees, which might drive different results, the County average franchise fee was still well below comparative jurisdiction averages, which further confirmed our previous findings.

The County assesses a five (5) percent franchise fee on its franchisees' solid waste operations pursuant the County solid waste services franchise agreements, and it is the same for each of the six franchise companies. In comparison to the comparative jurisdictions we surveyed, the County requires its franchise companies to remit a lower than average franchise fee at five percent of gross revenues.

The County's relatively low franchise fees help keep their residential refuse rates comparable. On the other hand, the County has latitude to raise their franchise fees in the future to help fund County solid waste improvements.

**Section 6**  
**Solid Waste Services Profitability Level  
and Waste Management Industry  
Standard Comparisons Between the  
County and Selected Jurisdictions**

## 6. Solid Waste Services Profitability Level and Waste Management Industry Standard Comparisons Between the County and Selected Jurisdictions

This section details our analyses for both regional (Northern California) solid waste services profitability levels and waste management industry standards (Nation-wide). For regional solid waste services profitability level analyses, we described both County profitability levels for the companies serving County areas, and the comparative jurisdiction profitability levels. We surveyed a total of twenty-two (22) comparative jurisdictions. Fourteen of these twenty-two jurisdictions are the same as those used in our solid waste rate and service level comparisons in Section 3. We also provide profitability levels for some additional jurisdictions.

For waste management industry standards, we collected waste management company profitability data. We provide both publicly held waste management company and privately held waste management company return data.

The County has changed its rate setting methods over time such that for some areas it does not specifically provide an operating ratio (OR) to its franchised hauler. Therefore, we present profitability data in this chapter for information purposes only and without comparing these data to returns for County franchised haulers.

The remainder of this section is organized as follows:

- A. Regional Solid Waste Services Profitability Levels*
- B. Waste Management Industry Profitability Standards*
- C. Overview of Industry Productivity and Efficiency Standards*
- D. Discussion of El Dorado County Collection Company Operating Efficiencies.*

### A. Regional Solid Waste Services Profitability Levels

The most common method that California jurisdictions use to determine franchise waste management company profitability is the operating ratio method. A jurisdiction typically provides its solid waste franchised hauler with an operating ratio return on allowable operating costs. This operating ratio method is most commonly used for the waste management industry, which requires a large percentage of revenues to maintain collection, recycling, and disposal operations. The operating ratio is defined as:

Operating ratio (OR) = Allowable costs /  
(Allowable costs + Allowable profits).

This ratio shows the efficiency of a company's management by comparing operating expenses to net sales. A smaller operating ratio represents a higher profitability level allowed for a company. An OR of 90 percent equals a profit of eleven (11) percent on allowable costs. An OR less than 90 percent equals a profit rate of more than eleven percent. Conversely, an OR more than 90 percent equals a profit rate of less than eleven percent.

Though rare, some jurisdictions also use other return methods, such as return on equity, return on assets, or weighted-average cost of capital. In addition, some jurisdictions don't specifically regulate the profitability levels of their franchised haulers.

These different return methods present different indicators of profitability for a company, and use industry norms and key business ratios. The operating ratio return on allowable operating costs measures a company's efficiency of operation. It reveals the operating cost spent per dollar of sales. Return on equity measures a company's efficiency at generating profits from the capital invested by the shareholders. Return on assets measures a company's efficiency at generating profits from its total assets. Weighted average cost of capital presents the minimum return that a company must earn using existing assets.

## 1. Historical El Dorado County Operating Ratios

The County has historically employed an operating ratio return on allowable operating costs method, which allows a regulated profit margin on solid waste collection, recycling, and transfer station operations for its franchise companies. The former *County Solid Waste Rate Setting Policies and Procedures Manual* for West

Slope Areas specified that "for collection operations, the initial target OR was set at 90 percent," and "for the transfer station/MRF operations they were established as a sliding – scale regulated margin (percentage of operating costs), ranging from 0 percent to 20 percent (equal to an OR range of 100 percent to 80 percent, respectively), depending upon recycling recovery results."

The *County Solid Waste Rate Setting Policies and Procedures Manual* for East Slope Areas specifies "a sliding-scale Operating Ratio (OR) of 87 percent to 94.3 percent depending upon recycling recovery results" for collection and recycling, transfer station operations.

In **Table 6-1**, on the next page, we provide historical El Dorado County operating ratios for El Dorado Disposal Services, Western El Dorado Recovery Systems, and South Tahoe Refuse Company. We do not know the operating ratios for the rest of the companies.

El Dorado Disposal Services had a 90 percent allowable operating ratio, while South Tahoe Refuse Company has an incentive-based, sliding-scale allowable operating ratio, which ties the profitability levels to the diversion outcomes. In addition, the allowable operating ratio for Western El Dorado Recovery Systems MRF was also an incentive-based, sliding-scale ratio depending on the Company's recycling recovery results.

## 2. Comparative Jurisdiction Operating Ratios

We surveyed a total of twenty-two (22) comparative jurisdictions for their profitability levels, between December 2007, and January 2008. Fourteen (14) of the jurisdictions are the same as those used in our comparative jurisdiction rate and service level surveys in Section 3. We also provide profitability levels for some additional northern California cities, such as the City of Vallejo, the

**Table 6-1**  
**Historical El Dorado County Operating Ratios**  
**Solid Waste Rate and Service Study**  
**El Dorado County**

Company	Franchised Area	Operating Ratio
<i>Waste Connections of California</i>		
Amador Disposal Service	West Slope	N/A <sup>a</sup>
El Dorado Disposal Services	West Slope	90.00% <sup>1</sup>
Western El Dorado Recovery Systems	West Slope	80.00% to 100.00% <sup>b,1</sup>
<i>South Tahoe Refuse Company</i>		
American River Disposal Service	East Slope	N/A <sup>a</sup>
Sierra Disposal Service	West Slope	N/A <sup>a</sup>
South Tahoe Refuse Company	East Slope	87.00% to 94.30% <sup>c,2</sup>
<i>Tahoe-Truckee Sierra Disposal Company</i>		
Tahoe-Truckee Sierra Disposal	East Slope	N/A <sup>d</sup>

<sup>a</sup> The franchise agreement specifies that the County provide ADS with a reasonable financial return.

<sup>b</sup> The Operating Ratio depends on the diversion levels of the Company, and ranges from 80 to 100 percent.

<sup>c</sup> The Operating Ratio depends on the diversion levels of the Company, and ranges from 87.00 to 94.30 percent.

<sup>d</sup> The franchise agreement specifies that a profit is allowed determined by the OR method, and the exact OR is determined by the Board.

N/A: not available.

Source:

<sup>1</sup> Former El Dorado County *Solid Waste Rate Setting Policies and Procedures Manual* for West Slope Areas.

<sup>2</sup> El Dorado County *Solid Waste Rate Setting Policies and Procedures Manual* for East Slope Areas.

City of Concord, the City of Martinez, the City of Vacaville, etc. Profitability levels of these neighboring comparative jurisdictions outside the County provide our regional profitability levels for solid waste franchise companies.

**Table 6-2**, on the next page, shows our comparative jurisdiction profitability level survey results. Of the total twenty-two surveyed jurisdictions, there were twelve (12) jurisdictions using an operating ratio; and there were seven (7) jurisdictions not specifically regulating profitability levels. Profitability information was not available for the rest of the three (3) jurisdictions.

All operating ratios are provided on an earnings before interest and tax (EBIT) basis, except for Amador County (on an earnings before tax (EBT) basis). Most comparative jurisdictions allow profits

on interest. In contrast, interest expenses are not allowed for profit considerations in the County, for both West Slope Areas and East Slope Areas. We find that interest is an important allowable cost consideration because interest is large for heavily leveraged companies or those that have financed recent capital investments with debt.

Some of the operating ratios represent the midpoint of a targeted OR range. For example, for Amador County, the OR represents the midpoint of a targeted OR range of 85 to 90 percent. For Contra Costa County, the OR represents the midpoint of a targeted OR range of 88 to 92 percent. For the City of Concord, the OR represents the midpoint of a targeted OR range of 88 to 92 percent. These jurisdictions allow their franchise companies a range of profitability to encourage operating efficiencies.

	Minimum	87.50%
	Maximum	91.00%
	Difference Between Minimum and Maximum	3.50%

## Notes:

\* All ORs are provided on an earnings before interest and tax (EBIT) basis, except for Amador County.

<sup>a</sup> The OR represents the midpoint of a targeted OR range of 85 to 90 percent.

<sup>b</sup> Data as of 2006.

<sup>c</sup> The OR represents the midpoint of a targeted OR range of 88 to 92 percent.

<sup>d</sup> There are multiple franchise agreements. The OR depends on the franchise agreement term, the longer the term, the higher the OR, and the shorter the term, the lower the OR. The OR represents the midpoint of a targeted OR range of 90 to 92 percent.

N/A: not available.

In addition, San Luis Obispo County has multiple franchise agreements. The OR depends on the franchise agreement term. The longer the term, the higher the operating ratio; and the shorter the term, the lower the operating ratio. These operating ratios range from 90 percent to 92 percent.

For the surveyed comparative jurisdictions, operating ratios ranged from 87.50 percent to 91.00 percent. Comparative jurisdiction mean operating ratio was 89.79 percent, and comparative jurisdiction median operating ratio was 90.00 percent. Among the surveyed jurisdictions, Amador County allows the lowest operating ratio at 87.50 percent; and San Luis Obispo County allows the highest operating ratio at 91.00 percent.

## B. Waste Management Industry Profitability Standards

For waste management industry profitability standards, we drew on our database of returns for publicly held and privately held companies. Sources for this database include company 10-k reports, data from companies that assemble and consolidate private company tax return results, and information from our work for other jurisdictions. We have compiled over ten years of this historical benchmarking data. The historical industry standard operating ratio return is 90 percent.

We compared recent OR data available for publicly and privately held waste management companies. Because available financial data are for combined collection, transportation, and disposal operations, the corresponding operating ratios are lower than businesses providing exclusively waste collection services (i.e., without disposal). Operating ratios for collection operations alone are generally higher than for disposal operations alone because disposal companies require greater profitability returns due to the significant environmental and regulatory risks of operating landfills.

**Table 6-3**

<sup>a</sup> On an earnings before interest and tax (EBIT) basis.  
Source: Published company 10-k reports.

## 1. Publicly Held Waste Management Company Operating Ratios

We reviewed financial information for nine (9) large publicly held waste management companies between 1997 and 2007. The nine companies included:

1. Allied Waste Industries
2. Browning Ferris Industries
3. Casella Waste Systems
4. Republic Services
5. Superior
6. Waste Connections
7. Waste Management
8. Waste Industries
9. WCA Waste Corp.

These panel data are from published company 10-k reports. The data set contains financial information on the nine companies observed over a eleven year period.

There were actually eighteen (18) publicly held waste management companies between 1993 and 2000. There has been significant recent acquisition and merger activity in the waste management industry, so some of these companies are now part of other companies. As an example, Waste Management acquired USA Waste, Philip, and Sanifill. Likewise, Allied Waste Industries acquired Laidlaw, and Browning Ferris Industries. We believe however that using historic data for all of these companies represents the best available information for publicly held companies for the period of 1997 to 2007.

**Table 6-3**, left, summarizes weighted average operating ratios and average operating ratios, both on an earnings before interest and tax (EBIT) basis, for publicly held waste management companies, from 1997 to 2007. The mean weighted average operating ratio, between 1997 and 2007, was 87.41 percent, while the mean average operating ratio during the same period was 86.11 percent. The median weighted average operating ratio, between 1997 and 2007, was 85.83 percent, and the median average operating ratio during the same period was 85.84 percent.

Similarly, **Figure 6-1** and **Figure 6-2**, on the next page, graphically show historic eleven-year operating ratio trends for publicly held waste management companies. During this eleven-year period, there was a downward trend for the weighted-average operating ratio, while the trend for the average operating ratio was inconsistent. However the overall trend of the operating ratio for publicly held companies was below the targeted 90 percent OR.

<sup>a</sup> For SIC Code 4953, Refuse Systems, on an earnings before interest and tax (EBIT) basis.

Source: Robert Morris & Associates Annual Statement Studies.

## 2. Privately Held Waste Management Company Operating Ratios

We reviewed industry data published by Robert Morris & Associates (RMA). RMA publishes its “Annual Statement Studies” for an array of industries, including privately held waste management companies. RMA data are for companies doing business as refuse systems (SIC Code 4953). These are systems “primarily engaged in the collection and disposal of refuse by processing or destruction or in the operation of incinerators, waste treatment plants, landfills, or other sites for disposal of such materials.” These data “do not include companies primarily engaged in collecting and transporting refuse without disposal.”

As shown in **Table 6-4**, on page 6-8, the weighted-average operating ratios, on an EBIT basis, of over 66 companies surveyed in each of the six years from 2001 to 2007, ranged from 88.80 to 97.70 percent. The data were sorted by company sales, as follows:

- \$1 million to \$3 million
- \$3 million to \$5 million
- \$5 million to \$10 million
- \$10 million to \$25 million.

The mean operating ratio, between 2001 and 2007, was 94.65 percent, and the median operating ratio during the same period was 94.95 percent.

**Figure 6-3**, on the next page, graphically illustrates historic six-year period operating ratios for privately held waste management companies. The operating ratios varied by company size, and also varied by year. The historic operating ratio trend was not obvious. However the overall operating ratio for privately held companies was above the targeted 90 percent. Combined with publicly held waste management company operating ratio, the industry operating ratio return is approximately 90 percent.

## C. Overview of Industry Productivity and Efficiency Standards

Productivity and efficiency data for the waste management industry is highly varied and depends on the characteristics of each waste management system. In this section we discuss industry norms for various productivity and efficiency measures. Based on our site visits, interviews of company management, and assessment of data provided by the six (6) companies, we also provide a general assessment of the relative productivity and efficiencies of each company. The remainder of this section is organized as follows:

1. *Collection Measures*
2. *Customer Service Measures*
3. *Direct Labor Measures*
4. *Vehicle Measures*
5. *Cost Measures*
6. *Other Measures.*

### 1. Collection Measures

Collection productivity is often measured based on the number of households picked up per day. For a typical “automated” route, the number of households picked up, per day, ranges from 700 up to as much as 1,500. Automated routes generally require a one-person crew. Automated trucks include an articulated arm that the driver uses to pick up the cart.

Automated routes have application in more urban areas with wide two-way streets, and limited overhanging trees. Automated routes are most often used in conjunction with a cart-based system.

For a “manual” route, the number of households picked up per day is significantly less than for an automated route, or between 200 and 450 per day. Typically, two, and sometimes three driver/helpers service a manual route.

In many cases, a company will install a tipper on the truck to minimize manual lifting of containers

(called semi-automated service). This improves collection efficiencies and minimizes worker injuries.

## 2. Customer Service Measures

**Table 6-5**, right, summarizes how refuse collection services were rated by fourteen jurisdictions. Many jurisdictions rate refuse collection surveys highly. On average, 90 percent of residents surveyed rated refuse collection services as satisfactory, or better.

By franchise agreement, the County can require that its haulers conduct a customer satisfaction survey. The County has not recently conducted a customer satisfaction survey for refuse collection services.

Typical complaint levels are measured by the number of complaints per customer, per year (either 100, 1,000, or 10,000 customer). These complaint levels average between 2 and 10 percent of the total number of customers, per year. Rather than specific count of complaints, what may be a more important measure is the time required to resolve a complaint.

## 3. Direct Labor Measures

Waste management industry wage rates are generally as follows:

- Driver - \$15 to \$27 per hour
- Helper - \$12 to \$15 per hour
- Sorter - \$8 to \$14 per hour.

Wages are usually higher for union workers than for non-union workers. Employee overtime generally ranges between 5 and 10 percent of total wages.

## 4. Vehicle Measures

Collection trucks generally have between 20 and 40 cubic yards of capacity, and carry between 6 and 12 tons of compacted material. The total number of collection vehicles required for a

**Table 6-5**  
Recent Comparative Customer Satisfaction Survey Results For Selected California Jurisdictions

Jurisdiction	Rating of Refuse Collection Services
1. City of Berkeley	77 percent rated favorably
2. City of Burbank	In top two services rated
3. City of Carlsbad	89 percent rated as excellent or good
4. City of Claremont	92 percent satisfaction
5. City of Concord	2008: 87 percent satisfaction (highest rated City service)
6. City of Monterey	93 percent rated as average or better
7. City of Newport Beach	2008: 92 percent rated refuse collection very satisfied or satisfied
8. City of Palo Alto	2003: 94 percent rated as excellent or good
9. City of Sacramento	Among the top three highest rated services
10. City of San Diego	2002: 96 percent satisfaction rating for residential trash, 94 percent for curbside recycling
11. City of Santa Monica	78 percent rated as excellent or good
12. City of Sunnyvale	97 percent rated as average or better, 88 percent above average
13. City of San Jose	96 percent satisfaction level with garbage and recycling
14. City of Temecula	Among top three of ten services rated
Average of eleven (11) cities with numeric rating of satisfactory or better	90.0 <sup>1</sup>

jurisdiction generally are a function of the total number of customers, and the number of customers a truck can serve per day. New automated trucks cost up to \$275,000 per truck.

<sup>1</sup> Based on the most current data available for each City. As shown in Table 6-5, customer satisfaction ratings were not uniform. Some cities rate customer satisfaction using "average and above" data and others rate customer satisfaction using "good and above" data.

Vehicle fleet age varies depending on the company maintenance capabilities and practices. For collection truck fleets that are heavily used, a seven to ten-year replacement cycle is common, with frontloader and sideloader trucks replaced earlier than roll off trucks and rear loader trucks.

A company will generally carry at least ten (10) percent of its fleet as spares. The company uses spares when a truck breaks down in the field or is in the shop for maintenance.

## 5. Cost Measures

Total system costs per ton range anywhere from \$100 per ton, up to \$400 per ton, with many systems in the \$150 to \$250 per ton range. We provide the County with following percent of total cost averages for comparison purposes:

- Disposal costs – 25% to 35%
- Direct labor costs – 20% to 25%
- Operations and maintenance costs – 10% to 15%
- General and administrative costs – 10% to 15%, public company average 11%
- Management fees – 2 %.

## 6. Other Measures

Workers compensation can be assessed based on a company's experience mod, or mod rate. The mod rate is based on the company's prior accident and workers compensation claim history (i.e., the number and size of claims filed by injured workers). The average industry mod rate is equal to 100 percent. A good mod rate is below 100 percent. A lower mod rate reduces the worker's compensation premium that a company must pay.

## D. Discussion of El Dorado County Collection Company Operating Efficiencies

### 1. Amador Disposal Service (ADS)

ADS uses a combination of one (1) satellite truck (6 cubic yard load), six (6) rear loader trucks (25 cubic yard loads), and a roll off truck (on-call) to serve 8.5 routes.<sup>2</sup> The average fleet age is eleven (11) years.

ADS uses one (1) driver per truck. ADS drivers exit the truck and tip the containers or carts using a cart tipper. Drivers must exit the truck at every stop.

All routes within ADS service areas are considered rural or hard-to-serve rural. Service in these areas is non-mandatory. Due to the geographic range covered by its routes, ADS can only serve between 160 and 270 customers per route, per day. ADS routes are not well-suited for automated trucks, or cart-based service, which could increase efficiencies.

ADS employees are non-union. Average wage rates are well within the norms for the industry. ADS overtime rates currently are slightly above industry averages due to the need for ADS to extend the average time per route, for some routes, beyond an 8 hour day.

ADS provides customers with blue bags for recyclable collection. ADS collects blue bags within the refuse container. Blue bags are separated from the refuse stream at the Western Amador Recovery Facility (WARF), in Ione, California. The WARF forwards blue bags to the Smurfit-Stone facility in Sacramento, California for processing.

<sup>2</sup> Routes are serviced primarily on Monday (with some Tuesday routes). ADS shares labor/trucks with Waste Connections areas served in neighboring Amador and Calaveras counties, creating some economies of scale for the unincorporated County service area.

In ADS areas, there is a relatively limited amount of recyclable materials collected through the residential blue bag program (22 tons out of 2,579 tons collected, or less than one percent). Additionally, 37 tons of commercial recyclables and 25 tons of industrial materials are diverted. No yardwaste is collected curbside.

**Conclusion:** *ADS cannot materially increase its collection operating efficiencies given the constraints of its rural and hard-to-serve service areas.*

## 2. El Dorado Disposal Service (EDDS)

EDDS uses a combination of satellite trucks (for rural, hard-to-serve areas) and manual-automated trucks (for rural areas) to serve fourteen (14) residential, ten (10) commercial, and seven (7) roll-off routes. The average fleet age is three years for residential trucks, six years for commercial trucks, and seven years for roll-off trucks, so the trucks are relatively new. EDDS uses one (1) driver per truck.

In contrast to ADS-served areas, EDDS provides every other week recycling and yardwaste services. Where ADS-served areas require only one truck and one route because all materials are collected together (i.e., blue bag within the can), EDDS serviced areas require two trucks and two routes because refuse is collected on a separate route from the every other week yardwaste/curbside recyclable route.

All routes within EDDS service areas are considered either rural or hard-to-serve rural. Service in these areas is non-mandatory.

For its hard-to-serve areas, EDDS can only serve between 80 and 250 customers, per route, per day, for refuse (and fewer for the yardwaste/curbside recycling routes). EDDS uses the small two-ton satellite trucks for these hard-to-serve routes.

For rural routes (i.e., not necessarily hard-to-serve areas, such as Diamond Springs, Shingle Springs, and Rescue) the number of customers ranges from 625 to 735, per route, per day, for refuse collection (and fewer for yardwaste/curbside recycling routes).<sup>3</sup> For these rural routes, EDDS uses specially designed manual-automated trucks which allow the driver to either exit the truck and manually tip a container, or use an articulated arm to automatically pickup a cart.<sup>4</sup> This combination technology is necessary to efficiently serve routes with both container and cart options. For these rural areas, the numbers of customers served per route, per day, using this combination manual-automation collection method approaches the lower end of the industry range for automated collection.

EDDS collection efficiencies are constrained by several factors, including:

- A large number of roads/driveways not maintained by the County (which EDDS will not travel on due to the weight of its trucks)
- County limitations on “group” areas (where customers in an area all place their containers together)<sup>5</sup>
- A significant number of non-subscription customers, as the service is not mandatory.<sup>6</sup>

EDDS employees are non-union. Average wage rates are on within the norms for the industry. EDDS overtime rates currently are slightly above industry averages due to the need for EDDS to extend the average time per route, for some routes, beyond an 8 hour day.

<sup>3</sup> For more urban areas of the County with mandatory collection (El Dorado Hills), EDDS can serve up to 850 customers per route.

<sup>4</sup> The current fleet of manual-automated trucks cost approximately \$260,000 per truck.

<sup>5</sup> These areas are often a source of illegal dumping.

<sup>6</sup> The exact level of non-mandatory service is unknown in the County. EDDS indicated that the number of non-subscription customers is significant and could approach those recently measured by the City of Placerville (at approximately 40 percent).

EDDS provides customers with the choice of a company provided cart or company provided blue bags for recyclable collection. EDDS combines blue bags and source separated materials at the Western El Dorado Recovery Systems (WERS) MRF, in Diamond Springs, California. The WERS transfers this source-separated curbside recyclable material to the Pacific Rim facility in Benicia, California for processing.

In EDDS areas, there are a relatively significant quantity of recyclables and yardwaste materials collected through the source separated residential curbside recycling and yardwaste streams, and also from the refuse processed by the WERS dirty MRF (8,100 tons out of 16,260 tons collected, or about 50 percent). EDDS diversion efforts for the County waste stream are sufficient at this time.

**Conclusion:** *EDDS cannot materially increase its collection operating efficiencies in the hard-to-serve areas. EDDS has adapted by using manual-automated trucks to maximize efficiencies for collecting cans and carts in its rural service areas. EDDS has sufficiently met current AB 939 diversion goals for the unincorporated County areas.*

### 3. American River Disposal Service (ARDS)

ARDS serves a very small portion of unincorporated County. Areas served are mostly campgrounds and summer cabins. One large client is Sierra at Tahoe.

ARDS uses one (1) or two (2) routes to serve its residential and commercial customers. ARDS uses one person per truck. ARD has 1.2 FTE drivers (serviced by STR drivers). ARD uses fork trucks (6 cubic yard, 4 by 4 trucks). ARDS serves up to 79 customers per residential route, per day on manual routes.

ARDS efficiencies are affected by:

- Customers spread over a large service area (Wednesday only collection in the fall, winter, and spring; and Monday/Wednesday collection in the summer)
- Winter driving conditions with heavy snow over containers and icy, snow-covered roads
- Bear bins that increase time on routes
- Narrow, windy roads leading to campgrounds require trucks to drive very slowly and make access difficult
- ARDS hauls material to the STR transfer station/MRF, approximately 38 miles one way.

ARDS employees are non-union. Average wage rates are well within norms for the industry. ARDS employees receive little overtime.

**Conclusion:** *ARDS cannot materially increase its collection operating efficiencies given the constraints of its rural, seasonal, and hard-to-serve service areas.*

### 4. Sierra Disposal Service (SDS)

SDS serves unincorporated County residential routes with manual service. SDS uses eight (8) routes to serve its residential and commercial customers. SDS uses a combination of front loaders, rear loaders, and fork trucks (6 cubic yard, 4 by 4 trucks).

SDS serves up to 78 customers per route, per day, on its hard-to-serve routes. For the rural (not necessarily hard-to-serve) routes, SDS serves, on average, up to 600 customers per route, per day.

SDS employs 7 full-time drivers, a supervisor who drives to cover vacation days for other drivers, and two full-time “swampers” (manually pickup residential refuse cans). SDS uses one person per truck.

---

SDS adds a new truck whenever it can afford to, which has only been every six years. The average age of a truck in the SDS fleet is 12 years old. SDS efficiencies are affected by:

- Rural collection area with customers spread over a large area
- Large distances between customers with narrow roads and steep terrain
- One hour drive each way to the transfer station, approximately 40 miles.

SDS employees are non-union. Average wage rates are well within the norms for the industry. SDS employees receive little overtime.

**Conclusion:** *SDS cannot materially increase its collection operating efficiencies in its hard-to-serve service areas. With some degree of automation/cart-based service in the rural routes, SDS might be able to marginally increase its efficiencies.*

## 5. South Tahoe Refuse (STR)

STR serves unincorporated County residential routes with manual service. SDS uses portions of eleven of its (11) routes to serve its unincorporated County residential and commercial customers.<sup>7</sup> STR uses a combination of front loaders and fork trucks (6 cubic yard, 4 by 4 trucks).<sup>8</sup> STR serves, on average, between 500 and 600 customers per route, per day.

To serve all of its areas (of which unincorporated County is a small portion of), STR has 10 primary drivers, 6 part-time drivers who also "swamp" (manually dump residential garbage cans) and 9 full-time "swampers." STR uses two or three persons per truck.

---

<sup>7</sup> STR recently decreased the total number of required routes and associated trucks by one.

<sup>8</sup> Primarily during winter months, fork trucks are used by STR to collect materials at the curb. Fork trucks then empty material into front loaders which are traveling along the route.

STR adds a new truck every one to two years so that the entire fleet will not need to be replaced at one time; the average age of a truck in the STR fleet is seven years old. STR efficiencies are affected by:

- Seasonal, second homeowner, customer base
- Winter driving conditions with ice and snow on the roads
- Bear bins that increase time on routes
- Fluctuations in refuse tonnage (approximately doubles in the summer)
- Summer tourism traffic that increases collection times.

STR employees are non-union. Average wage rates are well within norms for the industry. STR employees receive little overtime.

To increase diversion levels, STR is starting construction on a Resource Recovery Facility that will allow it to start a residential green waste route and provide a dedicated facility to receive clean green waste loads from yard and tree service contractors.

**Conclusion:** *STR cannot materially increase its collection operating efficiencies given the range of conditions present in its service areas.*

## 6. Tahoe Truckee Disposal Service (TTDS)

TTDS serves El Dorado County areas with manual service. TTDS serves between approximately 175 and 300 households, per route, per day. TTDS uses a combination of specially fabricated one-ton, 4x4 pickup trucks and frontloaders. Pickup trucks are well-suited to serve areas with narrow streets, overhanging trees, single lane roads, and difficult winter conditions.

Laborers physically tip material into 6-cubic yard bins specially mounted to the pickup trucks. When full, TTDS transfers the material from the

pickup truck to a 40 cubic yard frontloader. The frontloader transports material to the Eastern Regional Transfer Station/Materials Recovery Facility (MRF), and makes no more than one trip, per route, per day.

The number of TTDS pickups per day also is limited by the fact that many customers have bear bins, specially designed locked metal boxes designed to restrict access by bears and other wild animals. Drivers must open and check each bear bin regardless of whether the customer has setout material.

We have the following findings related to TTDS efficiencies:

- TTDS's manual pickup truck/frontloader method is an efficient way to service the hard-to-serve El Dorado County areas. TTDS routes are not well-suited for automation, or cart-based service, but rather the combined pickup truck/frontloader service model
- TTDS truck maintenance and operations are efficient and cost-effective. Pickup trucks are relatively new, while frontloaders are, on average, more than ten (10) years old. The TTDS fleet is about 50 percent compliant with California Air Resources Board (CARB) air quality standards. TTDS has a truck maintenance management schedule

that has trucks come in for regular maintenance every 150 hours

- TTDS non-union labor rates are consistent with those in the industry. Drivers work a 40 hour week and do not use much overtime
- TTDS travel distances from remote areas of El Dorado County are up to 25 miles one way from their route to the Eastern Regional MRF
- To stabilize cash flow and keep customers from frequently starting and stopping their service (as service is not mandatory), TTDS uses a system of "can averaging." TTDS uses an on-truck computer system to record information such as whether the customer setout material, the number of containers setout, and whether a blue bag was used. TTDS uses a system of can credits (i.e., 13 credits per quarter). TTDS will carry a customer's can credits for up to six (6) months, allowing a customer to optimize its variable setout requirements over time. This can credit system works for the large number of second home owners who may not live in their homes throughout the year and may occupy their home only on weekends.

**Conclusion:** *TTDS cannot materially increase its collection operating efficiencies given the constraints of the rural and hard-to-serve service areas.*

**Section 7**  
**Franchise Agreement Valuations**  
**for County Solid Waste Services**

## 7. Franchise Agreement Valuations for County Solid Waste Services

We valued El Dorado County solid waste services franchise agreements and present our results in this section. Among the County solid waste services franchise agreements, for the upcoming expiration, one franchise expires in late 2009, some franchises expire in 2012, and other franchises expire in 2014.

Some County franchise companies have requested franchise agreement extensions. The County is undertaking this study in advance of these franchise expirations so that the County will have adequate information to plan future system alternatives. The County would like to understand the value of its franchises to the respective franchise solid waste collection companies.

We obtained, from the County, recent financial statements, rate review documents, and other revenue and cost information for each of the six franchise companies. In our valuations, we estimated the value of the franchise agreements over a maximum fifteen (15) year time horizon.

For each of the six franchise companies, we projected a stream of estimated profitability cash flows. We used discounted profitability cash flow analyses to estimate the net present value of the estimated cash flows for the current term, a five year franchise term, a ten year franchise term, and a fifteen year franchise term. We compared County franchises over the same discounting time periods in order to have consistent franchise term comparisons.

The remainder of this section is organized as follows:

- A. *Overview of El Dorado County Solid Waste Services Franchise Agreements*
- B. *Valuations of Solid Waste Services Franchise Agreement Terms*
- C. *Franchise Agreement Valuation Summary.*

### A. Overview of El Dorado County Solid Waste Services Franchise Agreements

#### 1. Solid Waste Services Franchisees

Solid waste collection franchise areas were first established within portions of the County during the 1950's. In 1971, the County established seven (7) distinct garbage collection areas by County Ordinance. These franchise areas remain in effect today.<sup>1</sup>

---

<sup>1</sup> Source: El Dorado County Environmental Management Department.

Currently the County has entered into exclusive franchise agreements with six solid waste collection companies to provide solid waste collection, transfer, and recycling services for County franchise areas. In addition to the County franchises, the City of Placerville, Cameron Park Community Services District, El Dorado Hills Community Services District, and the City of South Lake Tahoe are under separate, non-County franchises.

The County West Slope areas are served by three companies, including Amador Disposal Service and El Dorado Disposal Services (both subsidiaries of Waste Connection of California), and Sierra Disposal Service (a subsidiary of South Tahoe Refuse Company). The County East Slope areas are also served by three companies, including American River Disposal Service, and South Tahoe Refuse Company (both subsidiaries of South Tahoe Refuse Company), and Tahoe-Truckee Sierra Disposal Company.

El Dorado Disposal Services, serving the majority of the West Slope of the County, has separate franchise agreements to serve the Western unincorporated area of El Dorado County, the City of Placerville, and the El Dorado Hills Community Services District.

County residential refuse service is non-mandatory in majority of County unincorporated areas. While pursuant to County Ordinance No. 4525, Section 8.42.200, refuse service for residents of Cameron Park Community Services District and South Tahoe Refuse Company County franchise area is mandatory; pursuant to County Ordinance No. 2007-01, service within El Dorado Hills Community Services District is mandatory. The City of South Lake Tahoe also requires mandatory subscription to residential solid waste collection services.

Western El Dorado Recovery Systems (WERS), a company with common ownership to El Dorado Disposal Services, provides transfer station/ Materials Recovery Facility (MRF) operations for various customers in the West Slope of the County.

The WERS MRF is located at Diamond Springs, California, an unincorporated area on the West Slope of the County. This facility is the only significant solid waste infrastructure on the West Slope of the County. The MRF serves approximately 75 percent of the County residents and businesses.<sup>2</sup> Nearly all the waste throughput at the MRF operated by WERS is from the El Dorado County jurisdictions. WERS also operates an on-site, certified recycling redemption, household hazardous waste, and electronic waste center.

Current WERS facilities are at the end of their operational life due to their original short-term designation. Without additional capital investment, these facilities likely are not capable of handling the growing demands in the County. El Dorado Disposal Services is planning to relocate its WERS facilities to a location west of Missouri Flat Road. To allow time to recover its multi-million dollar investment, El Dorado Disposal Services has requested a fifteen-year franchise agreement extension (2012 to 2027).<sup>3</sup>

South Tahoe Refuse Transfer Station/MRF, operated by South Tahoe Refuse Company, provides transfer station/MRF operations for customers in the surrounding Lake Tahoe Area on the East Slope of the County. The South Tahoe Refuse Transfer Station/MRF also includes a buy-back center and a free household hazardous waste program for the customers on the East Slope. South Tahoe Refuse Company is now constructing a Resource Recovery Facility, which will provide a dedicated facility to receive clean green waste and inert materials.

## 2. Solid Waste Franchise Terms Summary

We provide a summary of El Dorado County solid waste services franchise agreement terms, in **Table 7-1**, above. Detailed information provided in the table includes franchise effective dates, initial terms, extended terms, optional terms, and final franchise end dates. The initial County franchise terms vary widely by franchise agreement, from 4 years to 10 years. The near-term expirations of current County solid waste

services franchise agreements also vary. One franchise expires in late 2009, some franchises expire in 2012, and other franchises expire in 2014. In addition, some of the agreements include two options to extend an additional one, or five year period, upon satisfying the 50 percent AB 939 diversion goal.

Each of the six franchise companies has a County solid waste services franchise. There also are separate non-County franchises, for the City

of Placerville, Cameron Park Community Services District, El Dorado Hills Community Services District, and the City of South Lake Tahoe. In our franchise agreement valuation analyses, we only focus on the County franchises, and not the non-County franchises.

Solid waste services franchise agreements with El Dorado Disposal Services, which was a subsidiary of USA Waste of California (Waste Management), were assigned to Waste Connections of California in June, 2006, after Waste Connections of California acquired El Dorado Disposal Services from USA Waste of California.

The County franchise agreement with El Dorado Disposal Services, which is the Company with common ownership to Western El Dorado Recovery Systems, expires in December, 2012. El Dorado Disposal Service has recently requested from the County a fifteen-year extension for its franchise agreement for El Dorado County, and they have argued that this is necessary in order to recover their proposed investment in a new WERS facility (west of Missouri Flat Road).

The three County franchise agreements with the South Tahoe Refuse companies already expired on December 31, 2004, and were extended for a five year term for each of them. These three STR companies have requested franchise extensions to 2014.

The County franchise agreement with Amador Disposal Service expires on June 30, 2012, and the County franchise agreement with Tahoe-Truckee Sierra Disposal expires on December 31, 2009. Both of these agreements do not have an optional extension provided.

The County is undertaking this study in advance of these franchise expirations so that the

County will have adequate information to help plan future system alternatives. The County would like to try to understand the value of its franchises to the respective solid waste collection companies.

### **B. Valuations of Solid Waste Services Franchise Agreement Terms**

#### **1. Franchise Agreement Valuation Methodology**

For the solid waste services franchise valuations, we estimated future profitability cash flows. We used a discounted profitability cash flow approach to value County solid waste services franchise agreements to the respective franchise solid waste collection companies. To allow each franchise the same opportunity to accumulate profits, we projected and discounted the profits of these County franchise agreements over the same discounting periods, so that the comparisons of the net present values for each of the franchise agreements are based on the same time frames.

Discounted cash flow analysis applies the concept of the time value of profits. Cash flows were discounted at a six (6) percent rate (risk free), and a twelve (12) percent rate (with risk premium). The discount rates were applied as a proxy for the opportunity cost of capital, or an estimate for the weighted average cost of capital for a hauler company. Perhaps the mostly widely used technique for analyzing a potential investment opportunity or project is the net present value of cash flow approach.

<sup>c</sup> These are all legacy regulated return data, and they are generally not currently used for rate-setting purposes.

## 2. Allowable Profitability Levels

A smaller Operating Ratio represents a higher profitability level allowed for the company. In the County, the Operating Ratios were historically set differently, for the different County areas, according to the West Slope and East Slope County Solid Waste Rate Setting Policies and Procedures Manuals.

In **Table 7-2**, above, we provide a historical allowable profitability level summary for each franchise company, as well as for the WERS MRF. For example, in the West Slope service areas, the allowable Operating Ratio was 90 percent, and in the East Slope service areas, the allowable Operating Ratio was 87 percent to 94.3 percent, a sliding-scale Operating Ratio, depending upon the recycling recovery results of the company. And for the Western El Dorado Recovery Systems Materials Recovery Facility, the allowable

Operating Ratio was 80 percent to 100 percent, also depending upon the recycling recovery results of the MRF.

For consistency, in the allowable profitability projections, we used an Operating Ratio of 90 percent for all companies. However, some companies might achieve a higher profitability level than what we projected based on a smaller Operating Ratio (less than 90 percent) allowed by the County. At the time of this writing, we had no profitability level information for Tahoe-Truckee Sierra Disposal, and Amador Disposal Service.

## 3. Profitability Cash Flow Projections

We obtained, from the County, the most recent available financial statements, rate applications, and/or rate review documents, and other revenue/cost information for each of the six franchise companies. Most documents contained

financial information for fiscal years 2005, 2006, and/or 2007.

We used an average of the actual fiscal year profits obtained from each company's financial statement(s), rate application(s), and/or rate review document(s), as the basis for our profitability projections over a maximum fifteen year time horizon. We applied a 2.7 percent revenue growth rate for all of our profitability projections. This growth rate assumption was a conservative scenario. The companies' future profits could be larger than our profit cash flow estimations, so our projections here tend to be minimum growth scenarios.

For our profitability projections of the County franchise companies, we projected financial profits based on company financial statement income, and allowable profits based on an allowable Operating Ratio (OR). The financial profit projections estimate profits that can be achieved based upon the historical company financial statement income. Financial profits were the actual profits achieved by the company over the fiscal years. The allowable profit projection estimates were the regulated profits that could be achieved based on an allowable Operating Ratio for the company, which is the theoretical maximum profit level allowed by the County. Allowable profits are the maximum theoretical profitability levels, regulated by the County under the franchise agreement, the company could achieve through the solid waste services provided to the County. In most cases, a company's financial profitability should be less than, or equal to the allowable profitability levels. This can be because there may be non-allowable costs included in the company's financial profitability. Financial profits could be either positive or negative, and the allowable profits should be positive.

For both the financial profitability projections, and allowable profitability projections, we estimated the net present values of the franchise

agreement over a fifteen (15) year time horizon, for each of the franchise companies. Detailed calculations are shown in Appendix C. In the exhibits, "actual" represents the profits that we obtained from the company documents; and "projected" presents the profits that we estimated based on certain assumptions, such as profit growth rate, or based on reasonable assumed OR factors. In our financial statement profitability projections, the "actual" profits were obtained from each company's Financial Statement(s) for the available fiscal year(s).

In our allowable profitability projections, the "actual" profits were the "Provision for Profit" obtained from the Company's Rate Review Final Report(s), and/or the Company's Rate Application(s), for the available fiscal year(s), if the company submitted these documents to us. For the rest of the companies that didn't have Rate Applications, and/or Rate Review documents, we used the Total Expenses on the company financial statements as our data source. We then applied a consistent Operating Ratio of 90 percent on Total Expenses to calculate allowable "actual" profits.

Some franchise companies provided services under County franchises, non-County franchises, as well as under federal contracts. Some companies also served other states (e.g., Nevada). For example, El Dorado Disposal Services provided services to four areas in California, which include the Western unincorporated portion of El Dorado County, the City of Placerville, Cameron Park Community Services District, and El Dorado Hills Community Services District. Since we only focused on County franchises in our analyses, we assumed a profit proportion generated under the El Dorado Disposal Services County franchise. Using the Company provided tonnage data for our assumption, we assumed that the profit generated from this company's County franchise was 53 percent of the total, for the Fiscal Year 2007.

---

Then we used this assumed profit proportion to derive the profits generated from the Company's County-franchise, for both financial profitability projections and allowable profitability projections. We used this same profit allocation for Western El Dorado Recovery Systems.

The three subsidiaries of South Tahoe Refuse Company had revenues generated from solid waste services under both County franchises and Federal Forestry Contracts. In addition, South Tahoe Refuse Company served customers under two state franchises, including both California and Nevada, as well as held a non-County franchise with the City of South Lake Tahoe. We used information from the three companies' Financial Statement Schedules of Operating Revenues, and calculated portions for the profits generated from the El Dorado County franchise only. We multiplied the "actual" profits by the respective ratios for both financial profitability projections and allowable profitability projections.

#### **4. Discounted Projected Profitability Cash Flows**

For the projected fifteen-year profitability cash flows, we used discounted profitability cash flow analyses to estimate these net present values of the estimated cash flows, separately for each year in the assumed franchise terms, including the current term, a five year franchise term, a ten year franchise term, and a fifteen year franchise term, for each of the six franchise companies, as well as Western El Dorado Recovery Systems. We applied discounted profitability cash flow analyses to both financial profitability projections and allowable profitability projections.

These assumed franchise terms were arbitrary, and are not provided for by the County franchise agreements. We discounted these profitability cash flows, for the assumed four (current, five, ten, and

fifteen years) franchise terms, to provide the County a general idea of the approximate value of its franchise agreements for the different time periods.

We discounted this cash flow stream to net present values using reasonable discount factors of 6.00 percent and 12.00 percent (e.g., estimates for the company's current borrowing rate/cost of capital or 12 percent for an additional risk premium). To calculate what the net present values of these four assumed franchise terms would be, and to compare to what extend these franchise terms values are different to the different companies, we discounted all profitability cash flows over a same time period, for each of the six franchise companies. All current terms start from year 2008, which is the initial discounting time period  $t_0$  (present time), and future terms were from year 2009 ( $t_1$ ) through year 2022 ( $t_{14}$ ). Thus, we have consistency in terms of the discounting time periods for all of the companies.

For the valuations, since each franchise agreement expires at different times, the years left on the current terms of these agreements are not all the same. For example, the current term, for Amador Disposal Service, is fiscal years 2008, 2009, 2010, 2011, and 2012. The company has approximately five years left on its franchise agreement. The current term, for El Dorado Disposal Services, is fiscal years 2008, 2009, 2010, 2011, and 2012. This company also has approximately five years left on its franchise agreement. For these two companies, the current terms are the same as the five year franchise terms. The current terms, for American River Disposal Service, Sierra Disposal Service, and South Tahoe Refuse Company, are fiscal years 2008, and 2009. These three companies have approximately two years left on their franchise agreements. However, these three companies have requested a franchise extension to 2014 from the County.

Note: Represents only the unincorporated County areas franchised by the County and does not include Cameron Park, El Dorado Hills, or any cities in the County.

\* All terms start from Year 2008.

<sup>a</sup> The assumed franchise periods are arbitrary, and are not provided for the franchise agreements.

<sup>b</sup> The net present values were calculated using a 6.00 percent discount factor.

<sup>c</sup> The current term is for Fiscal Years 2008 and 2009. The company only has approximately two years left on its franchise agreement.

<sup>d</sup> The current term is for Fiscal Years 2008, 2009, 2010, 2011, and 2012. The company has approximately five years left on its franchise agreement.

<sup>e</sup> The projected allowable profits are lower than the projected financial statement profits for all assumed franchise periods, for the Company.

## C. Franchise Agreement Valuation Summary

Discounted net present values for the four assumed franchise agreement terms, including the current term, a five year term, a ten year term, and a fifteen year term, are summarized, in **Table 7-3**, above, and **Table 7-4**, on the next page, for each of the franchise companies. Based on our two scenario projections (either 6 or 12 percent discount rate depending on), each franchise term had a range for its net present value, representing our financial profitability projections and allowable profitability projections.

For most of the franchise companies, the lowest estimated valuation numbers were the net present values of projected financial profits, and the highest estimated valuation numbers were the net present values of projected allowable profits. However, for Amador Disposal Service, American River Disposal Service, and Western El Dorado Recovery Systems, the projected financial profits were larger than the projected allowable profits, which is probably because the allowable profits we used were estimated using the best substitution – the Company Financial Statement Total Expenses, rather than the Total Allowable Operating Expenses, actually included in rate review documents, which were not available to us.

**Table 7-4**

6	El Dorado Disposal Services <sup>d</sup>	\$2,230,506	\$2,603,212	\$2,230,506	\$2,603,212	<b>\$3,676,497</b>	<b>\$4,290,820</b>	\$4,613,903	\$5,384,861
	Western El Dorado Recovery Systems <sup>d,c</sup>	\$4,733,857	\$2,096,362	\$4,733,857	\$2,096,362	<b>\$7,802,718</b>	<b>\$3,455,389</b>	\$9,792,196	\$4,336,419

Note: Represents only the unincorporated County areas franchised by the County and does not include Cameron Park, El Dorado Hills, or any cities in the County.

\* All terms start from Year 2008.

<sup>a</sup> The assumed franchise periods are arbitrary, and are not provided for the franchise agreements.

<sup>b</sup> The net present values were calculated using a 12.00 percent discount factor.

<sup>c</sup> The current term is for Fiscal Years 2008 and 2009. The company only has approximately two years left on its franchise agreement.

<sup>d</sup> The current term is for Fiscal Years 2008, 2009, 2010, 2011, and 2012. The company has approximately five years left on its franchise agreement.

<sup>e</sup> The projected allowable profits are lower than the projected financial statement profits for all assumed franchise periods, for the Company.

Net present values of both projected financial profits, and allowable profits, varied substantially by company. For example, for a ten year franchise term, net present values of the projected financial profits ranged from -\$364,122 to \$9,733,366 (at a 6 percent discount rate). Sierra Disposal Service experienced three-year negative profits for the Fiscal Years 2005, 2006, and 2007, according to the Company's Financial Statements, so the net present values of its financial profitability levels are negative in the valuation, but the company could have positive net present values for its franchise agreement terms based

on the allowable profitability calculation. Net present values for the projected allowable profits ranged from \$178,358 to \$5,352,510 for a ten year franchise term, assuming both discount factors.

Net present values of both projected financial profits and allowable profits increased as the franchise terms increased. A longer term definitely provides a company more time to accumulate its profits as long as it generates positive profits.

For the assumed franchise terms, including a five-year term, a ten-year term, and a fifteen-year

term, we compared the net present values for the different franchise agreements. The current terms, which are different for the different franchise companies, are not directly comparable.

For the financial profitability levels, among the franchise companies, Western El Dorado Recovery Systems had the greatest financial profitability levels, and El Dorado Disposal Services had the second most profitable levels, for all assumed franchise terms.

For the allowable profitability levels, among the franchise companies, El Dorado Disposal Services had the greatest allowable profitability levels, and Western El Dorado Recovery Systems had the second largest profitability level, for all assumed franchise terms.

The net present values of the projected allowable profitability levels are likely the more accurate and meaningful indications for franchise term values. The allowable profitability levels are theoretical

maximum profits the company could achieve under franchises with specifically regulated profitability. The financial profitability levels are profits the company actually made, depending on efficiency and effectiveness of the company's operations.

The franchise agreement valuations, including both profitability projections and discounting profitability cash flows, were based on high level plausible assumptions. However, these valuations may not represent the actual profitability levels these franchise companies will achieve over the respective time horizons, due to uncertainty of various factors that will happen in the future, such as changes in assumptions, franchise regulations, and market conditions.

We caution that these franchise agreement values are only to be used as high level estimates for County planning purposes. These estimates do not represent actual market values of the franchise agreements if they were sold to other parties.

**Section 8**  
**Franchise Agreement Options**  
**for County Solid Waste Services**

## 8. Franchise Agreement Options for County Solid Waste Services

The County's solid waste management franchises are nearing the end of their current franchise terms. **Table 8-1**, on the next page, summarizes franchise end dates for the seven (7) County franchises. Without optional extensions, these seven (7) franchises have between one and one-half year and 4.5 years remaining on their current terms. Also, four (4) of the seven (7) franchises have 1.5 years remaining on their current terms.

The County faces a critical near-term decision, with each of the seven (7) franchisees, as to whether or not to extend these franchises. The end of a franchise term represents a suitable time for the County to consider new services for several reasons:

- Franchisees generally have sufficient experience, providing services to the County, to identify potential new services, or changes to existing services
- The County and franchisees may agree that new, or different, services are needed to increase diversion levels to meet Assembly Bill 939 (AB 939) requirements
- A franchise extension can provide sufficient time for a franchisee to reasonably amortize the costs of new purchases. A franchisee generally will not make major purchases, at the end of a franchise term, due to the limited timeframe to reasonably amortize these capital outlays
- County operating conditions may have changed over the life of the prior franchise term
- Industry norms, or best practices, may have changed over the life of the initial franchise term.

Many jurisdictions will enter into franchise negotiations with their current franchisee. As shown in **Exhibit 8-1**, on page 8-3, a variety of outcomes result from these extension negotiations, with terms based on the specific needs of each jurisdiction. Exhibit 8-1 identifies terms agreed to by 18 jurisdictions that recently negotiated franchise extensions (representing 21 franchise negotiations). The average franchise extension length from this selected survey was nine (9) years.

This section provides the County with information to use in evaluating whether to extend its franchises. The remainder of this section is organized as follows:

- A. *County Franchise Extension Requests*
- B. *Selected Factors to Consider with Franchise Extensions*
- C. *Evaluation of Franchise Options*
- D. *Recommendations for Franchise Extension Negotiations.*

**Table 8-1**  
**Remaining Terms of Current County Franchise Agreements**  
**(Without Optional Franchise Extensions)**

## A. County Franchise Extension Requests

### 1. Waste Connections of California

On January 16, 2008, Waste Connections of California submitted a request to the County to extend its County franchises to 2027. This Waste Connections extension request was made in conjunction with that company’s plan to make the following changes to County operations:

- Relocate the current WERS Materials Recovery Facility (MRF) and transfer station from the current Throwita Way location (in the town of Diamond Springs, California), to a new location on Industrial Way in unincorporated El Dorado County
- Relocate the current maintenance and operations facilities from the current Truck Street location (unincorporated El Dorado County, California) to the new Industrial Way location

- Provide the following capabilities/services at the new Industrial Way facility:
  - An expanded household hazardous waste collection facility
  - A materials “buy back” center
  - Construction and demolition waste sorting
  - Greenwaste consolidation and transfer
  - Municipal waste consolidation and transfer
  - Single stream recyclables sorting
- Construct an office at the new Industrial Way facility (including a bill pay and customer service center)
- Make a multi-million dollar investment (not including land costs) on the new Industrial Way facility.

In conjunction with this new facility development, Waste Connections requested a 15-year extension of its current County franchises to December 31, 2027.

**Exhibit 8-1**

**Terms of Franchise Extensions for Selected Other Jurisdictions**

**Solid Waste Rate and Service Study  
El Dorado County**

No.	Jurisdiction	Population	Year Extension Granted	Term of Extension (yrs.)	Year Franchise Ends (Ended)	Terms of Extension	Franchised Hauler
1	County of Placer*	100,000	2008	7	2009	Implement a universal waste collection program (i.e., household batteries, mercury thermometers, fluorescent lamps, computers, cell phones, television); provide annual household hazardous waste collection events; forego cost of living adjustments in fiscal year 2007/2008 and fiscal year 2014/2015	Auburn Placer Disposal Service
2	Castro Valley Sanitary District	16,000	2008	10	2009	Provide new collection trucks, carts, and new recycling services; upgrade commercial collection services, guarantee disposal at local company-owned landfill for 10 years; implement large rate increases phased in over three years	Waste Management of Alameda County
3	City of Red Bluff	15,000	2007	6	2007	Add liability and insurance requirements to contract; expand recycling program; change annual rate adjustment formula; provide environmental compliance; add liquidated damages; provide free clean up event programs; change franchise fees; provide courtesy collection services; add school recycling; add new requirements for multi-family recycling	Waste Connections
4	City of Concord	115,000	2004	10 (+ 5 year option)	2011	Require relocation of maintenance facility by a certain date; set future franchise fee amounts; provide additional City drop boxes; provide City parks waste disposal at no charge; provide new programs if not meeting AB 939 goals; provide customer service enhancements (e.g., website, online bill pay); change interim year rate formula; cap interim year rate changes at 5 percent	Concord Disposal Service
5	City of Martinez	37,000	2004	2	2012	Reduce cost of new single stream recycling program by extending the term (equipment depreciated over longer term)	Allied Waste Industries, dba Pleasant Hill Bayshore Disposal (PHBD)
6	City of Milpitas	62,700	2004	10	2017	Waive the cost of the street sweeping program for up to 3 years (an approximately \$225,000 annual cost to the General Fund)	Allied Waste Industries, dba Browning Ferris Industries (BFI)

\* In process, pending final agreement language.

## 8. Franchise Agreement Options for County Solid Waste Services

**Table 8-1**  
**Terms of Franchise Extensions for Selected Other Jurisdictions**  
**Solid Waste Rate and Service Study**  
**El Dorado County (continued)**

Page 2 of 3

No.	Jurisdiction	Population	Year Extension Granted	Term of Extension (yrs.)	Year Franchise Ends (Ended)	Terms of Extension	Franchised Hauler
7	Central Contra Costa Solid Waste Authority	Unknown	2004	10	2015	Implement single stream recycling; add minimum diversion tonnage goals; provide food waste pickup with yard waste; add website; specify compensation levels for years 1 and 2 of the contract; require company guarantee of recycling revenues	Valley Waste Management
8	Central Contra Costa Solid Waste Authority	Unknown	2004	10	2015	Establish pre-set tipping fees over the life of the contract. Specify compensation amount for years 1 and 2 of the contract	Allied Waste Industries
9	City of Santa Clarita	177,000	2003	7	2006	Implement immediate rate reduction of \$3.49 per month (held for two years); provide new 90-gallon greenwaste/commingled recycling bins, and plastic bag recycling; increase administrative fees; provide educational brochure to multi-family customers; increase frequency of newsletters; discount school district rates; develop new Materials Recovery Facility (MRF)	Blue Barrell Disposal (residential)/Burtec (commercial)
10	City of Albany	17,000	2003	5 or 10	Unknown	Provide free collection at city parks (\$36,000/yr.), provide green waste bins, increase franchise fees	Waste Management of Alameda County
11	City of Pleasant Hill	32,500	2003	9	2015	Restructure franchise agreement entirely, set up rate setting process, fix residential rates for one year	Allied Waste Industries, dba Pleasant Hill Bayshore Disposal (PHBD)
12	City of Richmond	101,700	2003	22	2025	Increase franchise fee from 2.5 to 5.0 percent of gross revenues. Allow City residents free use of landfill	Republic Waste Services
13	City of Seaside	32,000	2003	5	2015	After basic cart service, allow customer to adjust cart size at no additional charge (available in 32 gallon, 64 gallon, and 96 gallon sizes). Provide optional yard waste service for \$4.50 per month. Allow commercial rate increase of 5.7 percent. Provide bi-monthly neighborhood clean up of six (6) 30 cubic yard debris boxes per event (City to pay disposal costs only). Allow City the option to increase citywide clean ups from existing two (2) per year to four (4) per year (at \$0.50 per customer, per month, additional cost)	Carmel Marina Waste Management

**Table 8-1**  
**Terms of Franchise Extensions for Selected Other Jurisdictions**  
**Solid Waste Rate and Service Study**  
**El Dorado County (continued)**

No.	Jurisdiction	Population	Year Extension Granted	Term of Extension (yrs.)	Year Franchise Ends (Ended)	Terms of Extension	Franchised Hauler
14	City of Stockton	243,000	2003	15 (+5 year option)	2018	Create 10 percent senior rate discount (at age 65, or 6,000 customers); provide free stickers for extra waste pickup, seasonal leaf collection, enhanced neighborhood cleanup with free bins and boxes for target areas; collect televisions, computer monitors, appliances curbside; agree to a best effort requirement to meet 50 percent diversion; place a cap on rate increases; limit interim year adjustments to 50 percent of the CPI and subject to City approval	Stockton Scavenger/Sunrise Sanitation
15	City of Sunnyvale	131,760	2003	7	2018	Change depreciation schedule to 10 years for rolling stock and containers (from 7 years and 5 years, respectively)	Bay Counties Waste Services
16	Pebble Beach Community Services District	4,500	2003	5	2015	Increase rates by 3.5 percent compared to requested 5.1 percent increase, and implement single stream recycling	Carmel Marina Waste Management
17	Santa Clara County	105,200	2003	N/A	2007	No specific new provisions	Los Altos Garbage
18	City of Manhattan Beach	34,000	1998	3	2002	Freeze rate adjustments for 1998 and 1999, with a rate adjustment resuming in 2000. Add a specialized collection vehicle, one that is smaller and quieter, in the downtown area	Waste Management
19	City of Barstow	23,000	1996	5	2012	Waive a \$2.51 increase that was necessary to fund recycling, freeze rates for two years	Desert Disposal Service
20	City of Sunnyvale	131,760	1992	3	2004	Change to OR-based rate setting, purchase new trucks	Bay Counties Waste Services
21	City of Sunnyvale <sup>b</sup>	131,760	1991	10	2001	Reduce rates by 16 percent	Bay Counties Waste Services

<sup>b</sup> Franchise re-bid. All of the other examples in this table were negotiations with franchise holders and were not re-bid.

### 2. South Tahoe Refuse

South Tahoe Refuse has previously requested a franchise extension from the Tahoe Basin JPA. South Tahoe Refuse is currently in the early stages of developing a multi-million dollar Resource Recovery Facility (similar to a MRF) that will focus on long-term green waste recycling adjacent to its current MRF. South Tahoe Refuse is using California Pollution Control Financing Authority (CPCFA) bonds to finance this facility.

### 3. Tahoe Truckee Sierra Disposal

Tahoe Truckee Sierra Disposal has not requested a franchise extension from the County at this time.

## B. Selected Factors to Consider With Franchise Extensions

In this subsection, we discuss the following six (6) factors that the County should consider when evaluating franchise extensions:

- Overall system management plan
- Rate competitiveness
- Service quality
- Willingness to implement new programs or services
- Capabilities to serve County with unique requirements
- Franchise term.

### 1. Overall System Management Plan

The County should take an overall solid waste management system approach when evaluating whether to extend its franchises. The County should align its future solid waste management system goals, with the goals embodied in its franchise agreements. To do otherwise, the County cannot ensure that its franchisees will provide the services the County requires. The County should not

extend its individual franchises until the County can clearly identify and communicate its overall solid waste management system goals.

### 2. Rate Competitiveness

In Sections 2 and 3, we show that current unincorporated County rates compare favorably with the unincorporated areas of fourteen (14) comparative jurisdictions. With the exception of certain industrial rates, unincorporated County rates rank among the lowest in our comparative rate surveys. The County should be motivated to maintain these competitive rates and benchmarks.

### 3. Service Quality

While the County's franchised companies have not recently conducted customer satisfaction surveys (which generally are performed only upon request from the County), we reviewed their most recent available customer complaint logs. We found that a relatively small percentage of residential customers (i.e., less than 0.1 percent each month) reported complaints with their service, as follows:

- *Amador Disposal Service* - 20 complaints over an eight-month period in 2007 (average of 2.5 per month, or 0.1 percent of the 2,005 residential accounts served, per month)
- *El Dorado Disposal Service* - 109 complaints over the twelve-month period in 2007 (average of 9 per month, or less than 0.1 percent of the 13,671 residential accounts served, per month)<sup>1</sup>
- *Three South Tahoe Refuse companies* - 7 complaints over an approximately twelve-month period through March, 2008 (average of 0.6 per month, or significantly less than 0.1 percent of the 10,815 residential customers served, per month).

---

<sup>1</sup> During this same time frame, El Dorado Disposal Services recorded a relatively equal number (106) of customer complements.

---

County staff also has indicated, based on their interactions with County customers, that the current franchised haulers are providing reasonably adequate service. While our understanding of service quality is somewhat limited to customer complaints and anecdotal evidence, it appears that the current franchisees provide quality services. The County should be interested in maintaining these high quality services.

#### **4. Willingness to Implement New Programs or Services**

In the future, the County likely will need to partner with its franchisees to implement new programs or services (e.g., those that increase diversion levels or enhance service effectiveness and efficiency). The County should carefully assess the future willingness of a franchisee to implement needed new programs or services, particularly in response to changing environmental laws and regulations.

In our opinion, the relationship between the County and franchisee should be thought of as a “win-win” long-term partnership, where the two parties have clear and open communications and implementation follow through. In exchange for agreeing to implement new programs and services, the franchisee must be able to recover its costs, and a reasonable profit, associated with these new programs or services.

#### **5. Capabilities to Serve County with Unique Requirements**

The County’s franchisee must be capable of serving a current solid waste management system that is currently complicated by:

- Different service levels and rates throughout the County
- Geographic range and varied terrain
- Non-mandatory collection service

- Projected population growth
- Significant self-haul component
- Urban/rural population mix
- Use of out-of-County disposal facilities for all County waste
- West Slope MRF/transfer station limitations (age, traffic cueing, and throughput)
- Winter weather service constraints.

#### **6. Franchise Term**

Jurisdictions typically provide solid waste management franchise terms of between five (5) and fifteen (15) years, with an average, from our internal survey data, of approximately nine (9) years. In recent years, jurisdictions have tended toward shorter initial franchise terms, with optional extensions.

The County should provide a sufficient franchise term for the franchisee to reasonably recover (i.e., amortize) necessary capital expenditures. For this reason alone, we would not recommend a franchise term less than seven (7) years. Also shorter-term franchises require (1) more frequent re-bidding, (2) transition costs (to new franchisee and County), and (3) equipment replacement costs.

Another component of a franchise agreement is the “optional extension” term, or an extension beyond the primary franchise term. The County has utilized optional extensions in its prior franchise agreements. This optional extension is typically one (1) to five (5) years, and should be only the County’s option.

In some cases, the franchise agreement specifies that a franchisee can request this optional extension. In other cases, the jurisdiction must approve the extension. More often, optional extensions are made subject to jurisdictional approval and based on franchisee performance.

## C. Evaluation of Franchise Options

In this subsection, we assess four (4) options available to the County related to franchise agreements, with its franchised solid waste companies:

1. *Franchise Extension in Conjunction with New Services*
2. *Franchise Extension in Conjunction with County Option to Purchase Contractor Facilities*
3. *No Franchise Extension and Use Competitive Bid Process*
4. *No Franchise Extension and County Provides Refuse Collection Services.*

The County requested that we examine these four options. **Exhibit 8-2**, on the next page, summarizes the pros and cons of each option.

### 1. Franchise Extension in Conjunction with New Services

The County could negotiate new services as a condition of granting a franchise extension. Offsetting the benefits of a franchise extension with new services is a common practice used by many California jurisdictions, particularly when service quality is satisfactory and rates are competitive (see Exhibit 6-1). In general, this is a good option for the County to consider with franchisees that are providing quality services at reasonable rates.

Obviously, County franchisees do not want to risk losing the franchise. County’s franchisees likely will be motivated to negotiate some level of new services, or other “offsets” (e.g., changes to franchise agreement terms and conditions), in conjunction with a franchise extension. Examples of new services the County could negotiate include:

- Customer service enhancements (website, newsletter, online billing)
- Collection at County facilities, at no charge to the County

- Development of new facilities (e.g., MRF/transfer station)
- New on-call pickup services
- New residential and commercial recycling and yard waste programs and new specialized programs such as household hazardous waste.

For this option, the County would need to identify new services it determines are most important and prioritize these for discussion. The County should draft a structured discussion document that describes the new services, quantifies the cost of the services, and addresses the potential rate impacts of the services. The County should then engage in discussions with the franchisees to determine their willingness to implement these new services, and capture their opinions regarding these new services.

The franchisee could agree to provide a new service for “free,” or by internalizing the costs of the new service with no change in rates. Depending on the rate setting methodology, the County may want to explicitly protect the County ratepayer against future rate increases associated with costs of these new “free” services.

The County and franchisee should address how the costs of these new “free” services would be treated over time. For County areas with a formal rate setting methodology (i.e., not CPI-based), costs of the new service could be treated as either:

- A pass through cost, where the franchisee does not earn any profit on the cost but the cost is captured in the rate base. This cost does not increase the profit to the franchisee
- A non-allowable cost, where the franchisee is not allowed to capture the cost in the rate base. This cost is truly “free” to the ratepayer.

**Exhibit 8-2**

**Pros and Cons of Franchise Agreement Options**

**Solid Waste Rate and Service Study  
El Dorado County**

Option	Pros	Cons
<p><b>Franchise Extension in Conjunction with New Services</b></p>	<ul style="list-style-type: none"> <li>■ Allows the County to negotiate terms consistent with its solid waste management goals</li> <li>■ Allows the County to negotiate potentially favorable terms for new services, particularly if the franchisee is highly motivated to extend the franchise</li> <li>■ Provides a means for the County to justify a “sole source” franchise extension, through non-quantifiable and quantifiable offsets, without a competitive procurement</li> <li>■ Reduces administrative costs resulting from re-bidding process</li> </ul>	<ul style="list-style-type: none"> <li>■ In the case where the service is “free,” creates an accounting challenge to track and maintain the ratepayer savings over time (depending on the rate methodology)</li> </ul>
<p><b>Franchise Extension in Conjunction with County Option to Purchase Contractor Facilities</b></p>	<ul style="list-style-type: none"> <li>■ Provides insurance that, should no other facility be available for managing County waste, the County has a facility option</li> <li>■ Allows the County to negotiate potentially favorable terms for this provision, if the franchisee is highly motivated to extend the franchise</li> </ul>	<ul style="list-style-type: none"> <li>■ Provides questionable County value at the end of the franchise (due to likely age of equipment, potential site liabilities, etc.)</li> <li>■ Creates a potential challenge to determine how to value the facility</li> </ul>
<p><b>No Franchise Extension and Use Competitive Bid Process</b></p>	<ul style="list-style-type: none"> <li>■ Allows for the possibility of short-term rate relief, though with this County there appears limited room to reduce existing rates</li> <li>■ Allows the County to end a relationship with a problematic franchisee, if one exists</li> <li>■ Allows the County to seek a best value option in the competitive marketplace</li> </ul>	<ul style="list-style-type: none"> <li>■ Requires expensive two-year Request for Proposal (RFP) process (\$150,000 to \$300,000 for RFP consultant assistance)</li> <li>■ Requires a new set of franchise agreement negotiations</li> <li>■ Creates future service level, and service quality, uncertainty</li> </ul>
<p><b>No Franchise Extension and County Provides Refuse Collection Services</b></p>	<ul style="list-style-type: none"> <li>■ Allows the County to provide services it desires without negotiating terms</li> <li>■ May provide greater transparency of reporting and accounting</li> </ul>	<ul style="list-style-type: none"> <li>■ Requires unique knowledge the County would have to acquire, if currently not an existing competency</li> <li>■ Creates future service level, and service quality, uncertainty</li> <li>■ Creates an additional risk to the County that it can provide competitive solid waste management services.</li> </ul>

Some new services may directly benefit the County (e.g., new diversion related services) and other new services may directly benefit the ratepayer (e.g., new on-call pickup services). The County should recognize this important benefit distinction when evaluating the offsetting impacts of new “free” services.

### **2. Franchise Extension in Conjunction with County Option to Purchase Contractor Facilities**

The County could negotiate a new franchise extension in conjunction with the County’s option to purchase a facility from the franchisee, either when the franchise agreement terminates, or the Contractor sells the business. For example, for this option the County could negotiate the right to either:

- Assume the remaining debt service which the Contractor used to finance the facility
- Buy the facility for the book value of the assets
- Buy the facility based on an independent property valuation
- Buy the facility for some nominal pre-determined transaction amount.

There is some value to this purchase option as it is difficult to cite a new facility in California. Also, the County does not want to be caught without a facility to use, given the timeframes required either to transition to a new franchisee, or to construct a new facility.

Offsetting this potential facility value is the greater likelihood that over time the County may not want ownership of the facility due to factors such as the age of equipment, and potential site cleanup liabilities. In some cases, these facilities can become more of a liability than an asset. When offsetting a franchise extension using a buyout provision alone, the County should be mindful of this undesirable ownership perspective.

Some jurisdictions attempt to assert that the facility is, in effect, owned by the ratepayers as they have paid for the facility through rates charged. We disagree with this characterization, as the franchisee bears all of the risks involved in developing, permitting, owning, and financing the facility (e.g., repaying the debt service). We believe that the County should think of the facility as just another tool to provide the County service (like a truck or a debris box). We believe that the County is hiring the franchisee to provide its service for a fee, irrespective of how the franchisee elects to provide that service.

The County could consider a more compelling facility ownership option. The County, as part of a regional Joint Powers Authority (JPA) could site, construct, and own its own facility. In that case, the County could then hire a contractor to operate the facility. The County, in conjunction with several other neighboring jurisdictions (e.g., City of Placerville and El Dorado Community Services District) could guarantee a larger waste flow as a way to support financing the debt and thus could benefit from some economies of scale in the facility design. Such a JPA could have greater management control over waste diversion efforts and different programs. An example of such a JPA-owned facility in a neighboring community is the Western Placer Waste Management Authority’s Materials Recovery Facility.

### **3. No Franchise Extension and Use Competitive Bid Process**

The County could elect to put the franchise out to competitive bid. This option is typically used by a jurisdiction when it cannot come to terms with a franchisee after negotiations, or the franchisee is simply not meeting the jurisdiction’s expectations.

A competitive bid process requires the minimum of approximately two (2) years to effectively complete. The County must develop a

---

comprehensive bid package, conduct the procurement, analyze the bids, award a contract, negotiate the franchise terms, and allow the new franchisee sufficient lead time to order equipment and plan operations.

A re-bid can provide some rate relief for a jurisdiction with high rates. However, we question to what extent the County could improve upon its already competitive rates, particularly when a new franchisee likely will have to build a transfer station/MRF facility, and transport material for disposal out-of-County.

The potential for short-term rate relief also should not be a singular motivation to re-bid a franchise. When rates are forced down through competitive bidding, a franchisee often will sell or assign the franchise to another entity once they discover that they cannot make a sufficient profit. Where a franchisee does continue to provide service at minimal profit levels, they will be less willing to work with the jurisdiction to add new services or programs.

Jurisdictions also have learned that a single-year low bid result is less meaningful unless the jurisdiction establishes a long-term rate setting process and methodology. A franchisee might “buy the franchise” if it recognizes that it can increase rates over time.

Where a jurisdiction does elect to re-bid a franchise, there are significant costs. For example, consultant costs to help complete a Request for Proposal (RFP) process for a new franchisee can range from \$150,000 to \$300,000, depending on the size and complexity of the procurement. Should the County select a new vendor, there may be some increased costs associated with transitioning to the new company (e.g., purchasing new equipment). Also, service quality can be negatively affected if the new vendor is unfamiliar with the County’s service areas.

#### 4. No Franchise Extension and County Provides Refuse Collection Services

In this option the County would not extend the franchise and would instead perform its own refuse collection services. This option is generally reserved for a jurisdiction that has internal capabilities/knowledge to perform the service, or has some history of experience with refuse collection services.

We show general differences between public and private sector refuse collection providers in **Table 8-2**, on the next page. The County should be aware of these relative differences when deciding to perform refuse collection.

Public sector refuse collection providers can have competitive rates. For example, the County of Sacramento and the City of Sacramento residential rates are comparable to those found in our Section 2 comparative rate survey. However, rates charged by a public sector provider often have “hidden” general fund subsidies which reduce the rates charged by the public sector entity.

Public sector refuse collection providers also provide the following other potential benefits:

- Control of diversion programs
- Local customer service focus and area knowledge
- Increased local employment opportunities.

Most jurisdictions in California have privatized refuse collection services. Of 37 Northern and Central California counties we examined, 35 used private refuse collection services for unincorporated county services, and only two provided their own refuse collection service (most notably Sacramento County).<sup>2</sup>

---

<sup>2</sup> This survey did not include cities in California. There are a number of city run refuse collection providers, including for example the cities of Folsom, Roseville, and Sacramento.

**Table 8-2**  
**Differences Between Public and Private Sector Refuse Collection Providers**  
**Solid Waste Rate and Service Study**  
**El Dorado County**

Description	Public	Private
<b>Profit levels</b>	Not for profit	Regulated profit (average of approximately 90 percent operating ratio, or 11.1 percent return on allowable expenses)
<b>Franchisee fees</b>	None, could be administrative fees. “In lieu” franchise fees are a Proposition 218 ( <i>Right to Vote on Taxes</i> ) issue and are not allowed	Paid to County (average of approximately 10 percent of gross revenues)
<b>Cost of service</b>	Not necessarily fully reflected in rates charged, due to general fund accounting and potential for general fund subsidies	Fully reflected in rates charged, however often cross-subsidies exist between residential and commercial sectors

The County would need to carefully consider whether it can adequately provide:

- Billing/remittance processing
- Customer service
- Labor management
- Maintenance shop repairs
- MRF/transfer facilities
- Trucks, equipment, and carts.

In general, County provision of refuse collection services would expose this County to a host of unnecessary ownership and operation risks.

### D. Recommendations for Franchise Extension Negotiations

As shown in **Exhibit 8-3**, on the following page, each of the four options has different process requirements and impacts on rates, service quality, service levels, and system costs. At this early stage, without initiating discussions with the franchisees, some of these factors are somewhat unknown. From this exhibit, we can however say that compared to the other options, the first option, has a greater likelihood of a positive outcome and this option likely is the least risky for the County.

We would recommend the County take the following steps with its franchisees:

- Prior to negotiating franchise extensions with any of its franchisees, the County should first develop a County solid waste management system plan that clearly identifies:
  - Diversion plans
  - Franchise boundaries
  - Mandatory collection provisions (including self-haul, burn option, etc.)
  - Materials recovery facilities, transfer stations, and disposal facilities (locations)
  - Rate setting process and methodologies
  - Rate structure and rate objectives (e.g., regionalization)
  - Service levels
  - Waste flows.
- Based on the competitive County rates, the overall service quality, and the fact that the franchisees are moving toward more diversion efforts in their proposed facilities, we recommend that the County entertain structured negotiations with each franchisee to assess the willingness of that franchisee to enhance its services to meet County solid waste management planning goals.

**Table 8-3**  
**Overview Assessment of Franchise Agreement Options**  
**Solid Waste Rate and Service Study**  
**El Dorado County**

Option	Process Requirements	Ratepayer Impacts	Quality of Service Impacts	Service Level Impacts	System Cost Impacts
<b>Franchise Extension in Conjunction with New Services</b>	+ (comparatively moderate)	+	Status Quo	+	Status Quo
<b>Franchise Extension in Conjunction with County Option to Purchase Contractor Facilities</b>	+ (comparatively minimal)	Status Quo	Status Quo	Status Quo	Status Quo
<b>No Franchise Extension and Use Competitive Bid Process</b>	- (comparatively extensive)	+ or - Unknown, likely not a long-term reduction based on currently competitive rates	+ or - Short-term service disruptions Unknown, long-term, but based on customer service logs likely not significantly better than existing service quality	+ Likely can better align new franchisee's service levels with County goals	Unknown
<b>No Franchise Extension and County Provides Refuse Collection Services</b>	- (comparatively extensive)	+ or - Unknown, likely not a long-term reduction based on currently competitive rates, and if County provided service rate is fully reflective of cost of service	+ or - Short-term service disruptions Unknown, long-term, but based on customer service logs likely not significantly better than existing service quality	+ Likely can better align County service levels with County goals	Unknown

The County should make this franchise extension discussion process transparent by thoroughly documenting each negotiated term or condition. The County should identify whether each negotiated term or condition is a County benefit, ratepayer benefit, franchisee benefit, or a combination benefit. The County should prepare a record of its negotiations with the franchisee and document results in a report.

The County may want to consider not only new services, but new franchise terms and conditions (e.g., rate setting process and methodology, annual adjustments, annual rate caps, rate freezes, etc.)

- The County should structure future franchises with a base term of nine (9) years,

with three (3), two-year extensions (each with required approval by the County only). In total, this would represent a maximum potential 15-year term (including the three (3), two-year extensions)

- Should the County not come to agreeable terms with any one of its current franchisees, only then do we recommend that the County consider a new formal competitive bid process
- As the County does not currently have internal knowledge, or capabilities, to perform its own refuse collection operations, we recommend at this time that the County not contemplate refuse collection operations and continue to utilize a private sector franchisee for refuse collection.

[This page intentionally left blank.]

**Section 9**  
**Recommendations for**  
**County Solid Waste Management,**  
**Rates, and Service Levels**

## 9. Recommendations for County Solid Waste Management, Rates, and Service Levels

The County is presently faced with a number of complex, and interrelated, substantive solid waste planning and rate setting issues. These issues will affect the County's future ability to manage its overall solid waste system.

Historically, the County's waste management system has worked fairly well, particularly when the County was more rural in nature. Now, the County has grown, and in the future the County will become more urban. However, the County will always retain a rural nature due to its foothill and mountain geography.

The County is presently at a crossroads. The County is bridged between a legacy waste management system that has well served a primarily rural County population, and the need for an updated, or more refined, waste management system to meet the demands of an ever evolving urban/rural population mix, and ever more stringent environmental requirements.

This section of our report provides the County our overall recommendations for the Solid Waste Rate and Service Study. The section is organized as follows:

- A. Key Solid Waste Management Disparities and Recommendations*
- B. Solid Waste Rate, Rate Structure, and Service Level Disparities and Recommendations*
- C. Solid Waste Rate Setting Disparities and Recommendations.*

### **A. Key Solid Waste Management Disparities and Recommendations**

The County faces several dilemmas concerning its short-term, and long-term, solid waste management program. In the short-term, there are the macro waste management issues of County franchises and authorities and mandatory refuse collection for residential services. In the long-term, there are the macro waste management issues of regulated yard waste burning, and the lack of any County solid waste disposal facilities or waste management facilities.

#### **1. County Franchises and Authorities**

There is considerable County complexity in administering its franchises for the three parent companies, and the six subsidiary companies, that currently serve the County. There

is upcoming expiration of the County's solid waste service franchise agreements. One franchise expires in late 2009, some franchises expire in 2012, and finally other franchises expire in 2014.

There are County waste management operational constraints with Western El Dorado Recovery Systems (WERS) Transfer Station/ "Dirty" MRF (i.e., self-haul congestion and operating at permitted capacity).

El Dorado Disposal Services is in the process of developing a new multi-million "clean" Transfer Station and Materials Recovery Facility in unincorporated El Dorado County. This project is currently only at the CEQA study level, and it is still uncertain if the MRF will be developed here due to local "not in my backyard" (NIMBY) issues. El Dorado Disposal Services has submitted their plan to site, and build, this new facility, in conjunction with their request for a fifteen-year franchise extension.

South Tahoe Refuse Company is in the process of developing a new multi-million Resource Recovery Facility adjacent to its existing Transfer Station/MRF in downtown South Lake Tahoe. This new project will focus on green waste and inert recycling. This MRF project has broken ground, with construction actually started.

El Dorado County is a member of the South Lake Tahoe Basin Waste Management Authority (JPA). This JPA is basically an advisory board to the three different government jurisdictions on the East Slope (City of South Lake Tahoe, El Dorado County, and Douglas County, Nevada).

El Dorado County has a Solid Waste Advisory Committee (El Dorado County Solid Waste Advisory Committee (EDSWAC). The Committee is composed of CSD, City, and County members, and their role to the County is advisory only.

There are large "self-haul" volumes in the County. This is partially a reflection of the largely non-mandatory collection situation in the County. Though not known precisely because of the absence of weigh scales throughout much of the County, potentially more than approximately twenty (20) percent of unincorporated County (based on waste tons) in the County could be self-haul.

Given the above complex waste management situation, we recommend that the County carefully negotiate any future franchise extension requests. The County needs to capture additional services and benefits from their refuse haulers in return for any franchise extensions.

There will always be the need to implement new, and additional, waste management programs to increase Assembly Bill 939 (AB 939) diversion levels. A broad range of appropriate diversion discussion items should be part of every new franchise extension request negotiation.

In light of AB 939 State recycling mandates, the County needs to move towards some type of residential recycling program for each of its six residential collection franchise areas. This recycling initiative could be as simple as initially requiring a minimal bag curbside residential recycling program, as part of either any new franchise extension agreement, or any new rate setting agreement. The County also could enhance curbside recycling services by piloting, or phasing in, new full three-cart collection systems, cart-based recycling collection, or cart-based yardwaste collection, in portions of, or all of, a franchisee's service area.

Specifically, we recommend that the County implement a bag curbside residential recycling program for the service areas of American River Disposal Service and South Tahoe Refuse Service. We recognize that many recyclables are likely currently captured at the respective "dirty" MRFs, but we believe that at least having a bag

---

curbside recycling program will help diversion rates (particularly if it is placed outside of the refuse container). In the words of one hauler, “a bag curbside recycling program can help instill a recycling ethic for the children”. The County also should examine whether these two areas might benefit from piloting or phasing in some cart-based curbside recycling in some portions of these two service areas.

We also recommend that formalized franchise areas be established for County areas currently not franchised in the southeast, and southwest, parts of the County. Currently, a non-franchised County hauler (Amador County Environmental Services) is serving some parts of the southeast County.

## **2. “Non-Mandatory” Residential Refuse Collection**

Currently, there is some confusion for some County franchise companies on the East Slope of the County, concerning mandatory residential refuse collection. It would be expected that there would be confusion on this issue given the following situation.

It is our understanding that generally County-wide, in unincorporated areas, residential refuse collection is considered a non-mandatory service. However, for some cities, and Community Service Districts (CSD), within the County (such as the City of South Lake Tahoe, El Dorado Hills CSD, and Cameron Park CSD) residential refuse collection services are mandatory services. On the other hand, for other cities within the County, such as the City of Placerville, residential refuse collection is still non-mandatory, though mandatory residential refuse collection is currently being discussed by the City of Placerville.

The County exception to all of the above descriptions concerning mandatory collection is County Ordinance Number 4525 (Effective July

25, 2000) that created a mandatory collection area for unincorporated areas in the South Lake Tahoe Basin, within El Dorado County, for residential areas served by the franchise area of South Tahoe Refuse Company. The Ordinance provides that if a garbage subscriber fails to pay for mandatory garbage collection service, and a garbage bill has been outstanding for 90 days, or more, a property lien may be placed which constitutes a special assessment on the residence property taxes.

It is not clear if some unincorporated parts of Tahoe-Truckee Sierra Disposal service area are currently being treated as mandatory collection areas, whether or not it is codified, or even enforced. Generally all unincorporated service areas on the East Slope of the Sierra that fall within the pristine “Tahoe Basin” area may defacto be considered areas of mandatory residential refuse collection, again, regardless of whether the requirement is codified, or enforced.

The County needs to now clarify and expand its mandatory residential collection situation with both its franchise haulers, and with other relevant public regulatory entities, on the East Slope of the Sierra. Because of the special environmental status of the Tahoe Basin, we recommend that the County now require, and begin to strictly enforce, mandatory residential refuse collection for unincorporated County areas on the entire East Slope of the County.

This recommendation will require some political will to execute. The County will need to work out numerous details of how to operationally implement and enforce East Slope mandatory collection. Implementation challenges include dealing with issues of a very high proportion of seasonal residents, residential billing methods, snowy winter collection conditions, bears and bear bins, enforcement details, and illegal dumping.

Regardless of the implementation challenges, we believe this recommendation is the right thing to do at this time. We also believe that the County's East Slope franchise haulers will support this recommendation.

We believe that over the long term, mandatory collection will ultimately be necessary throughout the County. Tahoe Basin wide implementation, along with strict enforcement, of mandatory residential collection for the East Slope service areas will be a first step toward achieving long-term mandatory residential refuse collection County-wide.

We recommend the County undertake a formal study of the feasibility and impact of eliminating non-mandatory collection for the West Slope of the County. This study would include addressing issues of self-haul and illegal dumping; the impact of this policy on the need for new transfer stations in some rural parts of the County; and the potential interaction with the yard waste burning option. This study also would examine the impact, for non-mandatory service areas, of converting those customers that subscribe to service to a cart-based system (three cart or cart-based recycling).

### **3. Regulated Yard Waste Burning and Yard Waste Collection**

There is a County Ordinance allowing regulated yard waste burning during certain hours, on certain days, during certain parts of the year. This Ordinance is particularly popular in the more rural portions of the unincorporated County. Long-term, we do not believe that this County-wide ordinance will be sustainable with the increasing stringent air quality regulations from the State of California.

There are exceptions to this County-wide yardwaste burning ordinance, as there is no yard waste burning allowed in the Tahoe Basin. It is

our understanding that Cameron Park CSD only allows two weeks of burning in the spring, and two weeks in the fall. Some current members of the EDSWAC would like to see all burning banned for the County with the exception of large acreage parcels.

The County needs to develop long-term alternatives to yard waste burning for all unincorporated areas. This will require either viable yard waste service for all County residents, or alternatives such as yard waste separation at "dirty" materials recovery facilities, and special pine needle collection programs.

Currently, only El Dorado Disposal Services provides yard waste services. Amador Disposal Services, Sierra Disposal Services, American River Disposal Services, South Tahoe Refuse Company, and Tahoe-Truckee Sierra Disposal all do not provide yard waste services. South Tahoe Refuse Company is in the process of building a new MRF that will focus on yard waste, along with other inert and green waste materials.

Again, it will take considerable political will to deal with the yard waste burning issue in the County. The issue has already been largely addressed in the Tahoe Basin area, and long-term, it will spread to the rest of the County.

We recommend that the County undertake a formal study of the feasibility and impact of eliminating the yard waste burning option for the West Slope of the County. This study would include addressing issues of self-haul and illegal dumping; the impact of this policy on the need for new transfer stations in some rural parts of the County; and the potential initiative interaction with the non-mandatory collection situation.

---

#### 4. Disposal Facilities and Waste Management Facilities

There is County use of four (4) transfer stations/MRFs (two in-County and two out-of-County), and three (3) out-of-County, landfill disposal facilities. There is a lack of any available in-County landfill disposal facilities.

This situation necessitates the 100 percent reliance on out-of-County (including out-of-State) landfill disposal facilities. Currently, County residential refuse ultimately ends up in three (3) other different counties (Sacramento County, San Joaquin County, and Washoe County (Nevada)).

There is difficulty with sitting any new landfills in the County, or using existing, in-County landfills (e.g., Union Mine Landfill). We recommend that the County conduct some long range special planning studies to help address County waste management facility issues.

These special planning analyses could include a study of long-term County landfill strategies and options. This study scope could include the feasibility of: (1) long-term sitting a new landfill in the County, (2) truck long haul of solid waste out-of-State, (3) rail haul of solid waste out-of-County or State, and (4) other disposal options.

In neighboring Sacramento County, the City of Sacramento is currently exploring a high technology gasification plant that would potentially vaporize its City refuse. Sacramento City currently trucks all their residential refuse to the same Nevada landfill (Lockwood) as used by East Slope County haulers.

El Dorado County also does not own or operate any major, or even minor, waste management facilities or locations. We recommend that El Dorado County start to have some direct involvement in terms of ownership and/or control of its waste management facilities, beyond just what is provided by its franchise haulers. For

example, there may be the need to site some new small rural transfer stations in the West Slope areas. This is a potential area where we recommend that the County could take some control.

Another example is there may be the need to ultimately direct (County control) all West Slope materials through a new West Slope transfer station/MRF. There may be the future need to develop a new institutional framework, such as a Joint Powers Authority (JPA), for management of West Slope waste, including El Dorado County and potentially Cameron Park Community Services District, El Dorado Hills Community Services District, and/or the City of Placerville. We recommend that the County study this issue of West Slope solid waste flow control.

A final example, if El Dorado Disposal Services is unsuccessful in sitting its newest proposed transfer station/MRF in the unincorporated County, we recommend the County explore options to have El Dorado Disposal Services locate its new MRF on appropriate County-owned property. County benefits from ownership include long-term facility and operations stability, one-time payment for facility and equipment costs, low cost land, and potentially beneficial facility operating contracts. Neighboring Placer County currently owns the landfill location where Tahoe-Truckee Sierra Disposal has invested in a substantial transfer station/MRF project. Tahoe-Truckee Sierra Disposal runs this facility for Placer County.

\* \* \* \* \*

All of the above key County solid waste management issues may want to ultimately be integrated into a comprehensive County solid waste management plan. This document could be a “living” evolving document used to guide the County in its waste management planning efforts, both short-term and long-term.

## **B. Solid Waste Rate, Rate Structure, and Service Level Disparities and Recommendations**

For residential refuse service, the unincorporated County (i.e., areas other than Cameron Park and El Dorado Hills) has a can system for about two-thirds of the customers. There is some cart service offered only by Amador Disposal Services and El Dorado Disposal Services in the more urban areas.

For curbside recycling services, the County essentially uses a bag system, with some biweekly cart service offered by El Dorado Disposal Services. Again, the County does not have yard waste services except for areas served by El Dorado Disposal Services.

This disparity in residential refuse service levels is largely a function of the urban versus rural disparity in the County's population dispersion, and all the physical operating characteristics implied from this geographic disparity.

There is relatively non-dense, geographic dispersion of County residents with a diverse mix of both urban and rural customers. There are a significant number of hard-to-serve County areas that require unique and specialized equipment (i.e., extra one ton 4x4 trucks). Hard-to-serve characteristics include rural and narrow roads, snow in the winter, and bears and bear bins. Some County haulers are constrained by having to serve customers on non-County maintained roads. Many parts of the County experience harsh winter weather which will always play a challenging role in the delivery of residential solid waste collection services.

All of these diverse and challenging operating characteristics realistically argue for a diverse and appropriate mix of cart-based, and can-based, residential refuse collection systems. A can-based residential refuse collection system may be entirely appropriate in the hard-to-serve rural

portions of the County unincorporated service areas, both now, and in the foreseeable future. This does not mean that the County should remain status quo with its operations and service levels, but rather the County should work with its franchisees to implement thoughtful and incremental service level changes.

A three-cart system may be impractical for the rural and hard-to-serve areas of the County. Some incremental and tactical placement of cart-based services may, however, be possible in areas that are less rural and easier to serve. For all areas of the County (other than EDDS), a substantial rate increase would be required to add a second truck and driver to implement separate yard waste and curbside recycling routes.

There is large variation in residential refuse, curbside recycling, and yard waste collection service levels throughout the County. Much of this variation is entirely justified. Along with this variation in service levels, there is non-uniformity of rates and rate structures throughout the County.

Some unincorporated County areas with lower rates benefit from legacy rate setting practices, different services and service levels, and potentially from larger commercial offsets than other areas (e.g., American River Disposal Service). Some unincorporated County area rates may be larger than others just based on that company's success with submitting rate applications to the County and "pushing through" rate increases. A regionalized rate structure is unlikely for this County in the foreseeable future.

It is important also to recognize that some areas may simply cost more to serve than other areas. For example, in certain County areas, the company has to manually serve the area with specially retrofitted trucks (with limited storage capacity) that transfer material collected throughout the route to a second larger truck waiting nearby.

---

Below we summarize rates, rate structure, and service level disparities for each of the six (6) County franchise haulers, and present our conclusions, as follows:

1. *Amador Disposal Service (ADS)*
2. *El Dorado Disposal Service (EDDS)*
3. *American River Disposal Service (ARDS)*
4. *Sierra Disposal Service (SDS)*
5. *South Tahoe Refuse (STR)*
6. *Tahoe Truckee Sierra Disposal (TTSD)*

### 1. Amador Disposal Service (ADS)

- ADS residents currently select a 32-, 45- or 2, 32 gallon can option, with over 50 percent of these customers being in the 32-gallon service category. While carts are offered, only approximately thirteen (13) percent of ADS area customers have subscribed to a 96-gallon cart service.
- There is very little diversion through the ADS blue bag program and there currently is no curbside yard waste service. With the remote nature of the ADS service area (e.g., rural, hard-to-serve areas), a three-cart system currently is impractical and may not generate much additional diversion for the County.
- **Conclusions:** For some areas, ADS could be modified to a three-cart system at this time, and no structural changes to their rates or rate structure are likely necessary. Some regional public (free) yard waste and/or recycling collection drop boxes could be used to help generate more ADS diversion.

### 2. El Dorado Disposal Service (EDDS)

- EDDS residential rates are higher than unincorporated County averages in part because EDDS areas are the only unincorporated County areas that, in addition to refuse collection, include a formal second route (i.e., a second truck

and driver) that provides every other week curbside recycling and yard waste services.

- Approximately two-thirds of EDDS unincorporated County residential customers are on a three-cart system, and overall diversion for this residential waste stream is high (approaching 50 percent). EDDS could attempt to move the remaining one-third of EDDS unincorporated County residential customers currently on a can-based system, to a cart-based system.
- There is little separation between the EDDS 64-gallon and 96-gallon cart rates (\$1.67 per customer, per month). The County and EDDS may want to, over time, consider increasing the separation between these two cart rates so that there is some price incentive for customers to reduce refuse generation.
- **Conclusions:** EDDS is effectively operating a three-cart system for sixty-six (66) percent of its residential service area. EDDS could convert its remaining one-third of customers to a cart system and it could create better pricing incentives to generate less residential refuse by revising its residential rate structure.

### 3. American River Disposal Service (ARDS)

- All ARDS residents select a 32-, 45- or 2, 32 gallon can option, with nearly 60 percent of ARDS customers in the 32-gallon service area. This suggests that larger carts likely are not necessary here.
- Many of the limited number of ARDS residents are seasonal (summer cabins without winter service), making a three-cart system impractical for the very small number of customers. Also materials are sorted at the STR “dirty” MRF, minimizing the incremental diversion benefit of single stream, cart-based, curbside recycling.

- **Conclusions:** ARDS should not be modified to a three-cart system at this time and no structural changes to their rates or rate structure are likely necessary. To provide a curbside recycling option, ARDS could provide a blue recycling bag outside the can. Some regional public (free) yard waste and/or recycling collection drop boxes also could be used to help generate more ARDS diversion.

### 4. Sierra Disposal Service (SDS)

- SDS has relatively uniform residential rate differences between its 32-gallon, 45-gallon, and 2, 32-gallon can sizes, suggesting customers currently are motivated to select the appropriate can size for their service levels, and there is some pricing incentives to generate less residential refuse.
- SDS has provided customers with a free blue bag, which has resulted in relatively limited diversion to-date.
- SDS rates are higher than average across each residential service level. SDS rates have essentially been adjusted nearly annually since approximately the year 2000 (with a recent approximately eleven (11) percent increase in 2007). This has not necessarily been the case for the other unincorporated County franchise areas.
- **Conclusions:** SDS could possibly benefit from a three-cart system and tiered residential rate structure for only some of its less remote areas.

### 5. South Tahoe Refuse (STR)

- As STR areas are provided unlimited residential can service, and its customers are partially serviced with satellite trucks, a three-cart system is likely operationally impractical. Customers with “bear bins” also could not effectively use a three-cart system. A three-cart system also would require a single stream MRF sort line and

this would require an operational change to the current STR “dirty” MRF.

- At \$23.79 per customer, per month, the unlimited STR residential rate is effectively competitive with the average unincorporated County 2, 32-gallon rate and the 1, 96 gallon rate. This STR rate, however, does not provide any incentives for customers to reduce residential waste generation.
- STR should implement a residential blue bag recycling program for its service areas, with bags separated from the refuse container. In conjunction with this potential initiative, STR could consider a tiered residential rate structure, with rates charged based on the number of cans setout. This new system would result in additional costs to track setouts, account for setouts, and administer the system. It may not be justified it to make this change at this time given STR’s relatively small role in the County waste management system.
- STR commercial bin rates are significantly below unincorporated County averages due to legacy rate setting practices. However, unlike other County areas (with up to 50 percent commercial business) only ten (10) percent of STR customers are commercial customers.
- **Conclusions:** STR should not be modified to a three-cart system, but STR should consider a separate curbside blue bag program, and could consider replacing the unlimited can rate with a tiered residential rate structure.

### 6. Tahoe Truckee Sierra Disposal (TTSD)

- A total of nearly seventy-five (75) percent of all TTSD residents select the 32-gallon can option. Some of these customers use “bear bins” which would not accommodate large carts, and which would largely negate some benefits of a wheeled toter. A cart-based system (with the options of 64-gallon

---

and 96-gallon carts) is unrealistic for TTSD areas. Also, TTSD materials are currently sorted on a “dirty” MRF line at the Eastern Regional MRF, limiting the potential diversion benefits of single stream recycling. With a \$5.55 difference in the 32-gallon and 2, 32-gallon cart sizes, and a separate customer-provide blue bag service (outside the refuse can), there are sufficient TTSD incentives to encourage customers to generate less refuse.

- **Conclusions:** TTSD should not be modified to a three-cart system. Some regional public (free) yard waste and/or recycling collection drop boxes could be used to help generate additional TTSD diversion.

## C. Solid Waste Rate Setting Disparities and Recommendations

The County has a highly disparate rate setting process for all its franchise haulers. The rate setting process has piecemeal evolved due to

legacy rate setting policies, procedures, practices, and County personnel shortages.

**Exhibit 9-1**, on the next page summarizes these highly variable and disparate County rate setting processes. Because of this large variability and inconsistency in County rate setting, it has caused disparities in rate setting for the County’s franchise haulers.

Below we list rate setting policies and practices contained in historical Rate Setting Manuals (no longer in use), County Franchise Agreements, and practically used in recent rate years, for each of the six (6) County Franchise Haulers, and present our recommendations, as follows:

1. *Amador Disposal Service (ADS)*
2. *El Dorado Disposal Service (EDDS)*
3. *American River Disposal Service (ARDS)*
4. *Sierra Disposal Service (SDS)*
5. *South Tahoe Refuse (STR)*
6. *Tahoe Truckee Sierra Disposal (TTSD).*

**Exhibit 9-1**

<sup>6</sup> Section 19 of the Franchise Agreement between STR and the County, dated January 24, 1995.

<sup>7</sup> Section 19 of the Franchise Agreement between TTDS and the County, dated April 4, 1995.

---

## 1. Amador Disposal Service (ADS)

- Historical Rate Setting Methodology – N/A.
- Franchise Agreement Compensation Provisions – Language mentioned on rate setting timing; allowable costs for rate increases; extraordinary circumstances; and specific non-allowable costs. However, no specific language identified on the operating ratio method.
- Recent Rate Setting Practices/Outcomes – Rate applications for CPI increase and fuel surcharge increase submitted for 2006 (approved), 2007 (denied), and 2008 (in process).
- **Recommendations:** ADS rate setting methodology should be based on accounting for ADS allowable costs, pass through costs, and non-allowable costs every four years, and ADS allowable profitability should be determined by using an industry standard allowable ninety (90) percent operating ratio.

## 2. El Dorado Disposal Service (EDDS)

- Historical Rate Setting Methodology – Specific language identified on allowable costs, pass through costs, non-allowable costs, and an operating ratio.
- Franchise Agreement Compensation Provisions – Following 2004 Rate Review results, rates adjusted based on Consumer Price Index, All Items, for the State of California; and fuel specified as an extraordinary cost item. Language mentioned on rate changes. However, no specific language identified on the operating ratio method.
- Recent Rate Setting Practices/Outcomes – Rate applications for CPI increase and fuel surcharge increase submitted for 2006 (approved), 2007 (approved), and 2008 (in process).
- **Recommendations:** EDDS rate setting methodology should be based on accounting for EDDS allowable costs,

pass through costs, and non-allowable costs every four years, and EDDS allowable profitability should be determined by using an industry standard allowable ninety (90) percent operating ratio.

## 3. American River Disposal Service (ARDS)

- Historical Rate Setting Methodology – N/A.
- Franchise Agreement Compensation Provisions – Language mentioned on rate setting timing; allowable costs for rate increases; extraordinary circumstances; and specific non-allowable costs. However, no specific language identified on the operating ratio method.
- Recent Rate Setting Practices/Outcomes – Rate application for CPI increase submitted for 2006 (approved). No rate application submitted for 2007.
- **Recommendations:** ARDS rate setting methodology should be based on accounting for ARDS allowable costs, pass through costs, and non-allowable costs every four years, and ARDS allowable profitability should be determined by using an industry standard allowable ninety (90) percent operating ratio.

## 4. Sierra Disposal Service (SDS)

- Historical Rate Setting Methodology – N/A.
- Franchise Agreement Compensation Provisions – Language mentioned on rate setting timing; allowable costs for rate increases; extraordinary circumstances; and specific non-allowable costs. However, no specific language identified on the operating ratio method.
- Recent Rate Setting Practices/Outcomes – Rate increases allowed for FY 2000 through FY 2006, and Rate Review conducted for FY 2007 using an OR of 90 percent, and a 10.74 percent rate increase recommended (approved).

- **Recommendations:** SDS rate setting methodology should be based on accounting for SDS allowable costs, pass through costs, and non-allowable costs every four years, and SDS allowable profitability should be determined by using an industry standard allowable ninety (90) percent operating ratio.

## 5. South Tahoe Refuse (STR)

- Historical Rate Setting Methodology – Specific language identified on allowable costs, pass through costs, non-allowable costs, and an operating ratio.
- Franchise Agreement Compensation Provisions – Language mentioned on rate setting timing; allowable costs for rate increases; extraordinary circumstances; specific non-allowable costs, and allowable profit determined by the operating ratio method (subject to re-determination beyond July 1, 1999).
- Recent Rate Setting Practices/Outcomes – Rate increase allowed based on COLA and construction of the Resource Recovery Facility for FY 2005, 2006, and 2007. Also, Rate Reviews conducted for FY 2006 and FY 2007, using an OR of 87 percent, and changes to the rate setting process also recommended. Rate application for FY 2008 submitted (pending).
- **Recommendations:** STR rate setting methodology should be based on accounting for STR allowable costs, pass through costs, and non-allowable costs every four years, and STR allowable profitability should be determined by using an industry standard allowable ninety (90) percent operating ratio.

## 6. Tahoe Truckee Sierra Disposal (TTSD)

- Historical Rate Setting Methodology – At one time, TTSD rates were tied to Placer County’s rate setting methodology.

- Franchise Agreement Compensation Provisions – Language mentioned on rate setting timing; specific non-allowable costs; and allowable profit determined by the operating ratio method.
- Recent Rate Setting Practices/Outcomes – Rate application for CPI increase submitted for 2006 (approved). A rate setting methodology request for the County franchise area submitted in 2007.
- **Recommendations:** TTDS rate setting methodology should be based on accounting for TTDS allowable costs, pass through costs, and non-allowable costs every four years, and TTDS allowable profitability should be determined by using an industry standard allowable ninety (90) percent operating ratio.

\* \* \* \* \*

We recommend that the County develop one common rate setting methodology that would be used for all six of its franchise haulers. We recommend that the County develop this methodology, and that the County consistently implement and enforce the methodology.

The recommended common rate setting methodology would be based on accounting for franchise hauler allowable costs, pass through costs, and non-allowable costs every four years. The recommended rate setting methodology would use an industry standard allowable ninety (90) percent operating ratio to determine franchise hauler profitability.

Franchise hauler rates would be reviewed and rebased every four (4) years through a base year rate review process. Through the rate rebase process, solid waste rates could either go up or down. There would be no use of balancing, or “true up,” accounts in this rate setting methodology.

---

For each of the three years between the base years, the franchise haulers would be allowed a predetermined percentage of the CPI, to increase their rates. This percentage of CPI would be applied to the haulers costs or current rates. Also for each of the interim three years, the franchise haulers would be allowed to submit a hardship special rate increase, justifying the need for a special rate increase based on approved conditions.

At the time of initial implementation of the new common rate setting methodology, each franchise hauler's rate structure should be reviewed, and if necessary refined. Some haulers, like STR, should move from the unlimited can service rate to a tiered residential rate structure. Other haulers, like SDS, should move toward a tiered residential rate structure for some of its less remote areas. Some haulers, like EDDS can create better pricing incentives by revising its residential rate structure.

This rate setting methodology recommendation will not be popular with some of the County's franchise haulers who may currently be receiving essentially an automatic annual CPI increase for their solid waste rates. For some other County franchise haulers who have not received regular rate increases, or are confused by the lack of consistency in the current County rate setting process, they may welcome a more structured rate setting process. For example, some County franchise haulers have succeeded in obtaining special fuel surcharges from the County, and others have not.

This new common recommended rate setting methodology could be made a requirement in a future hauler franchise agreement as part of any proposed franchise extension negotiation. This new recommended rate setting methodology could also possibly be made a requirement for any further rate increase application, depending on the details of each hauler's franchise agreement.

[This page intentionally left blank.]

**Appendix A**  
**Comparative Jurisdiction**  
**Solid Waste Rate and**  
**Service Level Surveys**

# Appendix A

## Comparative Jurisdiction Solid Waste Rate and Service Level Surveys

**Appendix A** includes the comparative jurisdiction solid waste rate and service surveys. We surveyed residential, commercial, and industrial rates of fourteen (14) comparative jurisdictions. A list of these comparative jurisdictions is shown in **Exhibit A-1**, on page A-3.

We worked with County staff to agree on the format and content of the comparative surveys. We selected these fourteen comparative jurisdictions based on targeted criteria, such as population, geographic size, unincorporated population, surrounding jurisdictions, and county median income. Thirteen (13) of the fourteen surveyed comparative jurisdictions were a county, and one (1) was a town.

We obtained supporting data, information, and documentation for current rates and service levels from the fourteen comparative jurisdictions, by using a variety of methods, including contacting county/town offices, contacting franchise companies, and reviewing website information. We collected data for the full range of residential, commercial, and industrial services and rates.

**Exhibits A-2** through **A-5**, below, include detailed survey data of residential, commercial, and industrial solid waste rates for the fourteen comparative jurisdictions. Almost all jurisdictions had more than one service area, and several had many service areas. For example, in our residential solid waste collection survey, Calaveras County had nine (9) service areas, Merced County had seven (7) service areas, Monterey County had six (6) service areas, San Luis Obispo County had thirteen (13) service areas, and Stanislaus had four (4) service areas.

In total, we surveyed 552 individual area rates in the comparative jurisdiction surveys. For comparative jurisdiction residential rate and service survey, we surveyed 199 individual area rates, as follows:

- 1, 20-gallon can – 1 rates
- 1, 20-gallon cart – 7 rates
- 1, 32-gallon can – 33 rates
- 1, 32-gallon cart – 21 rates
- 2, 32-gallon cans – 33 rates
- 1, 64-gallon cart – 35 rates
- 3, 32-gallon cans – 32 rates
- 1, 96-gallon cart – 37 rates.

## A. Comparative Jurisdiction Solid Waste Rate and Service Level Surveys

---

For comparative jurisdiction commercial rate and service survey, we surveyed 242 individual area rates, as follows:

- 2-cubic yard 1 time per week – 49 rates
- 2-cubic yard 2 times per week – 44 rates
- 3-cubic yard 1 time per week – 43 rates
- 3-cubic yard 2 times per week – 38 rates
- 4-cubic yard 1 time per week – 38 rates
- 6-cubic yard 1 time per week – 30 rates.

For comparative jurisdiction industrial rate and service survey, we surveyed 82 individual area rates, as follows:

- 20-cubic yard drop box – 42 rates
- 30-cubic yard drop box – 42 rates.

For comparative jurisdiction per ton tipping fee survey, we surveyed 29 individual area rates, as follows:

- Transfer station tipping fee – 19 rates
- Landfill tipping fee – 10 rates.

For residential services, we surveyed 20-, 32-, 64-, and 96-gallon, for both can and cart service levels, as shown in Exhibit A-2, below. For residential curbside recycling and yard waste services, we surveyed service levels, such as container sizes, container types, and collection frequencies, as shown in Exhibit A-3, below. For commercial services, we surveyed the most common 2 cubic yard (1 time per week), 2 cubic yard (2 times per week), 3 cubic yard (1 time per week), 3 cubic yard (2 times per week), 4 cubic yard (1 time per week), and 6 cubic yard (1 time per week) service levels, as shown in Exhibit A-4, below. For industrial services, we surveyed 20 cubic yard, and 30 cubic yard drop box service levels, as shown in Exhibit A-5, below.

Residential, commercial, and industrial rates surveyed are on a per customer, per month basis. Some of the rates were equivalent rates, and in almost all cases, residential refuse rates included recycling and yard waste services, except for the areas, in which no such service was provided.

**Characteristics of Comparative Jurisdictions**  
(As of January 2008)  
**Solid Waste Rate and Service Study**  
**El Dorado County**

No.	Jurisdiction	Characteristics	Service Provider(s)
1	Amador County	Adjacent county	Amador Disposal (Waste Connections), Aces Waste Services
2	Butte County	Similar population	Norcal
3	Calaveras County	Similar geography	Waste Connections, SEI Solid Waste
4	Merced County	Similar population	Waste Management, Gilton Solid Waste Management
5	Monterey County	Similar urban/rural mix	Waste Management
6	Nevada County	Similar population	Waste Management
7	Placer County	Similar population, adjacent county	Auburn Placer Disposal Service, Tahoe-Truckee Sierra Disposal
8	San Luis Obispo County	Similar urban/rural mix, split regional haulers	Mid State Solid Waste and Recycling, Mission Country Disposal, Morro Bay Garbage, Paso Robles Waste Disposal, San Luis Garbage, San Miguel Garbage, South County Sanitary Service
9	Shasta County	Similar climate	Anderson-Cottonwood Disposal Services
10	Stanislaus County	Split regional haulers	Bertolotti Disposal, Gilton Solid Waste Management, Modesto Disposal Service (Waste Mgt.), Turlock Scavenger
11	Sutter County	Neighboring	Norcal (Yuba-Sutter Waste Disposal)
12	Tuolumne County	Neighboring	Cal Sierra/Waste Management, Burns Refuse, Moore Bros
13	Yuba County	Neighboring	Norcal (Yuba-Sutter Waste Disposal)
14	Town of Truckee	Same service provider	Tahoe-Truckee Sierra Disposal

Notes: <sup>a</sup> For the City of Chico. This is the rate for a 7-day rental, and there is an additional fuel charge which varies every month.

<sup>b</sup> Rate does not include the cost of disposal.

<sup>c</sup> The industrial services are performed by many non-franchised haulers.

<sup>d</sup> We included the 20 - 29 CY rate as an equivalent rate for the 20 CY category, and the 30 - 39 CY rate as an equivalent rate for the 30 CY category.

<sup>e</sup> The rate is for a 20 to 40 yard bin. The base rate is \$190.43. There is an additional per ton charge. We assumed an average load of two tons of refuse at \$70.00 per ton.

<sup>f</sup> Rates include first 3 days free rental, \$5.00 per day rental fee after that, and for up to 4 tons. The extra per ton charge beyond 4 tons is \$49.00 per ton.

<sup>g</sup> The base rate is \$125.00 for a 20-cubic yard drop box, and \$148.00 for a 30-cubic yard drop box. We assumed an average load of two tons of refuse at current County tipping fees.

<sup>h</sup> Rates are for a 5-day service.

Average comparative jurisdiction solid waste rates are summarized in **Table 3-1**, **Table 3-8**, and **Table 3-13**, respectively, for residential, commercial, and industrial services, in Section 3. For the fourteen jurisdictions surveyed, average residential solid waste collection rates were \$17.59, \$ 23.99, and \$31.39, respectively, for 1, 32-gallon can, 2, 32-gallon cans, and 3, 32-gallon cans service levels; and \$19.67, \$26.55, and \$33.06, respectively, for 32-, 64-, and 96-gallon cart service levels.

Average commercial solid waste collection rates were \$133.34, \$174.28, \$211.83 and \$293.34, respectively, for the 2-yd (1 per week), 3-yd (1 per week), 4-yd (1 per week), and 6-yd (1 per week) service levels; and \$235.61, and \$312.75, respectively, for the 2-yd (2 per week), and 3-yd (2 per week) service levels.

Average industrial solid waste collection average rates were \$313.83, and \$375.05, respectively, for 20 cubic yard, and 30 cubic yard, drop box service levels.

**Exhibit A-6**, on the next page, summarizes the comparative jurisdiction transfer station and landfill survey results. We surveyed a set of fourteen comparative jurisdictions, the same as our previous solid waste rate and service level surveys. In Exhibit A-6, we show facilities used by each of the surveyed comparative jurisdictions, as well as tipping fees per ton charged for regular refuse transferred into the facilities.

We distinguished tipping fees into two categories, transfer station and landfill. For the fourteen comparative jurisdictions, tipping fees for transfer stations ranged from \$28.00 per ton to \$146.95 per ton, with an absolute difference of \$118.95; and tipping fees for landfills ranged from \$30.00 per ton to \$64.00 per ton, with an absolute difference of \$34.00. Comparative jurisdiction mean tipping fees were \$65.90 per ton, and \$42.13 per ton, respectively, for transfer station, and landfill gate fees.

**Solid Waste Rate**  
**and Service Levels**  
**for Jurisdictions Meeting**  
**AB 939 Diversion Levels**

# Appendix B

## Solid Waste Rate and Service Levels for Jurisdictions Meeting AB 939 Diversion Levels

We identified twelve (12) comparative jurisdictions meeting Assembly Bill 939 (AB 939) diversion levels. Nine of them overlap with the fourteen (14) jurisdictions used in our rate and service level surveys, in Appendix A. The additional three (3) jurisdictions we identified are Solano County, Napa County, and Sonoma County. These twelve jurisdictions exceeded the fifty (50) percent goal in 2006.

A list of the twelve jurisdictions is provided in **Exhibit B-2**, on page B-3, with information for solid waste system characteristics, and service providers. We also provide a California 58 county map, in **Exhibit B-1**, on the next page.

Residential rates and service levels of these comparative jurisdictions are shown in **Exhibit B-3, and Exhibit B-4**, starting on page B-4. We surveyed comparative jurisdiction residential rates, for 20-, 32-, 64-, and 96-gallon, for both can and cart, service levels. For residential curbside recycling and yard waste services, we surveyed service levels, such as container sizes, container types, and collection frequencies. The rates surveyed are on a per customer, per month basis. Some of the rates were equivalent rates, and in almost all cases, residential refuse rates included recycling and yard waste services, except for the areas, in which no such service was provided.

Average residential solid waste rates, for comparative jurisdictions meeting the AB 939 diversion levels, are summarized in Section 4. For the twelve comparable jurisdictions exceeded the AB 939 goal, average residential solid waste rates were \$19.24, \$23.82, and \$29.87, respectively, for 1, 32-gallon can, 2, 32-gallon cans, and 3, 32-gallon cans service levels; and \$20.45, \$29.27, and \$36.78, respectively, for 32-, 64-, and 96-gallon cart service levels.

**Analyses for Franchise Companies**

# Appendix C

## Profitability Projections and Discounted Profitability Cash Flow Analyses for Franchise Companies

**Exhibits C-1** through **C-7**, below, provide the County solid waste services franchise agreement valuation models, based on profitability projections, and discounted profitability cash flow analyses, discussed in Section 7, for each of the companies, including

- Tahoe-Truckee Sierra Disposal
- American River Disposal Service
- Amador Disposal Service
- Sierra Disposal Service
- South Tahoe Refuse Company
- El Dorado Disposal Services
- Western El Dorado Recovery Systems.

Each model reflected the following two scenario profitability projections:

- Financial profitability projection
- Allowable profitability projection.

We obtained from the County recent financial statement(s), rate application(s), and/or rate review document(s), for each of the franchise companies. We worked with the County and companies to identify reasonable assumptions for related factors used in the models.

We estimated fifteen-year time period cash flows for both a financial profitability projection and an allowable profitability projection. We discounted projected profitability cash flows to derive the net present values of different franchise terms, for each of the County franchises.

Net present values of the County franchises, are summarized in Table 7-3 and Table 7-4, in Section 7. We valued four different franchise terms, including the current term, a five year term, a ten year term, and a fifteen year term. For example, for a ten year franchise term (at a 6 percent discount factor), net present values range from -\$364,122 to \$9,733,366 in the financial profitability projection; and range from \$178,358 to \$5,352,510 in the allowable profitability projection.

<b>Projected profit range for 15 year period based on a 6 percent discount rate</b>			<b>\$160,430</b>				–	<b>\$342,409</b>					
<b>Projected profit range for 15 year period based on a 12 percent discount rate</b>			<b>\$115,849</b>				–	<b>\$247,259</b>					

<sup>a</sup> The estimated profit can be achieved based on the Company Financial Statement income.

<sup>b</sup> The estimated profit can be achieved based on an allowable Operating Ratio (OR) for the Company. For this projection for the Company, we used an OR of 90 percent.

<sup>c</sup> We assumed the profit proportion for the Company's County franchise was only 1.5% of the total in year 2006 and 2007, based on the company provided information.

Source:

<sup>d</sup> Tahoe Truckee Disposal Company, Inc. and Placer County Eastern Regional Sanitary Landfill, Inc. Combined Statements of Income and Retained Earnings for the Years Ended December, 2007 and 2006.

<sup>e</sup> The \$12,874 estimated profit was determined by averaging the prior two year profits.

<sup>f</sup> The \$27,478 estimated profit was determined by averaging the prior two year profits.

<sup>g</sup> The growth rate was based on the average historical annual County population growth rate.

<sup>a</sup> The estimated profit that can be achieved based on the Company Financial Statement income.

<sup>b</sup> The estimated profit that can be achieved based on an allowable Operating Ratio (OR) for the Company. For this projection for the Company, we used an OR of 90 percent.

<sup>c</sup> El Dorado Disposal Services provides services to four areas in California, which include the western unincorporated portion of El Dorado County, Cameron Park Community Services District, the City of Placerville and the El Dorado Hills Community Services District. We assumed the profit proportion for the Company's County franchise was 53 percent of the total in year 2007 by using the company provided tonnage data as the basis for the assumption.

<sup>a</sup> The estimated profit that can be achieved based on the Company Financial Statement income.

<sup>b</sup> The estimated profit that can be achieved based on an allowable Operating Ratio (OR) for the Company. For this projection for the Company, we used an OR of 90 percent.

<sup>c</sup> Same as El Dorado Disposal Services valuation, we assumed a 53 percent profit proportion for WERS's County franchise profits in year 2007.

Source:

<sup>d</sup> Western El Dorado Recovery Systems, Inc. Financial Statement for Year Ending December 31, 2007.

<sup>e</sup> The growth rate was based on the average historical annual County population growth rate.
